

CSAR Service - Management Report

October 2001

This report documents the quality of the CSAR service during the month of October 2001.

A more comprehensive report is provided quarterly, which additionally covers wider aspects of the Service such as information on Training, Application Support and Value-Added services.

This and other such reports are made available through the Web to staff within EPSRC and the other Research Councils, to CfS staff and CSAR Service users. The reports are indexed in a similar way to that which other useful information and news are listed for selection.

1. Introduction

This document gives information on Service Quality and on actual usage of the CSAR Service during the reporting period of October 2001. The information, in particular, covers the availability and usage of the following three main CSAR Service High Performance Computing (HPC) systems:

- Cray T3E-1200E/776 (Turing)
- SGI Origin2000/128 (Fermat)
- SGI Origin3000/512 (Green)

The information is provided in both textual and graphical form, so that it is easier to see trends and variances.

October has seen the workload of the three primary systems remaining high.

The percentage of Turing CPU capacity used by jobs larger than 64 PEs was 80%.

October also saw the utilisation on the Origin 3000 (Green) climbing, and the percentage of Green CPU capacity used by jobs larger than 64 PEs was 61%.

2. Service Quality

This section covers overall Customer Performance Assessment Ratings (CPARS), HPC System availability and usage, Service Quality Tokens and other information concerning issues, progress and plans for the CSAR Service.

2.1 CPARS

Table 1 gives the measure by which the quality of the CSAR Service is judged. It identifies the metrics and performance targets, with colour coding so that different levels of achievement against targets can be readily identified. Unsatisfactory actual performance will trigger corrective action.

CSAR Service - Service Quality Report - Performance Targets

Service Quality Measure	Performance Targets					
	White	Blue	Green	Yellow	Orange	Red
HPC Services Availability						
Availability in Core Time (% of time)	> 99.9%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Availability out of Core Time (% of time)	> 99.8%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Number of Failures in month	0	1	2 to 3	4	5	> 5
Mean Time between failures in 52 week rolling period (hours)	>750	>500	>300	>200	>150	otherwise
Fujitsu Service Availability						
Availability in Core Time (% of time)	> 99.9%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Availability out of Core Time (% of time)	> 99.8%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Help Desk						
Non In-depth Queries - Max Time to resolve 50% of all queries	< 1/4	< 1/2	< 1	< 2	< 4	4 or more
Non In-depth Queries - Max Time to resolve 95% of all queries	< 1/2	< 1	< 2	< 3	< 5	5 or more
Administrative Queries - Max Time to resolve 95% of all queries	< 1/2	< 1	< 2	< 3	< 5	5 or more
Help Desk Telephone - % of calls answered within 2 minutes	>98%	> 95%	> 90%	> 85%	> 80%	80% or less
Others						
Normal Media Exchange Requests - average response time	< 1/2	< 1	< 2	< 3	< 5	5 or more
New User Registration Time (working days)	< 1/2	< 1	< 2	< 3	< 4	otherwise
Management Report Delivery Times (working days)	< 1	< 5	< 10	< 12	< 15	otherwise
System Maintenance - no. of sessions taken per system in the month	0	1	2	3	4	otherwise

Table 1

Table 2 gives actual performance information for the period of October 1st to 31st inclusive.

Overall, the CPARS Performance Achievement in October was satisfactory (see Table 3); i.e. Green measured against the CPARS performance targets.

The Fujitsu availability figures are included in Table 2, but not Table 3 as they have zero weighting in CPARS terms.

CSAR Service - Service Quality Report - Actual Performance Achievement

Service Quality Measure	2000/1											
	Nov	Dec	Jan	Feb	March	April	May	June	July	Aug	Sept	Oct
HPC Services Availability

System Maintenance - no. of sessions taken per system in the month	2	1	0	2	1	1	0	0	1	2	2	2

Table 2

Notes:

- HPC Services Availability has been calculated using the following formulae, based on the relative NPB performance of Turing and Fermat at installation:

$$[\text{Turing availability} \times 122 / (122 + 3.5)] + [\text{Fermat availability} \times 3.5 / (122 + 3.5) \times 1.556]$$
- Mean Time between failures for Service Credits is formally calculated based on a rolling 12 month period.

Table 3 gives Service Credit values for the month of October. These will be accounted on a quarterly basis, formally from the Go-Live Date. The values are calculated according to agreed Service Credit Ratings and Weightings.

CSAR Service - Service Quality Report - Service Credit Ratings

Table 3

2.2 Service Quality Tokens

The current position at the end of October 2001 is that one of the 528 registered users of the CSAR Service had registered a black mark against the service, one had registered two black marks, and two had registered three black marks.

The graph above shows the total number of registered users on the CSAR Service and the number of users holding a neutral view of the service.

The graph below illustrates the monthly usage trend of quality tokens:

The current status of the Stendahl tokens is that 4 users had allocated black marks against the system for the problems shown in the table below.

SUMMARY OF SERVICE QUALITY TOKEN USAGE			
No of Stars or Marks	Consortia	Date Allocated	Reason Given
3 Black Marks	csn001	17/10/01	Problems with /hold
3 Black Marks	cse085	12/10/01	CPU time for a job not constant
2 Black Marks	cse085	05/10/01	Green was unreliable recently
1 Black Mark	cse006	25/09/01	Login problems continuing

2.3 Throughput Target against Baseline

The Baseline Target for throughput was fully achieved this month due to plenty of work over the period. The actual usage figure was 155% of Baseline capacity.

Job Throughput Against Baseline CSAR Service Provision

Period: 1st to 31st October 2001

1. Has CfS failed to deliver Baseline MPP Computing Capacity for EPSRC?	Baseline Capacity for Period (T3E PE Hours) 359,450	Actual Usage in Period (T3E PE Hours) 560,464	Actual % Utilisation c/w Baseline during Period 155.92%
2. Have Users submitted work demanding > 110% of the Baseline during period?	Baseline Capacity for Period (T3E PE Hours) 359,450	Job Time Demands in Period 576,769	Job Demand above 110% of Baseline during Period (Yes/No)? Yes
3. Are there User Jobs outstanding at the end of the period over 4 days old?		Number of Jobs at least 4 days old at end Period 6	Number of Jobs at least 4 days old at end Period is not zero (Yes/No)? Yes
4. Have Users submitted work demands above 90% of the Baseline during period?		Minimum Job Time Demands as % of Baseline during Period 81%	Minimum Job Time Demand above 90% of Baseline during Period (Yes/No)? Yes
5. Majority of Job Queues contained jobs from Users for more than 97% during period?	Number of standard Job Queues (ignoring priorities) 4	Average % of time each queue contained jobs in the Period 59.0%	Average % of time each queue contained jobs in the Period is > 97%? No

3. System Availability

Service availability each reporting period is calculated as a percentage of actual availability time over theoretical maximum time, after accounting for planned breaks in service for preventative maintenance.

3.1 Cray T3E-1200E System (Turing)

The following graphs show the availability of Turing both in core time and out of core time respectively during the period of 1st to 31st October.

Turing availability for October:

Availability of Turing in core time during October was good with the exception of an unscheduled re-boot on the 17th of the month for an as yet undetermined problem.

Availability of Turing out of core time during October was excellent.

3.2 SGI Origin2000 System (Fermat)

The following graphs show the availability of Fermat both in core time and out of core time respectively.

Availability of Fermat in core time during October was good with the exception of periods of unscheduled downtime on both the 9th, 16th & 31st of the month all for unscheduled reboots.

Availability of Fermat out of core time during October was excellent.

4. HPC Services Usage

Usage information is given in tabular form, in Appendices, and in graphical format. The system usage information for the period of October 1st to 30th, is provided by Project/User Group, totalled by Research Council and overall. This covers:

- CPU usage Turing: 560,464 PE Hours Fermat (Batch): 34,421 Hours
- Fermat (Interactive): 1,432 CPU Hours
- Green: 135,727 Hours
- Fujitsu CPU usage Fuji: 2,770 CPU Hours
- User Disk allocation Turing: 76.81 GB Years Fermat: 62.97 GB Years
- HSM/tape usage 1,342.69 GB Years

In addition, the following graphs are provided to illustrate usage per month, historically:

- a) MPP (T3E/Origin) Usage by month, showing usage each month of CPU (MFOP Years as per NPB), split by Research Council and by system. The Baseline and the overall Capacity are shown by overlaid horizontal lines.
- b) SMP (Origin) Usage by month, showing usage each month in CPU Hours, split by Research Council and giving the equivalent GFLOP-Years as per NPB. The Baseline Capacity is shown by an overlaid horizontal line.
- c) High Performance Disk (T3E) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1 Terabyte) is shown by an overlaid horizontal line.
- d) Medium Performance Disk (Origin) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1.5 Terabytes) is shown by an overlaid horizontal line.
- e) HSM/Tape Usage (T3E) by month, showing the volumes held each in GBytes, split by Research Council. The Baseline Capacity (16 Terabytes) available will be shown by an overlaid horizontal line.

4.1 Cray T3E-1200E System (Turing)

The following graph shows the usage of Turing during each day of October 2001. Note that there is some variance on a day-to-day basis as the accounts record job times, and thus CPU usage figures, at the time of job completion which could be the second actual day for large jobs. At present, there is a 24 hour limit on jobs so that they are check-pointed, and computational time lost due to any failure is well managed. Higher limits can be set for individual jobs on request.

Turing usage for October:

The above usage graph for the Turing system shows that the overall workload was variable.

The graph also indicates the workload reached 100% of maximum theoretical capacity some parts of the month.

Fine tuning of the CfS scheduling system will continue to ensure minimal wasting of PE resource, in order to fit in a number of different sized jobs (e.g. 32, 64, 128, 256) thus facilitating maximised job throughput.

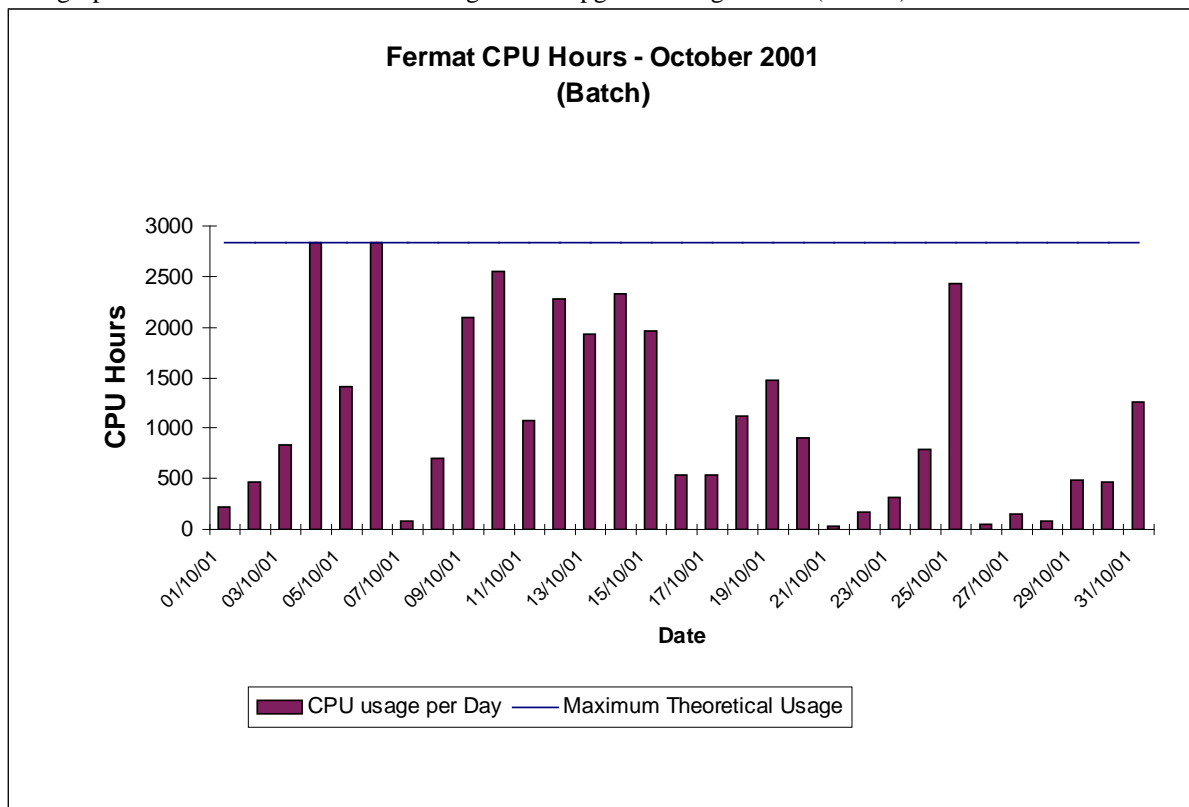

In particular, Turing will continue to start large jobs above 256 PEs, including 512 PEs, when they are queued subject to the overall workload.

4.2 SGI Origin2000 System (Fermat)

The usage of the Origin system was low. The groups most heavily using the Fermat system are CSE006 (Briddon), CSN006 (Price), CSN015 (Proctor) and HPCI Daresbury.

The graph above shows the interactive usage of the upgraded Origin 2000 (Fermat).

The above graph to a different scale shows the variable batch utilisation of the Origin 128.

4.3 Fujitsu VPP 300/8 System (Fuji)

Fuji utilisation was again variable over the month with the overall position resulting in usage above baseline.

4.4 SGI Origin3000 System (Green)

The above graph shows the utilisation of the now upgraded Green for the month of October, which saw the system running with a varied load as shown in the pie chart in section 4.6.

4.5 Disk/HSM Usage Charts

The graphs below show current disk and HSM allocations and usage.

The preceding graph shows actual usage on average against the current allocation of disk on the Turing system.

The above graph shows the disk allocations against usage on average of the disk on Fermat.

The above graph shows the total usage of the HSM facility by Research Council.

The next two graphs give actual usage of HSM by Consortia and by Research Council.

CSE002 (Gillan), CSE003 (Taylor) CSE004 (Sandham), CSE024 (Tennyson), CSN001 (Webb), CSN003 (O'Neill) & CSN015 (Proctor) were the major users of HSM resource.

4.6 Processor Usage and Job Statistics Charts

Job statistics for Turing:

The above graph shows the number of jobs of the major sizes run in the period 1st to 31st October 2001.

The next graph shows the wait times in minutes on Turing for the major categories of jobs.

The chart above shows the average wait time trend on Turing over the last 12 months. Wait times for all jobs have fallen as Green is now in full production usage as a 512 PE machine. The trend of falling job times has levelled off over the past two months.

The largest proportion of the workload on Turing, 80%, was greater than 64 PEs in size.

The major allocation of the workload on Green, 61%, was greater than 64 PEs in size.

Turing PE usage is shown by Research Council during the past 12 months of service in the above chart.

Origin 2000 CPU usage is shown by Research Council during the past 12 months of service in the above chart.

4.7 Class 2 & 3 Usage Charts

The next series of charts show the usage of the system by the class 2 & class 3 users. The usage is shown by project and identifies the Research Council of the individual projects.

The above chart shows the most significant PE usage of the Turing system by class 2 and class 3 users.

The above chart shows the CPU usage of the Fermat system by class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Turing system for class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Fermat system for class 2 and class 3 users. There is currently no HSM usage by class 2 and class 3 users.

4.8 Charts of Historical Usage

In all the Usage Charts, the baseline varies dependant on the number of days in each month, within a 365-day year.

The graph below shows the GFLOP Year utilisation on Turing and Fermat by Research Council for the previous 12 months; usage in July being reduced due to the outage for the major Green system upgrade.

The graph below shows the historic SMP/MPP usage on the major systems, with the upgrades to Fermat showing in January 2001 and Green showing in April to October 2001.

The above graph shows the historic interactive usage of the 'Baseline' Fermat system (equivalent to 16@250Mhz CPU's)

The next series of graphs illustrates the usage of the disk and HSM resources of the system.

The preceding graph illustrates the historic allocation of the High Performance Disk on Turing, which is now approaching the Baseline level.

The graph above illustrates the historic allocation of the Medium Performance Disk on Fermat, which is now beginning to grow more rapidly with the growth in usage of both Fermat and Green.

The graph below shows the historic HSM usage by Research Council funded projects, now close to Baseline. The primary usage is for NERC.

The next chart shows the historic usage of the Fuji system.

The Fujitsu system usage was above baseline this month.

4.8 Guest System Usage Charts

There is currently no Guest System usage.

5. Service Status, Issues and Plans

5.1 Status

The service continues to run almost at full capacity.

During the month, 80% of the jobs run on Turing were larger than 64 PEs in size.

During the month, 61% of the jobs run on Green were larger than 64 PEs in size.

5.2 Issues

The environmental issues, although no longer as evident, are still receiving Management attention.

There have been issues with retrieval times from the HSM system, however plans are in place to address this.

5.3 Plans

The new tape drives which will become an integral part of the SAN infrastructure are scheduled to be in place by the end of December.

This should address some of the retrieval time issues that users have been experiencing recently.

6. Conclusion

October 2001 saw the overall CPARS rating at Green with the baseline being exceeded by 55%.

The largest proportion of the workload, on the major systems (Turing & Green), continues to be of the larger job sizes.

Continued management attention will be given to maximise the throughput of the Service, whilst balancing as fairly as practicable the shares between Projects and jobs of the varying sizes.

Appendix 1 contains the accounts for October 2001

Appendix 2 contains the Percentage shares by Consortium for October 2001

Appendix 3 contains the Percentage shares by Research Council for October 2001

Appendix 4 contains the Training, Applications and Optimisation support figures to the end of October 2001

Appendix 5 contains a breakdown of resource usage by Consortia to the end of October 2001.

Appendix 6 contains a reference table of the Consortia name, the subject area and the PI name.

Appendix 1

The summary accounts for the month of October 2001 can be found at the URL below
