

# CSAR Service - Management Report

## October 1999

This report documents the quality of the CSAR service during the month of October 1999.

A more comprehensive report is provided quarterly, which additionally covers wider aspects of the Service such as information on Training, Application Support and Value-Added services.

This and other such reports are made available through the Web to staff within EPSRC and the other Research Councils, to CfS staff and CSAR Service users. The reports are indexed in a similar way to that which other useful information and news are listed for selection.

### 1. Introduction

This month has seen the T3E virtually full for the entire month. This has resulted in the service achieving 107% of Baseline capacity.

This document gives information on Service Quality and on actual usage of the CSAR Service during the reporting period of October 1999. The information, in particular, covers the availability and usage of the following two main CSAR Service High Performance Computing (HPC) systems:

- Cray T3E-1200E/576 (Turing)
- SGI Origin2000/16 (Fermat).

The information is provided in both textual and graphical form, so that it is easier to see trends and variances.

### 2. Service Quality

This section covers overall Customer Performance Assessment Ratings (CPARS), HPC System availability and usage, Service Quality Tokens and other information concerning issues, progress and plans for the CSAR Service.

## 2.1 CPARS

Table 1 gives the measure by which the quality of the CSAR Service is judged. It identifies the metrics and performance targets, with colour coding so that different levels of achievement against targets can be readily identified. Unsatisfactory actual performance will trigger corrective action.

### CSAR Service - Service Quality Report - Performance Targets

Service Quality Measure	Performance Targets					
	White	Blue	Green	Yellow	Orange	Red
<b>HPC Services Availability</b>						
Availability in Core Time (% of time)	> 99.9%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Availability out of Core Time (% of time)	> 99.8%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Number of Failures in month	0	1	2 to 3	4	5	> 5
Mean Time between failures in 52 week rolling period (hours)	>750	>500	>300	>200	>150	otherwise
<b>Help Desk</b>						
Non In-depth Queries - Maximum Time to resolve 50% of all queries (working days)	< 1/4	< 1/2	< 1	< 2	< 4	4 or more
Non In-depth Queries - Maximum Time to resolve 95% of all queries (working days)	< 1/2	< 1	< 2	< 3	< 5	5 or more
Administrative Queries - Maximum Time to resolve 95% of all queries (working days)	< 1/2	< 1	< 2	< 3	< 5	5 or more
Help Desk Telephone - % of calls answered within 2 minutes	>98%	> 95%	> 90%	> 85%	> 80%	80% or less
<b>Others</b>						
Normal Media Exchange Requests - average response time in month (working days)	< 1/2	< 1	< 2	< 3	< 5	5 or more
New User Registration Time (working days)	< 1/2	< 1	< 2	< 3	< 4	otherwise
Management Report Delivery Times (working days)	< 1	< 5	< 10	< 12	< 15	otherwise
System Maintenance - no. of scheduled sessions taken per system in the month	0	1	2	3	4	otherwise

**Table 1**

Table 2 gives actual performance information for the period of October 1<sup>st</sup> to 31<sup>st</sup> inclusive. Overall, the CPARS Performance Achievement was satisfactory (see Table 3), i.e. green measured against the CPARS performance targets.

### CSAR Service - Service Quality Report - Actual Performance Achievement

Service Quality Measure	1999									
	Jan	Feb	March	April	May	June	July	Aug.	Sept	Oct
<b>HPC Services Availability</b>										
Availability in Core Time (% of time)	99.70%	100%	100%	97.10%	98.50%	99.70%	99.70%	100%	100%	100%
Availability out of Core Time (% of time)	100%	99.40%	98.51%	98.10%	99.71%	99.40%	99.40%	99.40%	99.5%	100%
Number of Failures in month	1	3	1	1	3	2	2	1	1	0
Mean Time between failures in 52 week rolling period (hours)	744	354	432	480	453	395	391	416	437	486
<b>Help Desk</b>										
Non In-depth Queries - Max Time to resolve 50% of all queries (working days)	<0.25	<0.25	<0.25	<0.25	<0.25	<0.25	<0.25	<0.25	<0.25	<0.25
Non In-depth Queries - Max Time to resolve 95% of all queries (working days)	<1	<2	<2	<1	<3	<3	<2	<2	<1	<3
Administrative Queries - Max Time to resolve 95% of all queries (working days)	<1	<5	<2	<2	<2	<1	<1	<1	<1	<2
Help Desk Telephone - % of calls answered within 2 minutes	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
<b>Others</b>										
Normal Media Exchange Requests - average response time (working days)	<0.5	0	<0.5	<0.5	<0.5	<0.5	0	0	0	0
New User Registration Time (working days)	<2	0	0	0	0	0	0	0	0	0
Management Report Delivery Times (working days)	10	10	10	10	10	10	10	10	10	10
System Maintenance - no. of scheduled sessions taken per system in the month	2	2	2	0	1	2	2	2	1	2

**Table 2**

Notes:

- HPC Services Availability has been calculated using the following formulae, based on the relative NPB performance of Turing and Fermat:  

$$[ \text{Turing availability} \times 122 / (122 + 3.5) ] + [ \text{Fermat availability} \times 3.5 / (122 + 3.5) ]$$
- Mean Time between failures for Service Credits is formally calculated from Go-Live Date.

Table 3 gives Service Credit values for the month of October. These will be accounted on a quarterly basis, formally from the Go-Live Date. The values are calculated according to agreed Service Credit Ratings and Weightings.

**CSAR Service - Service Quality Report - Service Credits**

Service Quality Measure	1999									
	Jan	Feb	March	April	May	June	July	Aug.	Sept	Oct
<b>HPC Services Availability</b>										
Availability in Core Time (% of time)	-0.039	-0.058	-0.058	0.078	0.039	-0.039	-0.039	-0.058	-0.058	-0.058

Monthly Total & overall Service Quality Rating for each period:	-0.08	-0.02	-0.05	0.03	-0.01	-0.03	-0.05	-0.06	-0.08	-0.07

**Table 3**

## 2.2 Service Quality Tokens

The current position at the end of October 1999 is that 2 of the 359 registered users of the CSAR Service had used Service Quality Tokens.

The graph below shows the total number of registered users on the CSAR Service and the number of users holding a neutral view of the service.

The graph below illustrates the monthly usage trend of quality tokens:

The present status is that no black marks are currently showing against the service.

**SUMMARY OF SERVICE QUALITY TOKEN USAGE**

<b>No of Stars or Marks</b>	<b>Consortia</b>	<b>Date Allocated</b>	<b>Reason Given</b>
2 Gold Stars	CSN003 (Fuji)	20/09/99	Fuji improvements
4 Gold Stars	CSN003 (Fuji)	27/08/99	Fuji improvements, good support

The above table summarises the currently allocated Service Quality Tokens, detailing the reason given for the allocation of the tokens.

## 2.3 Throughput Target against Baseline

The Baseline Target for throughput was exceeded this month with the actual figure being 107% of Baseline capacity.

### Job Throughput Against Baseline CSAR Service Provision

Period: 1st to 31st October 1999

	Baseline Capacity for Period (T3E PE Hours)	Actual Usage in Period (T3E PE Hours)	Actual % Utilisation c/w Baseline during Period
1. Has CfS failed to deliver Baseline MPP Computing Capacity for EPSRC?	361,804	388,253	107.31%
2. Have Users submitted work demanding > 110% of the Baseline during period?	361,804	401,009	Job Demand above 110% of Baseline during Period (Yes/No)? No
3. Are there User Jobs outstanding at the end of the period over 4 days old?		Number of Jobs at least 4 days old at end Period 0	Number of Jobs at least 4 days old at end Period is not zero (Yes/No)? No
4. Have Users submitted work demands above 90% of the Baseline during period?		Minimum Job Time Demands as % of Baseline during Period 79%	Minimum Job Time Demand above 90% of Baseline during Period (Yes/No)? No
5. Majority of Job Queues contained jobs from Users for more than 97% during period?	4	Average % of time each queue contained jobs in the Period 87.0%	Average % of time each queue contained jobs in the Period is > 97%? No

### 3. System Availability

Service availability each reporting period is calculated as a percentage of actual availability time over theoretical maximum time, after accounting for planned breaks in service for preventative maintenance.

#### 3.1 Cray T3E-1200E System (Turing)

The following graphs show the availability of Turing both in core time and out of core time respectively during the period of 1<sup>st</sup> to 31<sup>st</sup> October.

Turing availability for October:

Availability of Turing in core time during October was excellent

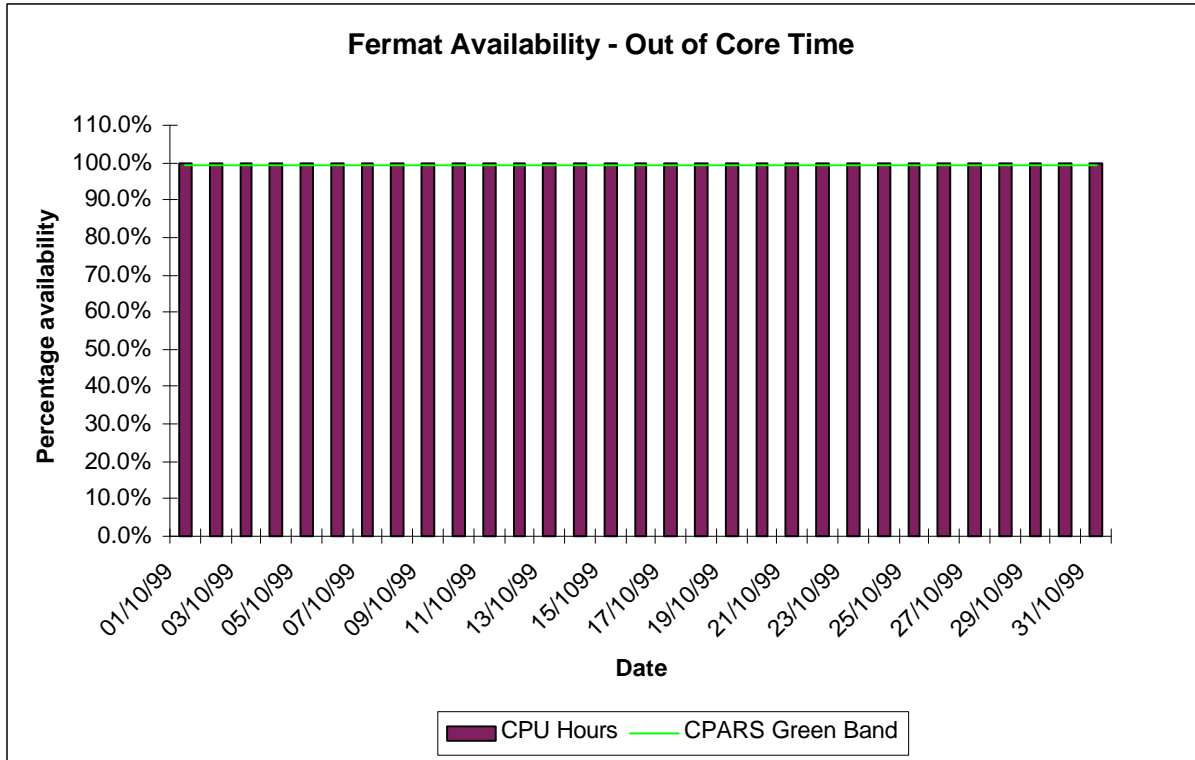

Availability of Turing out of core time during was excellent.

### 3.2 SGI Origin2000 System (Fermat)

The following graphs show the availability of Fermat both in core time and out of core time respectively.

Availability of Fermat in core time during October was excellent.

Availability of Fermat out of core time during October was excellent.

#### 4. HPC Services Usage

Usage information is given in tabular form, in Appendices, and in graphical format. The system usage information for the period of October 1<sup>st</sup> to 31<sup>st</sup> is provided by Project/User Group, totalled by Research Council and overall. This covers:

- CPU usage                      Turing: 388,253 PE Hours                      Fermat: 7,255.22 CPU Hours
- User Disk allocation        Turing: 38.86 GB Years                      Fermat: 19.01 GB Years
- HSM/tape usage              489.31 GB Years

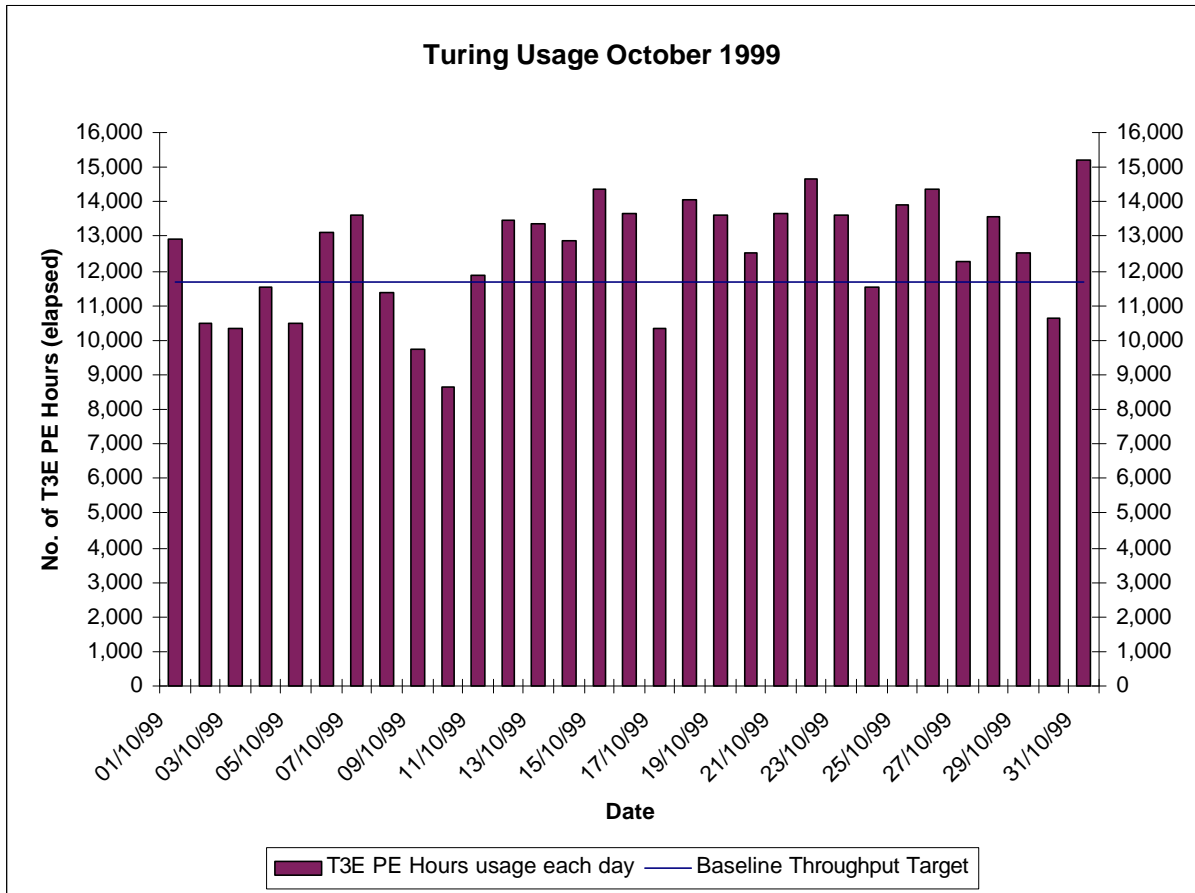

In addition, the following graphs are provided to illustrate usage per month, historically:

- a) MPP (T3E) Usage by month, showing usage each month of CPU (T3E PE Elapsed Hours), split by Research Council and giving the equivalent GFLOP-Years as per NPB. The Baseline Capacity (103 GFLOP-Years) is shown by an overlaid horizontal line.
- b) SMP (Origin) Usage by month, showing usage each month in CPU Hours, split by Research Council and giving the equivalent GFLOP-Years as per NPB. The Baseline Capacity (3.5 GFLOP-Years) is shown by an overlaid horizontal line.
- c) High Performance Disk (T3E) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1 Terabyte) is shown by an overlaid horizontal line.
- d) Medium Performance Disk (Origin) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1.5 Terabytes) is shown by an overlaid horizontal line.
- e) HSM/Tape Usage (T3E) by month, showing the volumes held each in GBytes, split by Research Council. The Baseline Capacity (16 Terabytes) available will be shown by an overlaid horizontal line.

### 4.1 Cray T3E-1200E System (Turing)

The following graph shows the usage of Turing during each day of October 1999. Note that there is some variance on a day-to-day basis as the accounts record job times, and thus CPU usage figures, at the time of job completion which could be the second actual day for large jobs. At present, there is a 12 hour limit on jobs, so that they are check-pointed, and computational time lost due to any failure is well managed.

Turing usage for October:

The above usage graph for the Turing system shows that the overall workload was variable, though increasing.

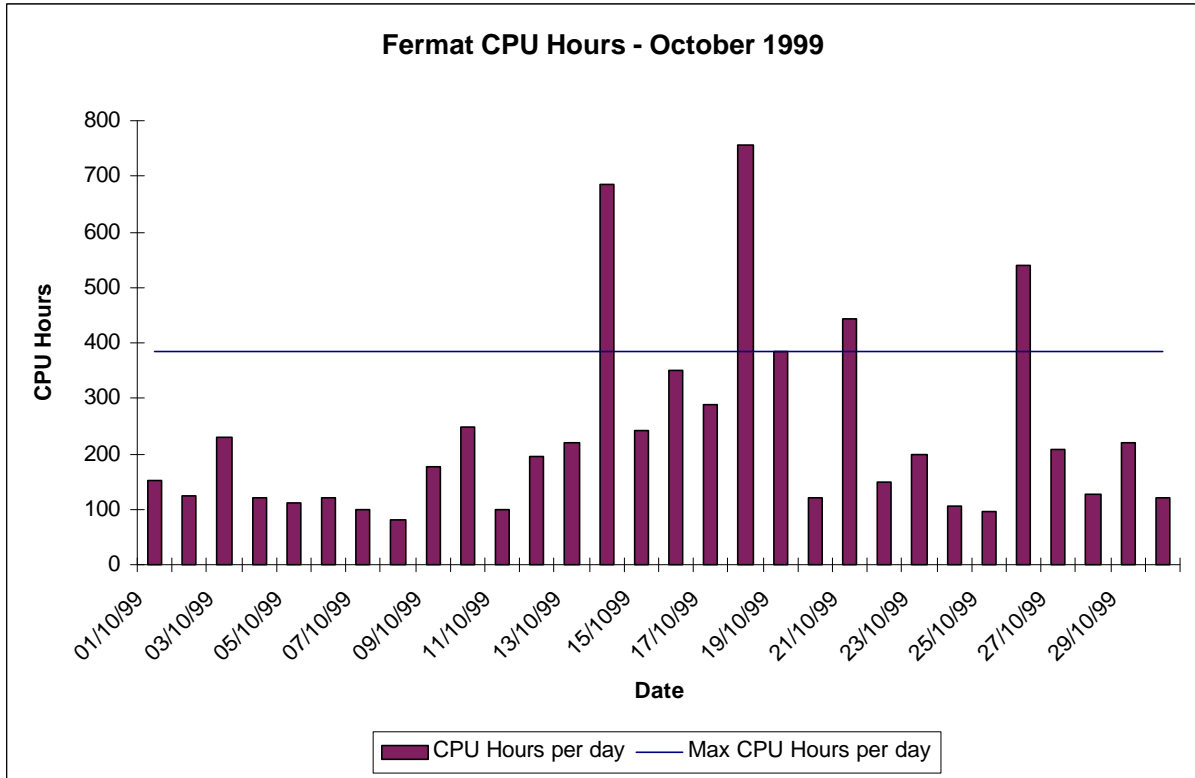

The workload at times reached 95% of maximum theoretical capacity.

Fine tuning of the CfS scheduling system will continue to ensure minimal wasting of PE resource, in order to fit in a number of different sized jobs (e.g. 32, 64, 128, 256) thus facilitating maximised job throughput.

In particular, Turing will continue to start large jobs above 256 PEs, including 512 PEs, every night they are queued.

### 4.2 SGi Origin2000 System (Fermat)

The usage of the Origin system was good for the month with the daily usage of the system averaging 60.9% of theoretical maximum. This figure does not show that in some periods CPU time is running at 99.9% of the total available CPU time. The groups most heavily using the Fermat system are CSE002 (Gillan), CSE30 (Cates) and CS2004 (Watkins) of the class 2 users.

### 4.3 Disk/HSM Usage Charts

The graphs below show current disk and HSM allocations and usage.

The preceding graph shows actual usage on average against the current allocation of disk on the Turing system.

The above graph shows the disk allocations against usage on average of the disk on Fermat.

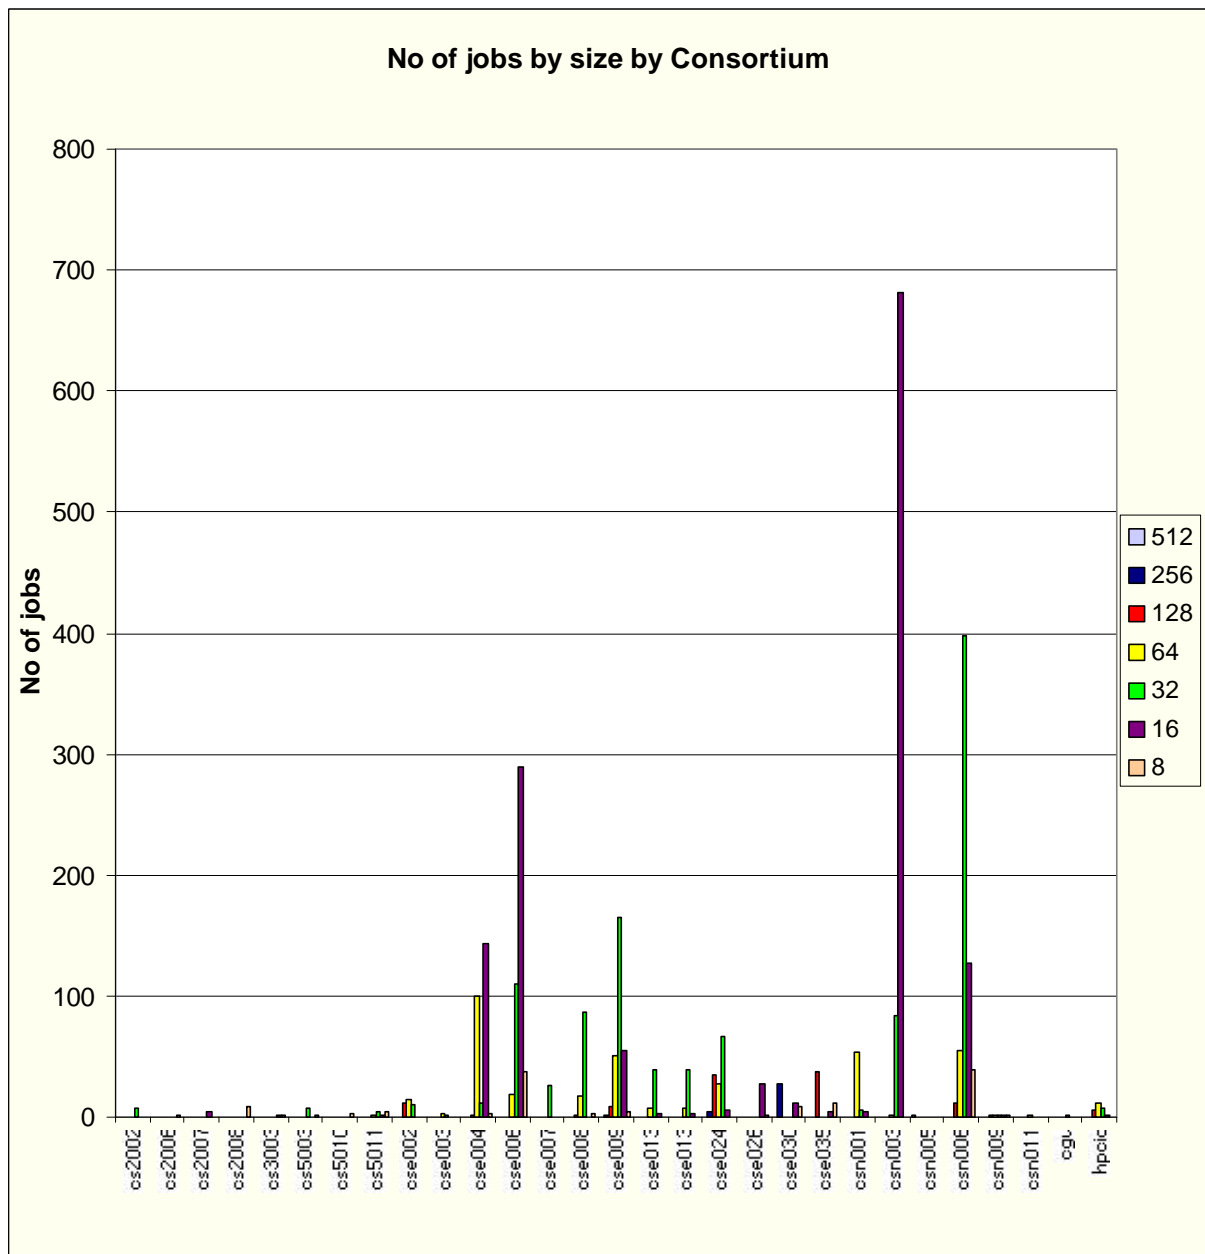

The above graph shows the total usage of the HSM facility by Research Council.

The next two graphs give actual usage of HSM by Research Council and by Consortium.

**CSE002 (Gillan), CSE004 (Sandham), CSE024 (Tennyson), CSN001 (Webb) & CSN003 (O'Neill).**

Job statistics for Turing:

The above graph shows the number of jobs of the major sizes run in the period 1<sup>st</sup> to 31<sup>st</sup> October 1999.

The next graph shows the wait times in minutes for the major categories of jobs.

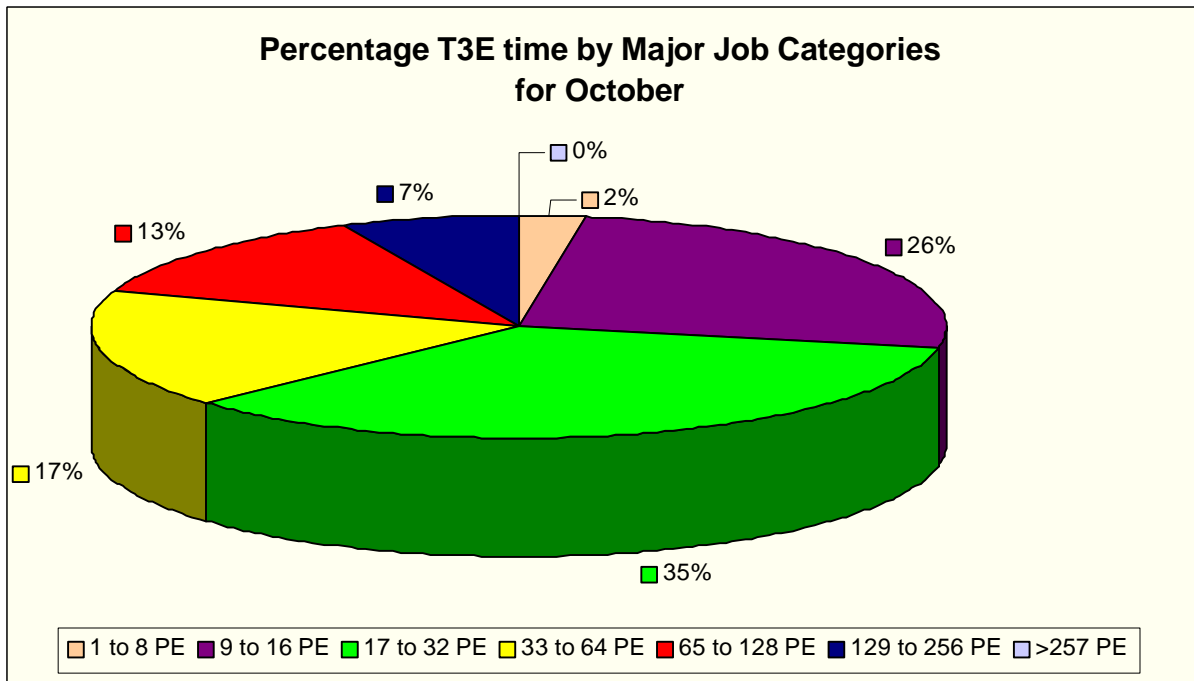

The above chart shows the average wait time trend over the months from January to date.

It can be seen from the above graph that enhancements to the scheduling on Turing have reduced the average wait times however attention must be paid to ensure sufficient head room exists in the system to prevent wait times from rising.

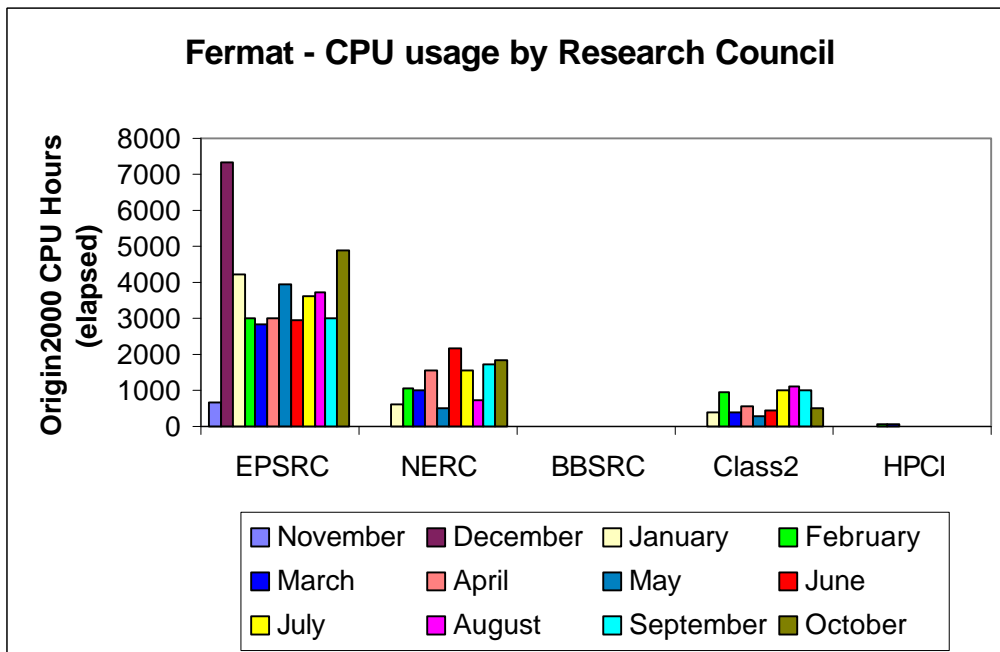

The next graph shows the percentage Turing time utilised by the major job categories for the month.

The above graph demonstrates that the job sizes for the month of October contained relatively few small jobs and no work above 256 PE.

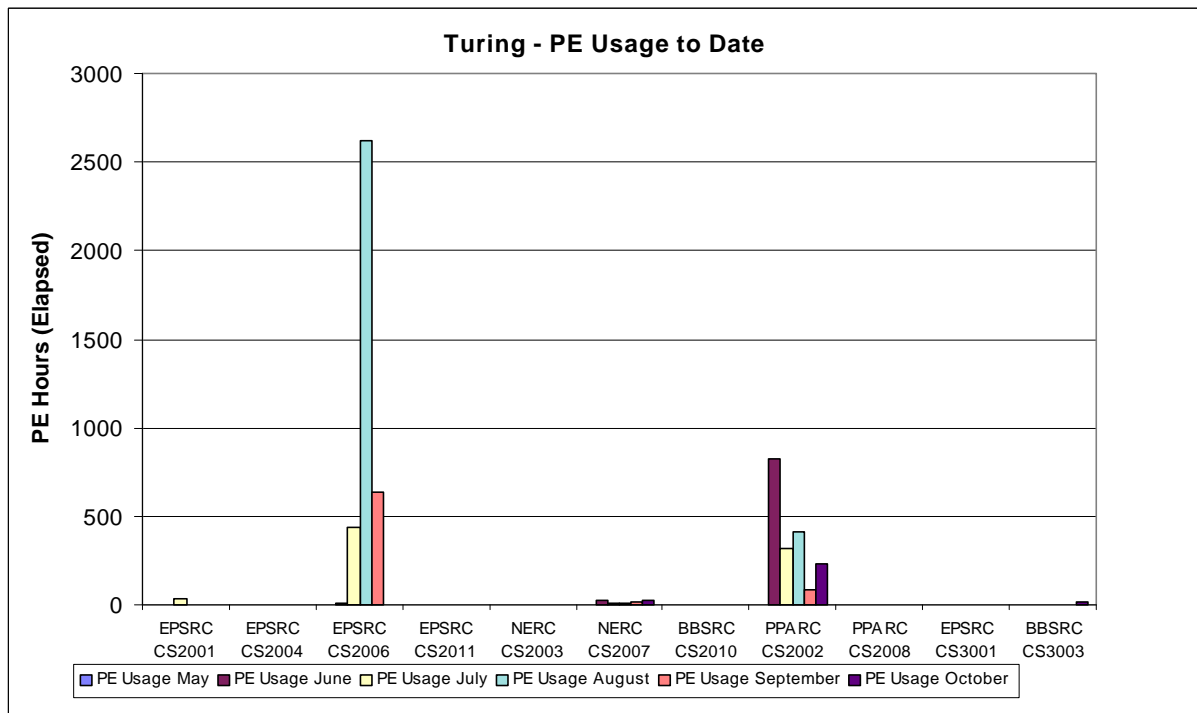

Turing PE usage is shown by Research Council during the months of service to date in the above chart.

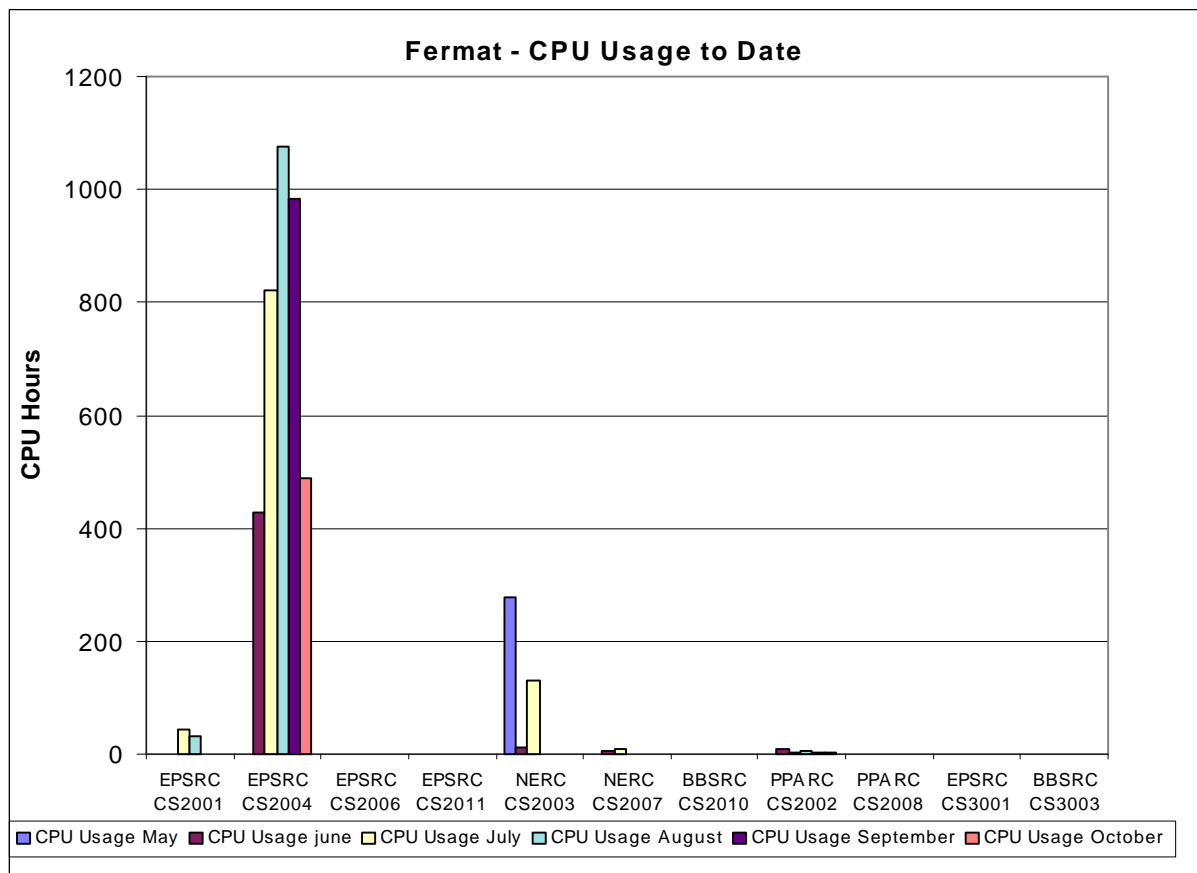

Origin 2000 CPU usage is shown by Research Council during the months of service to date in the above chart.

### 4.4 Class 2 & 3 Usage Charts

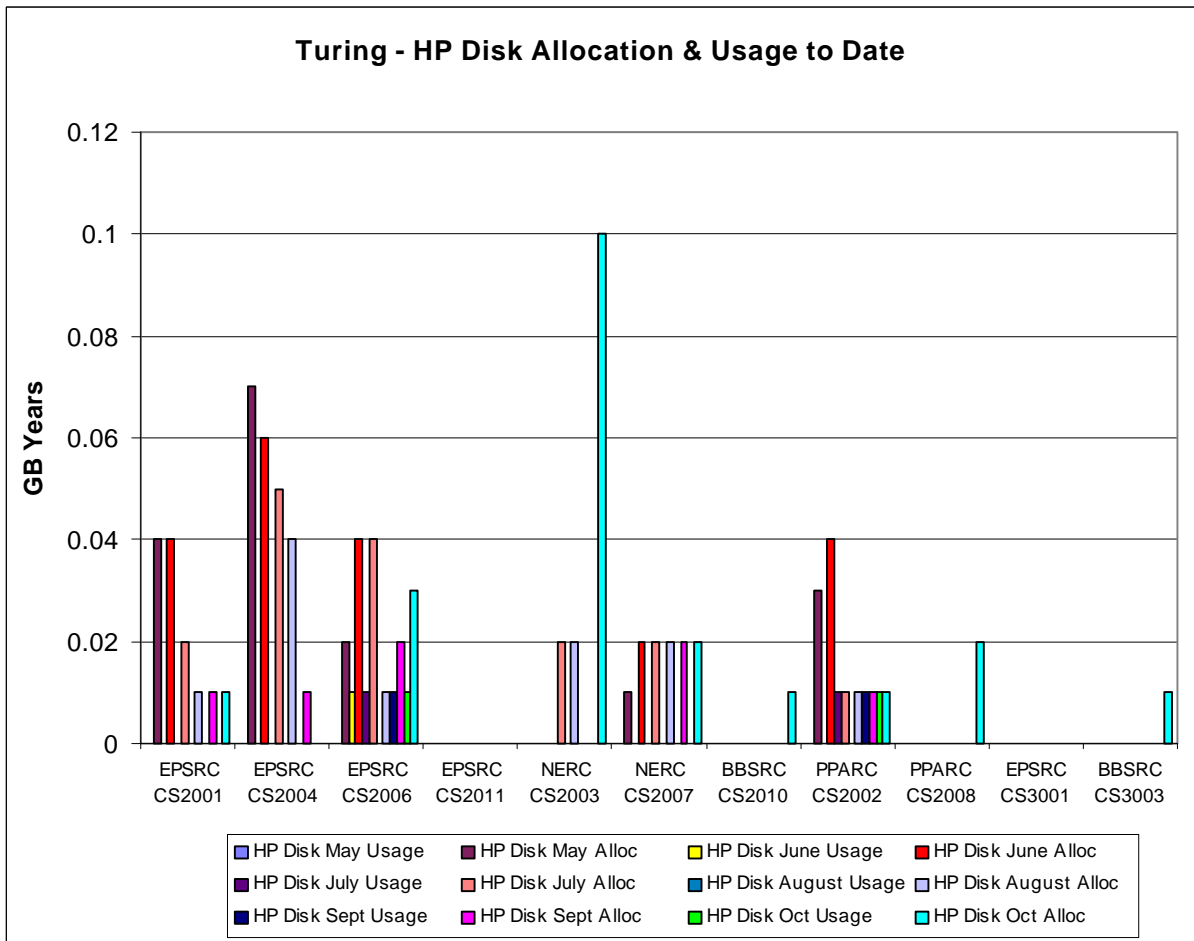

The next series of charts show the usage of the system by the class 2 & class 3 users. The usage is shown by project and identifies the Research Council of the individual projects.

The above chart shows the PE usage of the Turing system.

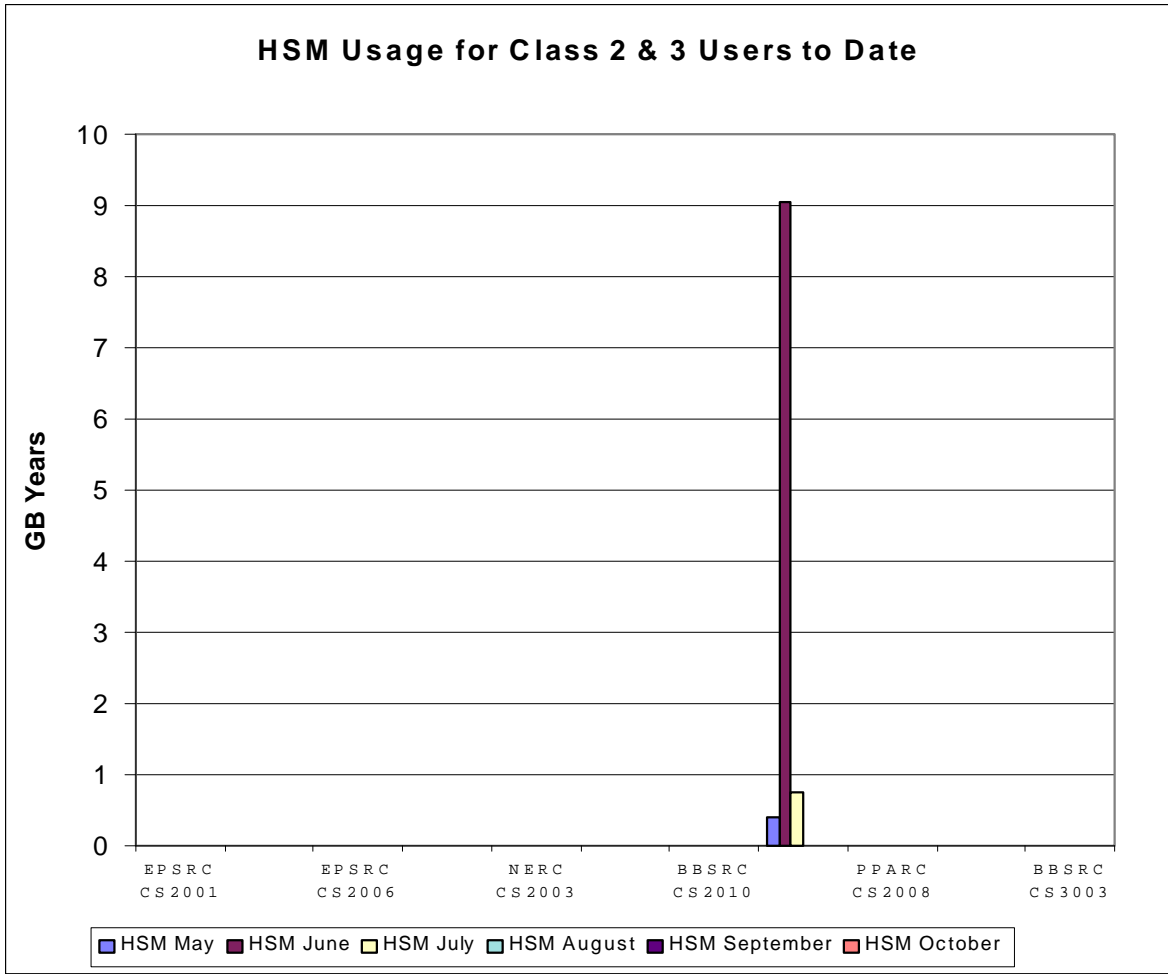

The above chart shows the CPU usage of the Fermat system.

The above chart shows the disk allocations on the Turing system.

The above chart shows the disk allocations on the Fermat system.

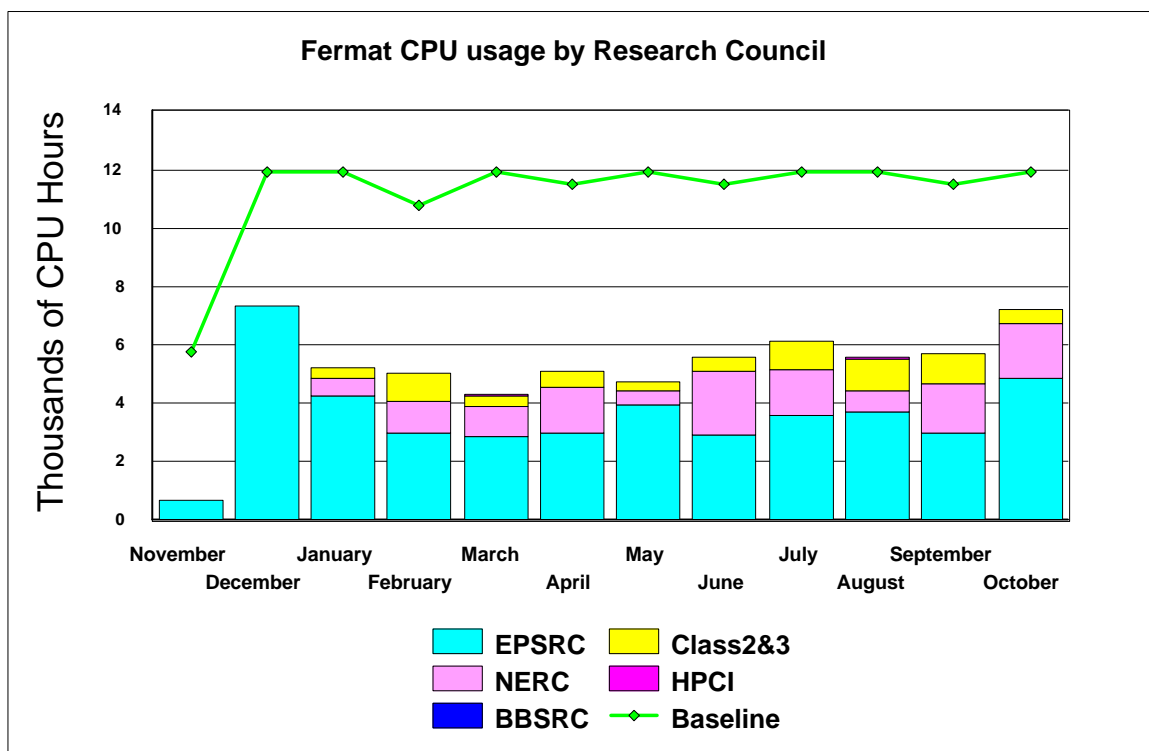

The above chart shows the HSM usage.

In all the Usage Charts, the baseline varies dependant on the number of days in each month, within a 365-day year.

The graph below shows the PE hour's utilisation on Turing by Research Council from November 1998.

The graph below shows the historic CPU usage on Fermat by Research Council from November.

The next series of graphs illustrates the usage of the disk and HSM resources of the system.

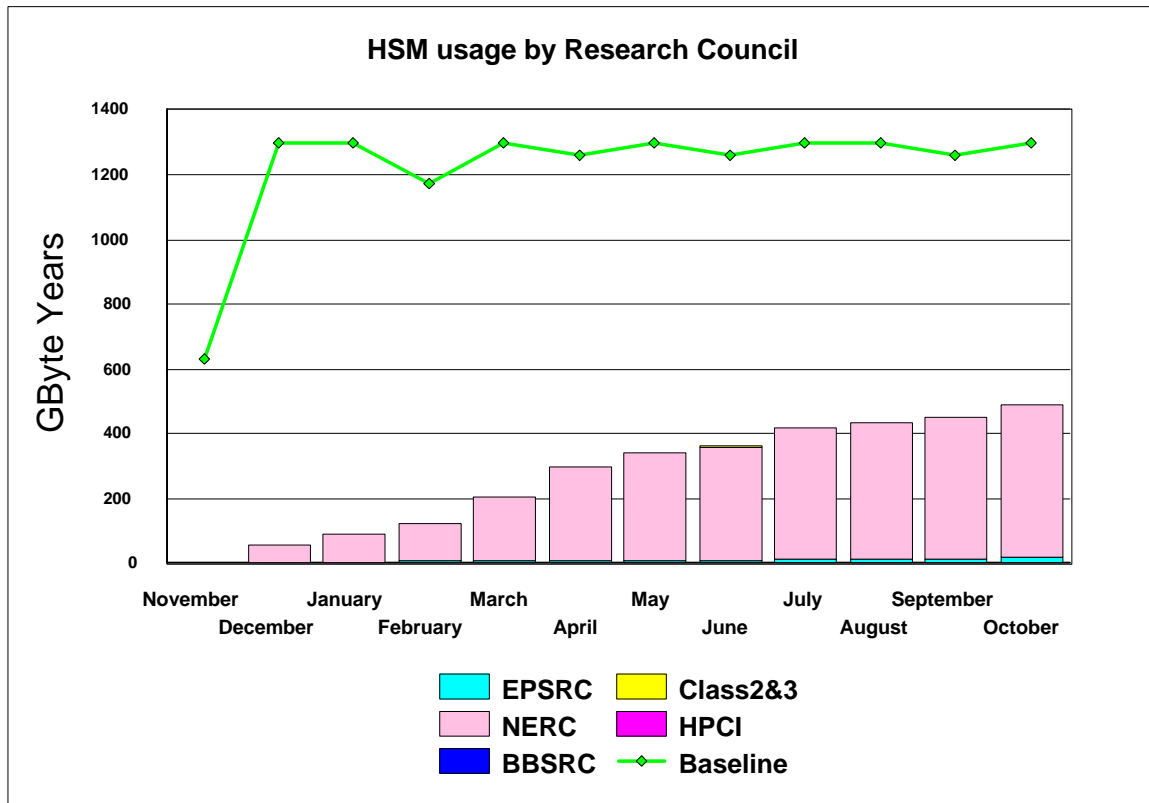

The preceding graph illustrates the historic allocation of the High Performance Disk on Turing.

The graph above illustrates the historic allocation of the Medium Performance Disk on Fermat.

The graph below shows the historic HSM usage by Research Council funded projects. The primary usage is for NERC.

#### 4.5 Guest System Usage Charts

The following graph shows the CPU usage on the current two available CSAR guest systems.

The Fujitsu usage graph above has been reconstructed using the regenerated accounting data as the error has been traced and rectified. It should be noted that the figures do not include the system overheads.

The usage on the CSC J90 guest system was accounted for by NERC, project CSN003 (O'Neill).

## 5. Service Status, Issues and Plans

### 5.1 Status

The usage of the systems is currently on an increasing trend, which has resulted in the usage being 7% over baseline.

A maintenance session was used in-order to prepare for the metacomputer demonstration at the SC99 event in November.

### 5.2 Issues

It is planned to upgrade the OS on the Turing system for the final time this year in November, all further upgrades will be halted until after the Millennium transition.

### 5.3 Plans

The Fujitsu is now fully integrated into the CSAR service and will be included in the CPARS in November's report.

An announcement was made at the CfS Management Board Meeting that the European ASCI prototype machine will be housed at the UOM building and managed by CfS by mid 2000.

## 6. Conclusion

October 1999 saw the overall CPARS rating at green, with the Baseline Capacity for job throughput being exceeded by 7%.

Continued management attention will be given to maximise the throughput of the Service, whilst balancing as fairly as practicable the shares between Projects and jobs of the varying sizes.

**Appendix 1** contains the accounts for October 1999

**Appendix 2** contains the Percentage shares by Consortium for October 1999

**Appendix 3** contains the Percentage shares by Research Council for October 1999

**Appendix 4** contains the Training and support figures to the end of October 1999

**Appendix 5** contains a reference table of the consortia name, the subject area and the PI name.
