CSAR Service - Management Report

April 2001

This report documents the quality of the CSAR service during the month of April 2001.

A more comprehensive report is provided quarterly, which additionally covers wider aspects of the Service such as information on Training, Application Support and Value-Added services.

This and other such reports are made available through the Web to staff within EPSRC and the other Research Councils, to CfS staff and CSAR Service users. The reports are indexed in a similar way to that which other useful information and news are listed for selection.

1. Introduction

April has seen the T3E workload remain very high and the Origin 2000 (Fermat) with a high utilisation.

April also saw the introduction of the first Origin 3000 (Green).

The percentage of jobs larger than 64 PE's was 53%.

This document gives information on Service Quality and on actual usage of the CSAR Service during the reporting period of April 2001. The information, in particular, covers the availability and usage of the following two main CSAR Service High Performance Computing (HPC) systems:

```
∠ Cray T3E-1200E/776 (Turing)
∠ SGI Origin2000/128 (Fermat)
```

The information is provided in both textual and graphical form, so that it is easier to see trends and variances.

2. Service Quality

This section covers overall Customer Performance Assessment Ratings (CPARS), HPC System availability and usage, Service Quality Tokens and other information concerning issues, progress and plans for the CSAR Service.

2.1 CPARS

<u>Table 1</u> gives the measure by which the quality of the CSAR Service is judged. It identifies the metrics and performance targets, with colour coding so that different levels of achievement against targets can be readily identified. Unsatisfactory actual performance will trigger corrective action.

CSAR Service - Service Quality Report - Performance Targets

	Performance Targets					
Service Quality Measure	White	Blue	Green	Yellow	Orange	Red
HPC Services Availability						
Availability in Core Time (% of time)	> 99.9%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Availability out of Core Time (% of time)	> 99.8%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Number of Failures in month	0	1	2 to 3	4	5	> 5
Mean Time between failures in 52 week rolling period (hours)	>750	>500	>300	>200	>150	otherwise
Fujitsu Service Availability						
Availability in Core Time (% of time)	> 99.9%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Availability out of Core Time (% of time)	> 99.8%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Help Desk						
Non In-depth Queries - Max Time to resolve 50% of all queries (working days)	< 1/4	< 1/2	< 1	< 2	< 4	4 or more
Non In-depth Queries - Max Time to resolve 95% of all queries (working days)	< 1/2	< 1	< 2	< 3	< 5	5 or more
Administrative Queries - Max Time to resolve 95% of all queries (working days)	< 1/2	< 1	< 2	< 3	< 5	5 or more
Help Desk Telephone - % of calls answered within 2 minutes	>98%	> 95%	> 90%	> 85%	> 80%	80% or less
Others						
Normal Media Exchange Requests - average response time (working days)	< 1/2	< 1	< 2	< 3	< 5	5 or more
New User Registration Time (working days)	< 1/2	< 1	< 2	< 3	< 4	otherwise
Management Report Delivery Times (working days)	< 1	< 5	< 10	< 12	< 15	otherwise
System Maintenance - no. of scheduled sessions taken per system in the month	0	1	2	3	4	otherwise

Table 1

<u>Table 2</u> gives actual performance information for the period of April 1st to 30th inclusive.

Overall, the CPARS Performance Achievement in April was satisfactory (see Table 3); i.e. Green measured against the CPARS performance targets.

The Fujitsu availability figures are included in Table 2, but not Table 3 as they have zero weighting in CPARS terms.

CSAR Service - Service Quality Report - Actual Performance Achievement

										200	00/1

Table 2

Notes:

 HPC Services Availability has been calculated using the following formulae, based on the relative NPB performance of Turing and Fermat at installation:

[Turing availability $\times 122 / (122 + 3.5)$] + [Fermat availability $\times 3.5 / (122 + 3.5) \times 1.556$]

2 Mean Time between failures for Service Credits is formally calculated based on a rolling 12 month period.

<u>Table 3</u> gives Service Credit values for the month of April. These will be accounted on a quarterly basis, formally from the Go-Live Date. The values are calculated according to agreed Service Credit Ratings and Weightings.

CSAR Service - Service Quality Report - Service Credits

Table 3

2.2 Service Quality Tokens

The current position at the end of April 2001 is that twelve of the 509 registered users of the CSAR Service had used Service Quality Tokens.

The graph below shows the total number of registered users on the CSAR Service and the number of users holding a neutral view of the service.

The graph below illustrates the monthly usage trend of quality tokens:

The current status of the Stendahl tokens, is that there are eight users with outstanding black marks against the system, due to the queue times being long on the Turing system, and four users issuing Gold stars for improved job turnaround.

SUMMARY OF SERVICE QUALITY TOKEN USAGE

No of Stars or	Consortia		Reason Given
Marks		Allocated	
3 Gold Stars	CSN003	12/03/01	Service greatly improved
3 Gold Stars	CSN006	15/03/01	Now achieving good throughput
2 Gold Stars	CSN006	12/03/01	Improved turnaround times on Queues
1 Gold Star	CSN003	12/03/01	Problems resolved
4 Black Marks	CSE006	08/03/01	Excessive Queue times
5 Black Marks	CSE006	08/03/01	Excessive Queue times
5 Black Marks	CSE006	09/03/01	Excessive Queue times

2.3 Throughput Target against Baseline

The Baseline Target for throughput was fully achieved this month due to plenty of work over the period. The actual usage figure was 163% of Baseline capacity.

Job Throughput Against Baseline CSAR Service Provision

Period: 1st to 30th April 2001

	Baseline Capacity for Period (T3E PE Hours)	Actual Usage in Period (T3E PE Hours)	Actual % Utilisation c/w Baseline during Period
Has CfS failed to deliver Baseline MPP Computing Capacity for EPSRC?	347,855	569,050	163.59%
	Baseline Capacity for Period (T3E PE Hours)	Job Time Demands in Period	Job Demand above 110% of Baseline during Period (Yes/No)?
Have Users submitted work demanding > 110% of the Baseline during period?	347,855	571,987	Yes
		Number of Jobs at least 4 days old at end Period	Number of Jobs at least 4 days old at end Period is not zero (Yes/No)?
Are there User Jobs oustanding at the end of the period over 4 days old?		12	Yes
Have Users submitted work demands above 90% of the Baseline during period?		Minimum Job Time Demands as % of Baseline during Period	Minimum Job Time Demand above 90% of Baseline during Period (Yes/No)? Yes
	Number of standard Job Queues (ignoring priorities)	Average % of time each queue contained jobs in the Period	Average % of time each queue contained jobs in the Period is > 97%?
5. Majority of Job Queues contained jobs from Users for more than 97% during period?	4	73.0%	No

CfS

3. System Availability

Service availability each reporting period is calculated as a percentage of actual availability time over theoretical maximum time, after accounting for planned breaks in service for preventative maintenance.

3.1 Cray T3E-1200E System (Turing)

The following graphs show the availability of Turing both in core time and out of core time respectively during the period of 1^{st} to 30^{th} April.

Turing availability for April:

Availability of Turing in core time during April was good.

Availability of Turing out of core time during April was good. There was an incident on the 1st which resulted in the T3E being rebooted. It was not due to a T3E problem but was a failure of the environmental cooling systems.

3.2 SGI Origin2000 System (Fermat)

The following graphs show the availability of Fermat both in core time and out of core time respectively.

Availability of Fermat in core time during April was good.

Fermat had to be rebooted for the same incident that brought about the Turing reboot.

Availability of Fermat out of core time during April was good.

4. HPC Services Usage

Usage information is given in tabular form, in Appendices, and in graphical format. The system usage information for the period of April 1st to 30th is provided by Project/User Group, totalled by Research Council and overall. This covers:

?? CPU usage Turing: 547,942 PE Hours Fermat (Batch): 67730.61 Hours

?? Fermat (Interactive): 604.33 CPU Hours ?? Green (Batch) 9,579.02 Hours ?? Fujitsu CPU usage Fuji: 2,396.86 CPU Hours

?? User Disk allocation Turing: 67.11 GB Years Fermat: 28.08 GB Years

?? HSM/tape usage 1085.76 GB Years

In addition, the following graphs are provided to illustrate usage per month, historically:

- a) MPP (T3E/Origin) Usage by month, showing usage each month of CPU (MFOP Years as perNPB), split by Research Council and by system. The Baseline and the overall Capacity are shown by overlaid horizontal lines.
- b) SMP (Origin) Usage by month, showing usage each month in CPU Hours, split by Research Council and giving the equivalent GFLOP-Years as per NPB. The Baseline Capacity is shown by an overlaid horizontal line.
- c) High Performance Disk (T3E) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1 Terabyte) is shown by an overlaid horizontal line.
- d) Medium Performance Disk (Origin) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1.5 Terabytes) is shown by an overlaid horizontal line.
- e) HSM/Tape Usage (T3E) by month, showing the volumes held each in GBytes, split by Research Council. The Baseline Capacity (16 Terabytes) available will be shown by an overlaid horizontal line.

4.1 Cray T3E-1200E System (Turing)

The following graph shows the usage of Turing during each day of April 2001. Note that there is some variance on a day-to-day basis as the accounts record job times, and thus CPU usage figures, at the time of job completion which could be the second actual day for large jobs. At present, there is a 12 hour limit on jobs, so that they are check-pointed, and computational time lost due to any failure is well managed.

Turing usage for April:

The above usage graph for the Turing system shows that the overall workload was variable.

The graph also indicates the workload reached 100% of maximum theoretical capacity for a large part of the month.

Fine tuning of the CfS scheduling system will continue to ensure minimal wasting of PE resource, in order to fit in a number of different sized jobs (e.g. 32, 64, 128, 256) thus facilitating maximised job throughput.

In particular, Turing will continue to start large jobs above 256 PEs, including 512 PEs, every night they are queued subject to the overall workload.

In an effort to minimise the effect of the long queues CfS have been man managing work through on a priority basis, where requested.

4.2 SGI Origin2000 System (Fermat)

The usage of the Origin system was low at the beginning of the month but grew with the new batch queuing system and release of processors for batch work. The groups most heavily using the Fermat system are CSE006 (Briddon), CSN006 (Price), CSN015 (Proctor) and HPCI Daresbury.

The graph above shows the interactive usage of the upgraded Origin 2000 (Fermat).

The above graph to a different scale shows the growing batch utilisation of the Origin 128.

4.2.1 Fujitsu VPP 300/8 System (Fuji)

Fuji utilisation was again variable over the month with the overall position resulting in usage above baseline.

CIS

CfS Issue 1.1

4.3 Disk/HSM Usage Charts

The graphs below show current disk and HSM allocations and usage.

The preceding graph shows actual usage on average against the current allocation of disk on the Turing system.

The above graph shows the disk allocations against usage on average of the disk on Fermat.

The above graph shows the total usage of the HSM facility by Research Council.

CSE002 (Gillan), CSE004 (Sandham), CSE024 (Tennyson), CSN001 (Webb), CSN003 (O'Neill) & CSN015 (Proctor) were the major users of HSM resource.

CfS

Issue 1.1

Job statistics for Turing:

The above graph shows the number of jobs of the major sizes run in the period 1st to 30th April 2001.

The next graph shows the wait times in minutes for the major categories of jobs.

The chart above shows the average wait time trend over the last 12 months. Wait times for all jobs currently remain high due to the heavy workload on the system.

It can be seen from the above graph that enhancements to the scheduling on Turing did reduce the average wait times in November/December, however the times have again started to climb due to the volumes of work on Turing.

The largest proportion of the workload on Turing, 53%, was greater than 64 PEs in size.

Turing PE usage is shown by Research Council during the past 12 months of service in the above chart.

Origin 2000 CPU usage is shown by Research Council during the past 12 months of service in the above chart.

4.4 Class 2 & 3 Usage Charts

The next series of charts show the usage of the system by the class 2 & class 3 users. The usage is shown by project and identifies the Research Council of the individual projects.

The above chart shows the most significant PE usage of the Turing system by class 2 and class 3 users.

CfS

The above chart shows the CPU usage of the Fermat system by class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Turing system for class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Fermat system for class 2 and class 3 users.

There is currently no HSM usage by class 2 and class 3 users.

CfS

4.5 Charts of Historical Usage

In all the Usage Charts, the baseline varies dependant on the number of days in each month, within a 365-day year.

The graph below shows the GFLOP Year utilisation on Turing and Fermat by Research Council for the previous 12 months.

The graph below shows the historic SMP/MPP usage on the major systems commencing in January 2001.

The above graph shows the historic interactive usage of the 'Baseline' Fermat system (equivalent to 16@250Mhz CPU's)

The next series of graphs illustrates the usage of the disk and HSM resources of the system.

The preceding graph illustrates the historic allocation of the High Performance Disk on Turing.

The graph above illustrates the historic allocation of the Medium Performance Disk on Fermat.

The graph below shows the historic HSM usage by Research Council funded projects. The primary usage is for NERC.

The next chart shows the historic usage of the Fuji system.

The Fujitsu system was above baseline this month.

4.5 Guest System Usage Charts

There is at present no guest system usage to report, however NERC continue to evaluate the Compaq.

5. Service Status, Issues and Plans

5.1 Status

The service continues to run almost at full capacity.

During the month, 68% of the jobs run on Turing were larger than 128 PEs in size.

The Origin 128 (Fermat) continues to be heavily used.

5.2 Issues

Wait times on the T3E continue to be long.

5.3 Plans

The first phase of the introduction of what is to become the largest shared memory machine available to UK academia is complete. The second phase is due to be complete at the end of May.

6. Conclusion

April 2001 saw the overall CPARS rating at Green with the baseline being exceeded by 63%.

The largest proportion of the workload continues to be of the larger job sizes.

Continued management attention will be given to maximise the throughput of the Service, whilst balancing as fairly as practicable the shares between Projects and jobs of the varying sizes.

Appendix 1 contains the accounts for April 2001

Appendix 2 contains the Percentage shares by Consortium for April 2001

Appendix 3 contains the Percentage shares by Research Council for April 2001

Appendix 4 contains the Training, Applications and Optimisation support figures to the end of April 2001

Appendix 5 contains a reference table of the Consortia name, the subject area and the PI name.
