

# CSAR Service - Management Report

## December 2001

This report documents the quality of the CSAR service during the month of December 2001.

A more comprehensive report is provided quarterly, which additionally covers wider aspects of the Service such as information on Training, Application Support and Value-Added services.

This and other such reports are made available through the Web to staff within EPSRC and the other Research Councils, to CfS staff and CSAR Service users. The reports are indexed in a similar way to that which other useful information and news are listed for selection.

### 1. Introduction

This document gives information on Service Quality and on actual usage of the CSAR Service during the reporting period of December 2001. The information, in particular, covers the availability and usage of the following three main CSAR Service High Performance Computing (HPC) systems:

- Cray T3E-1200E/776 (Turing)
- SGI Origin2000/128 (Fermat)
- SGI Origin3000/512 (Green)

The information is provided in both textual and graphical form, so that it is easier to see trends and variances.

December has seen the workload of the three primary systems remaining high.

The percentage of Turing CPU capacity used by jobs larger than 64 PEs was 91%.

December also saw the percentage of Green CPU capacity used by jobs larger than 64 PEs at 87%.

### 2. Service Quality

This section covers overall Customer Performance Assessment Ratings (CPARS), HPC System availability and usage, Service Quality Tokens and other information concerning issues, progress and plans for the CSAR Service.

## 2.1 CPARS

Table 1 gives the measure by which the quality of the CSAR Service is judged. It identifies the metrics and performance targets, with colour coding so that different levels of achievement against targets can be readily identified. Unsatisfactory actual performance will trigger corrective action.

### CSAR Service - Service Quality Report - Performance Targets

Service Quality Measure	Performance Targets					
	White	Blue	Green	Yellow	Orange	Red
<b>HPC Services Availability</b>						
Availability in Core Time (% of time)	> 99.9%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Availability out of Core Time (% of time)	> 99.8%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Number of Failures in month	0	1	2 to 3	4	5	> 5
Mean Time between failures in 52 week rolling period (hours)	>750	>500	>300	>200	>150	otherwise
<b>Fujitsu Service Availability</b>						
Availability in Core Time (% of time)	> 99.9%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
Availability out of Core Time (% of time)	> 99.8%	> 99.5%	> 99.2%	> 98.5%	> 95%	95% or less
<b>Help Desk</b>						
Non In-depth Queries - Max Time to resolve 50% of all queries	< 1/4	< 1/2	< 1	< 2	< 4	4 or more
Non In-depth Queries - Max Time to resolve 95% of all queries	< 1/2	< 1	< 2	< 3	< 5	5 or more
Administrative Queries - Max Time to resolve 95% of all queries	< 1/2	< 1	< 2	< 3	< 5	5 or more
Help Desk Telephone - % of calls answered within 2 minutes	>98%	> 95%	> 90%	> 85%	> 80%	80% or less
<b>Others</b>						
Normal Media Exchange Requests - average response time	< 1/2	< 1	< 2	< 3	< 5	5 or more
New User Registration Time (working days)	< 1/2	< 1	< 2	< 3	< 4	otherwise
Management Report Delivery Times (working days)	< 1	< 5	< 10	< 12	< 15	otherwise
System Maintenance - no. of sessions taken per system in the month	0	1	2	3	4	otherwise

**Table 1**

Table 2 gives actual performance information for the period of December 1<sup>st</sup> to 31<sup>st</sup> inclusive. Overall, the CPARS Performance Achievement in December was satisfactory (see Table 3); i.e. Green measured against the CPARS performance targets. The Fujitsu availability figures are included in Table 2, but not Table 3 as they have zero weighting in CPARS terms.

### CSAR Service - Service Quality Report - Actual Performance Achievement

Service Quality Measure	2001/2											
	Jan	Feb	March	April	May	June	July	Aug	Sept	Oct	Nov	Dec
<b>HPC Services Availability</b>												
Availability in Core Time (% of time)	99.70%	99.70%	100%	100%	99.70%	99.70%	98.49%	98.49%	98.49%	98.60%	98.60%	100.00%
Availability out of Core Time (% of time)	99.50%	99.40	99.40	99.40	99.40	99.40	98.49%	100%	99.40	99.50%	99.50%	98.49%

New User Registration Time (working days)	0	0	0	0	0	0	0	0	0	0	0	0
Management Report Delivery Times (working days)	10	10	10	12	10	10	10	10	10	10	10	10
System Maintenance - no. of sessions taken per system in the month	0	2	1	1	0	0	1	2	2	2	2	2

**Table 2**

**Notes:**

- HPC Services Availability has been calculated using the following formulae, based on the relative NPB performance of Turing and Fermat at installation:  

$$[ \text{Turing availability} \times 122 / (122 + 3.5) ] + [ \text{Fermat availability} \times 3.5 / (122 + 3.5) \times 1.556 ]$$
- Mean Time between failures for Service Credits is formally calculated based on a rolling 12 month period.

Table 3 gives Service Credit values for the month of December. These will be accounted on a quarterly basis, formally from the Go-Live Date. The values are calculated according to agreed Service Credit Ratings and Weightings.

**CSAR Service - Service Quality Report - Service Credit Ratings**

**Table 3**

## 2.2 Service Quality Tokens

The position at the end of December 2001 is that two of the 554 registered users of the CSAR Service had registered two black marks against the service.

The graph above shows the total number of registered users on the CSAR Service and the number of users holding a neutral view of the service.

The graph below illustrates the monthly usage trend of quality tokens:

The current status of the Stendahl tokens is that 2 users had allocated black marks against the system for the problems shown in the table below.

### SUMMARY OF SERVICE QUALITY TOKEN USAGE

No of Stars or Marks	Consortia	Date Allocated	Reason Given
2 Black Marks	cse085	22/11/01	Deterioration of interactive response on Fermat
2 Black Marks	cse085	09/11/01	Problems running jobs on Green

## 2.3 Throughput Target against Baseline

The Baseline Target for throughput was fully achieved this month due to plenty of work over the period. The actual usage figure was 153% of Baseline capacity.

### Job Throughput Against Baseline CSAR Service Provision

Period: 1st to 31st December 2001

	Baseline Capacity for Period (T3E PE Hours)	Actual Usage in Period (T3E PE Hours)	Actual % Utilisation c/w Baseline during Period
1. Has CfS failed to deliver Baseline MPP Computing Capacity for EPSRC?	359,450	550,360	153.11%
	Baseline Capacity for Period (T3E PE Hours)	Job Time Demands in Period	Job Demand above 110% of Baseline during Period (Yes/No)?
2. Have Users submitted work demanding > 110% of the Baseline during period?	359,450	561,943	Yes
		Number of Jobs at least 4 days old at end Period	Number of Jobs at least 4 days old at end Period is not zero (Yes/No)?
3. Are there User Jobs outstanding at the end of the period over 4 days old?		2	Yes
		Minimum Job Time Demands as % of Baseline during Period	Minimum Job Time Demand above 90% of Baseline during Period (Yes/No)?
4. Have Users submitted work demands above 90% of the Baseline during period?		82%	No
	Number of standard Job Queues (ignoring priorities)	Average % of time each queue contained jobs in the Period	Average % of time each queue contained jobs in the Period is > 97%?
5. Majority of Job Queues contained jobs from Users for more than 97% during period?	4	71.0%	No

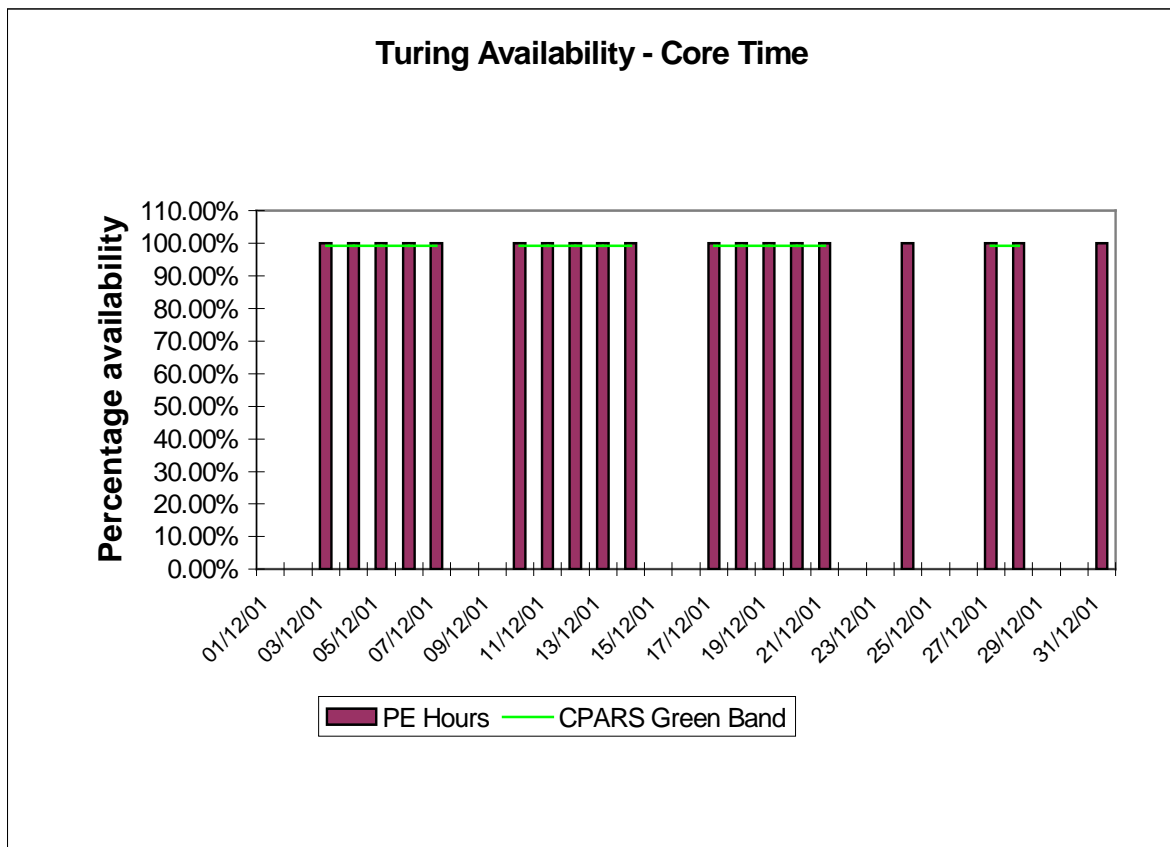

### 3. System Availability

Service availability each reporting period is calculated as a percentage of actual availability time over theoretical maximum time, after accounting for planned breaks in service for preventative maintenance.

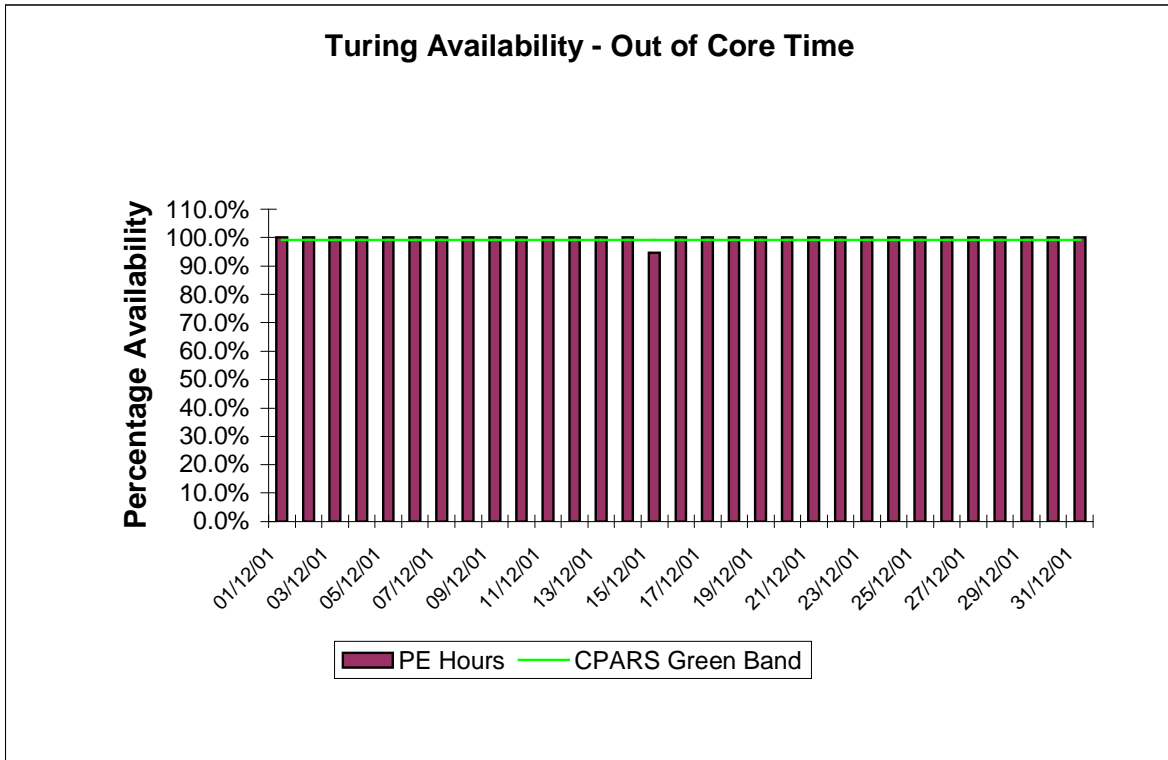

#### 3.1 Cray T3E-1200E System (Turing)

The following graphs show the availability of Turing both in core time and out of core time respectively during the period of 1<sup>st</sup> to 31<sup>st</sup> December.

Turing availability for December:

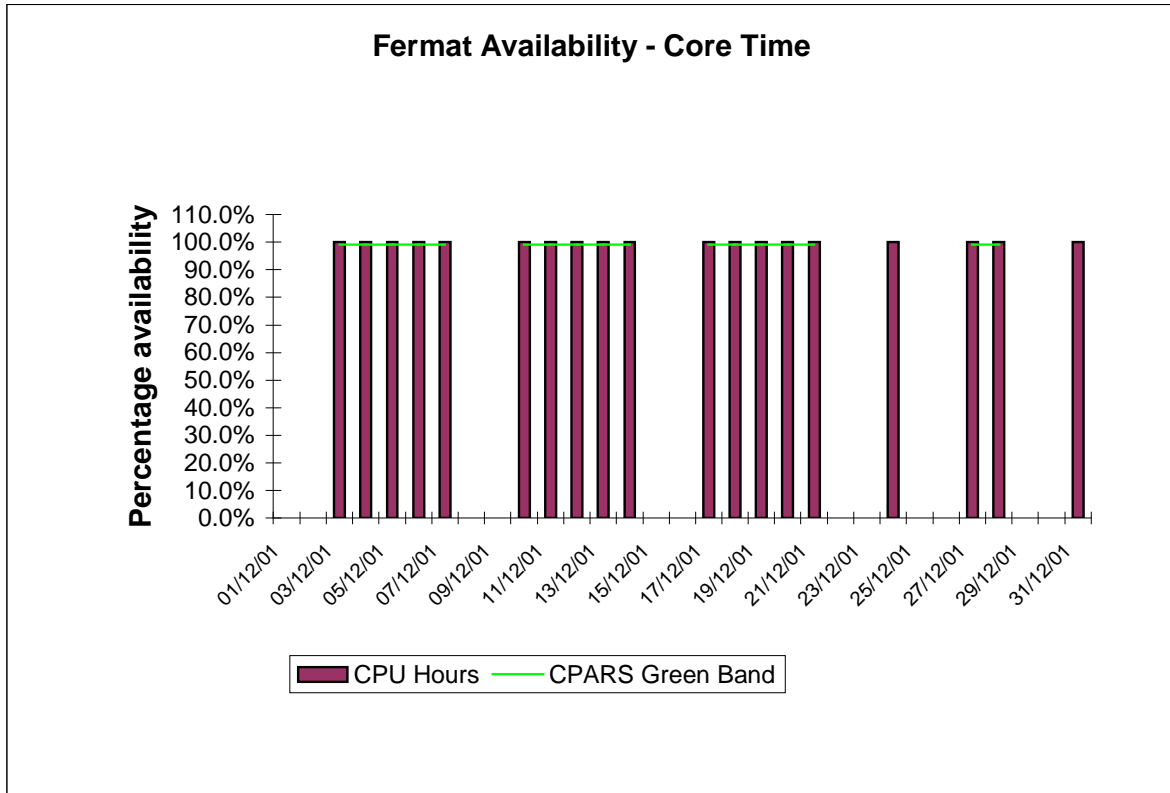

Availability of Turing in core time during December was excellent.

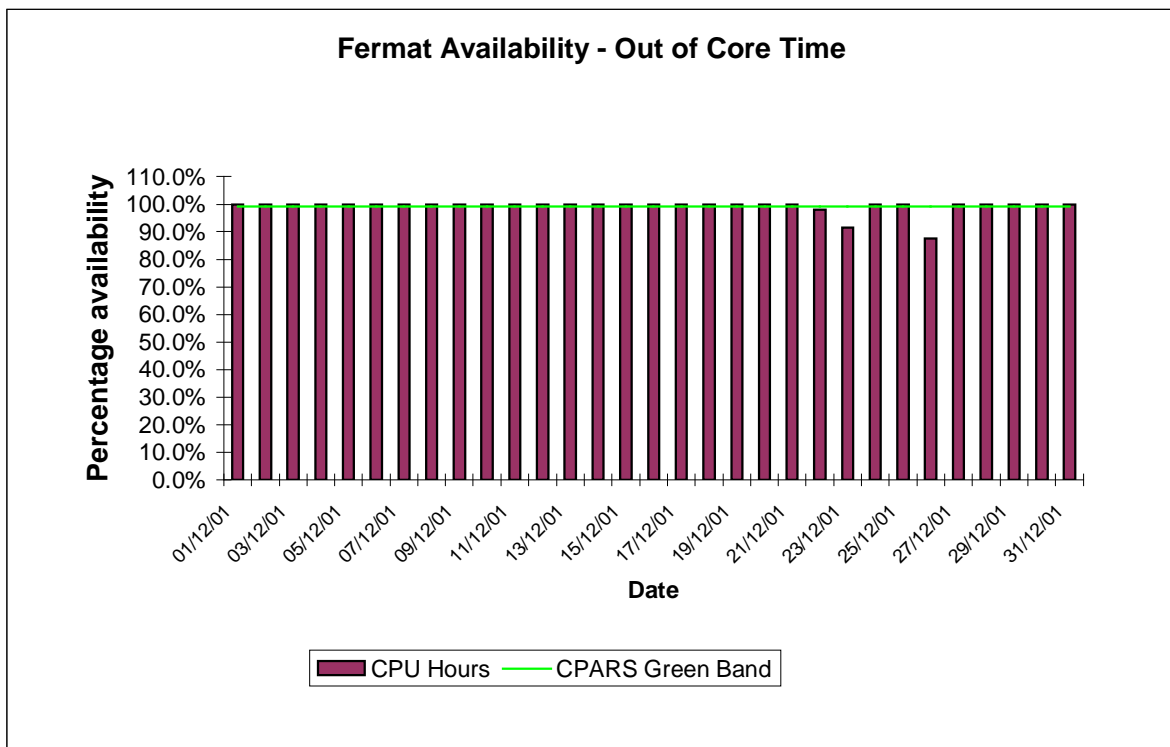

Availability of Turing out of core time during December was good with the exception of one unplanned service break.

### 3.2 SGI Origin2000 System (Fermat)

The following graphs show the availability of Fermat both in core time and out of core time respectively.

Availability of Fermat in core time during December was excellent.

Availability of Fermat out of core time during December was good with the exception of two unscheduled breaks in service.

## 4. HPC Services Usage

Usage information is given in tabular form, in Appendices, and in graphical format. The system usage information for the period of December 1<sup>st</sup> to 31st, is provided by Project/User Group, totalled by Research Council and overall. This covers:

- CPU usage                      Turing: 550,360 PE Hours              Fermat (Batch): 37,782 Hours
- Fermat (Interactive): 223 CPU Hours
- Green: 198,686 Hours
- Fujitsu CPU usage              Fuji: 1,472 CPU Hours
- User Disk allocation           Turing: 81.99 GB Years              Fermat: 78.94 GB Years
- HSM/tape usage                1487.24 GB Years

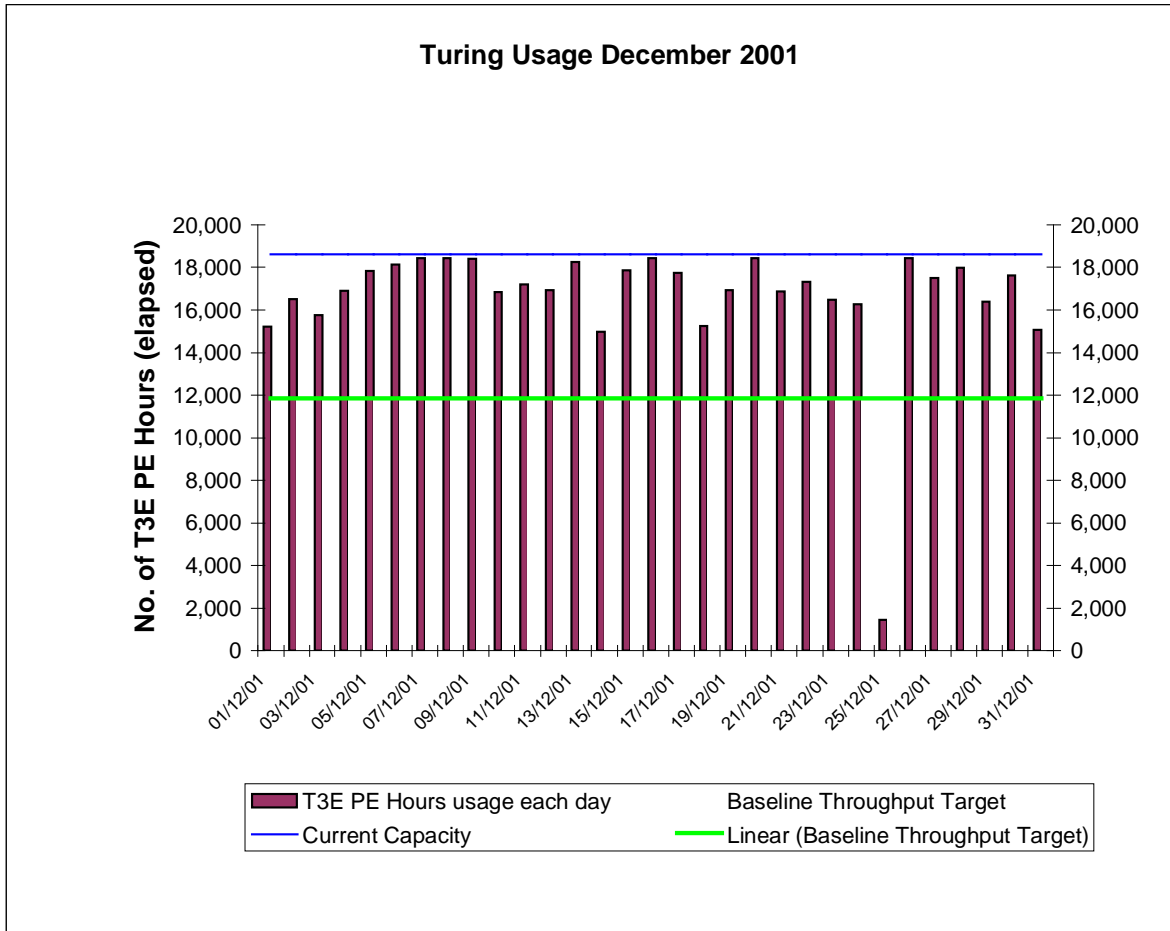

In addition, the following graphs are provided to illustrate usage per month, historically:

- a) MPP (T3E/Origin) Usage by month, showing usage each month of CPU (MFOP Years as per NPB), split by Research Council and by system. The Baseline and the overall Capacity are shown by overlaid horizontal lines.
- b) SMP (Origin) Usage by month, showing usage each month in CPU Hours, split by Research Council and giving the equivalent GFLOP-Years as per NPB. The Baseline Capacity is shown by an overlaid horizontal line.
- c) High Performance Disk (T3E) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1 Terabyte) is shown by an overlaid horizontal line.
- d) Medium Performance Disk (Origin) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1.5 Terabytes) is shown by an overlaid horizontal line.
- e) HSM/Tape Usage (T3E) by month, showing the volumes held each in GBytes, split by Research Council. The Baseline Capacity (16 Terabytes) available will be shown by an overlaid horizontal line.

### 4.1 Cray T3E-1200E System (Turing)

The following graph shows the usage of Turing during each day of December 2001. Note that there is some variance on a day-to-day basis as the accounts record job times, and thus CPU usage figures, at the time of job completion which could be the second actual day for large jobs. At present, there is a 24 hour limit on jobs so that they are check-pointed, and computational time lost due to any failure is well managed. Higher limits can be set for individual jobs on request.

Turing usage for December:

The above usage graph for the Turing system shows that the overall workload was variable.

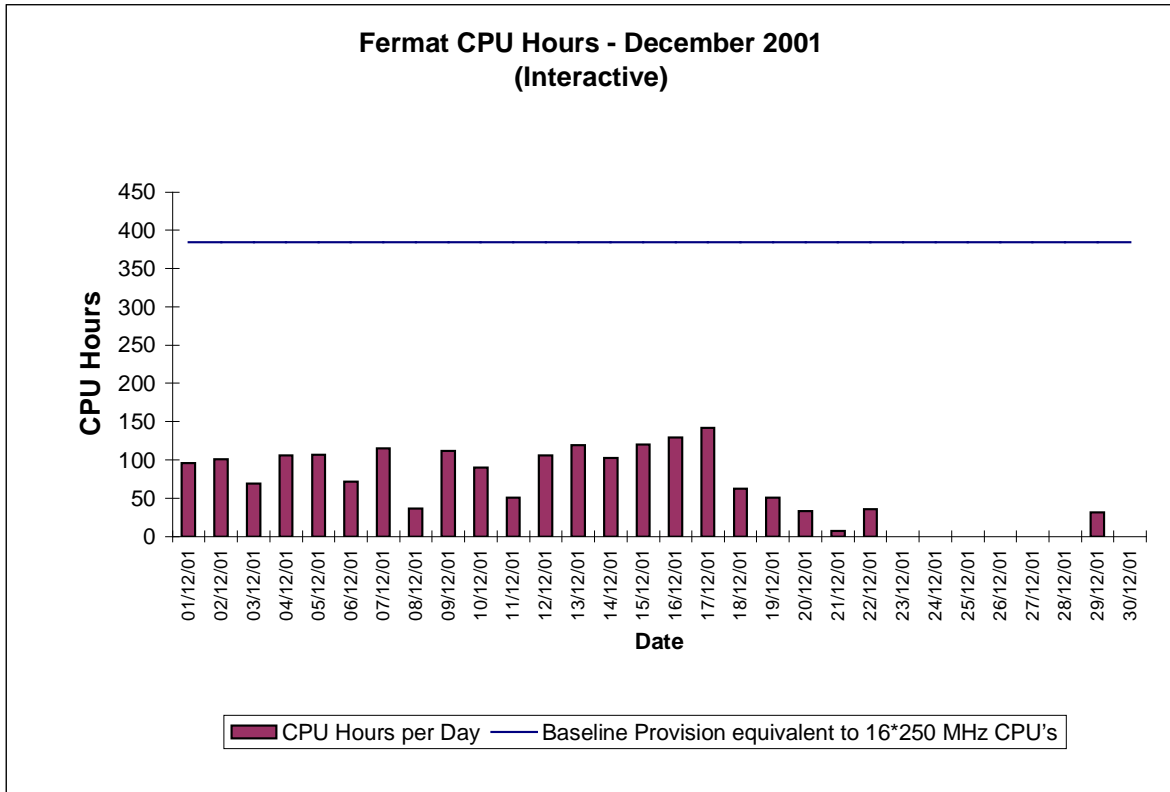

The graph also indicates the workload reached 100% of maximum theoretical capacity some parts of the month.

Fine tuning of the CfS scheduling system will continue to ensure minimal wasting of PE resource, in order to fit in a number of different sized jobs (e.g. 32, 64, 128, 256) thus facilitating maximised job throughput.

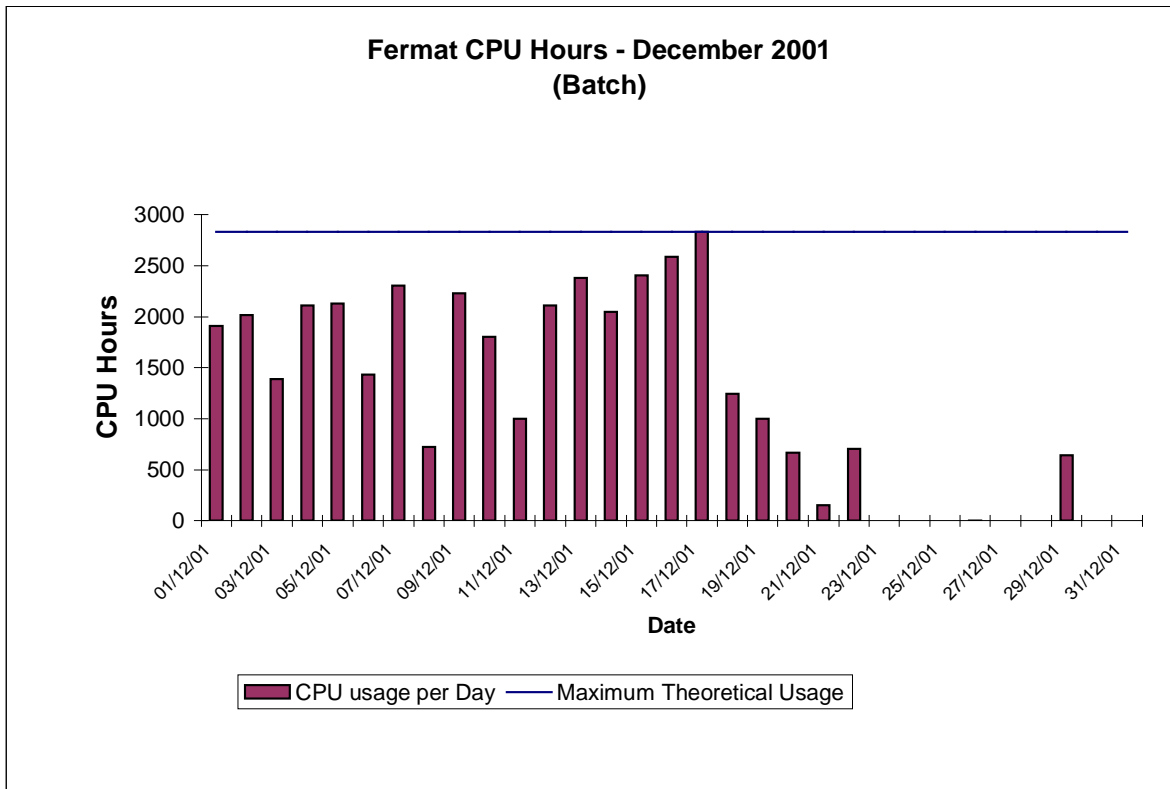

In particular, Turing will continue to start large jobs above 256 PEs, including 512 PEs, when they are queued subject to the overall workload.

### 4.2 SGI Origin2000 System (Fermat)

The usage of the Origin system was low. The groups most heavily using the Fermat system are CSE006 (Briddon), CSN006 (Price), CSN015 (Proctor) and HPCI Daresbury.

The graph above shows the interactive usage of the upgraded Origin 2000 (Fermat).

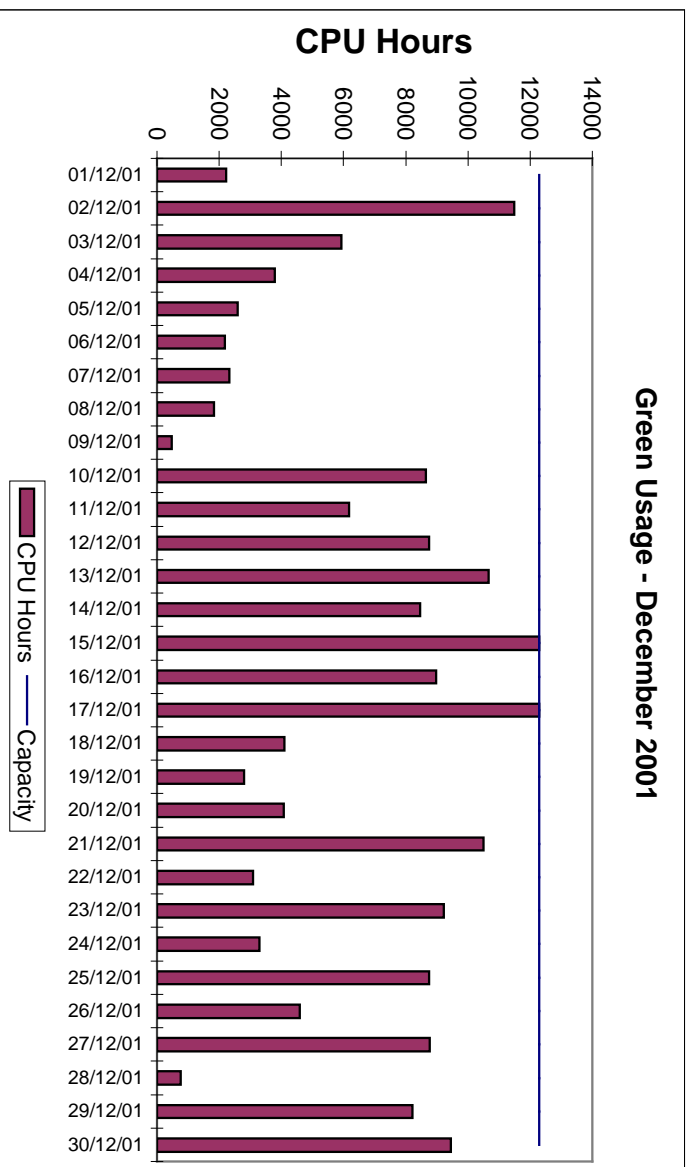

The above graph to a different scale shows the variable batch utilisation of the Origin 128.

4.3 Fujitsu VPP 300/8 System (Fuji)

Fuji utilisation was again variable over the month with the overall position resulting in usage below baseline.

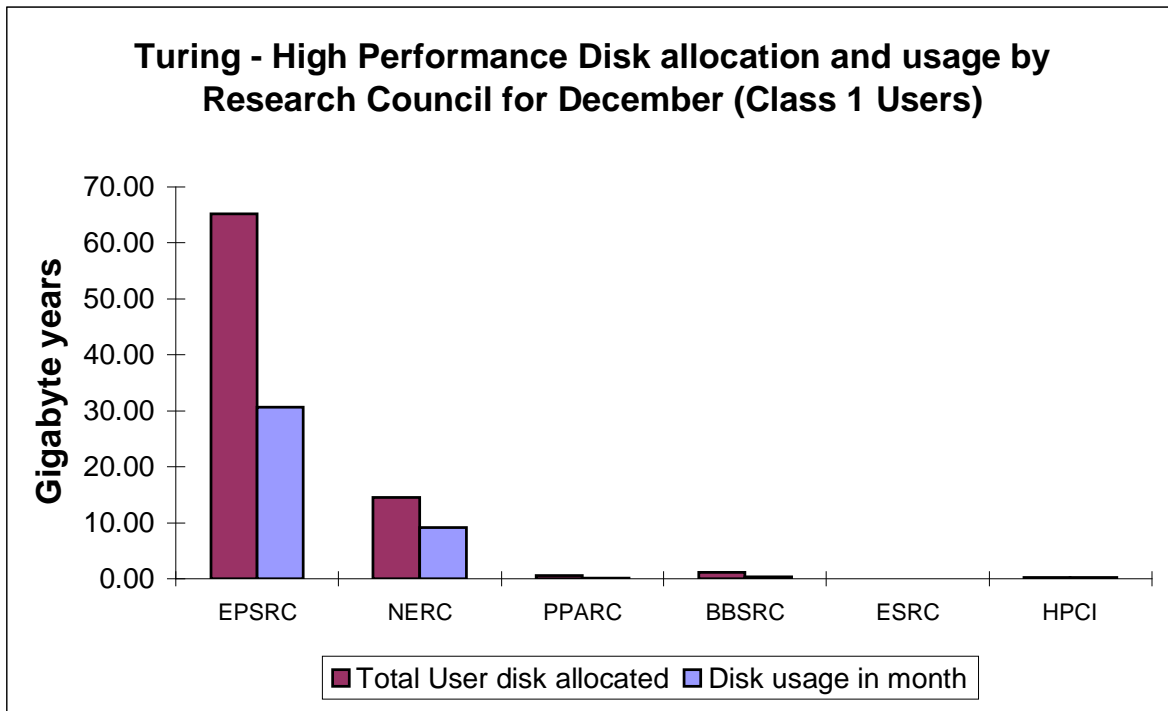

4.4 SGI Origin3000 System (Green)

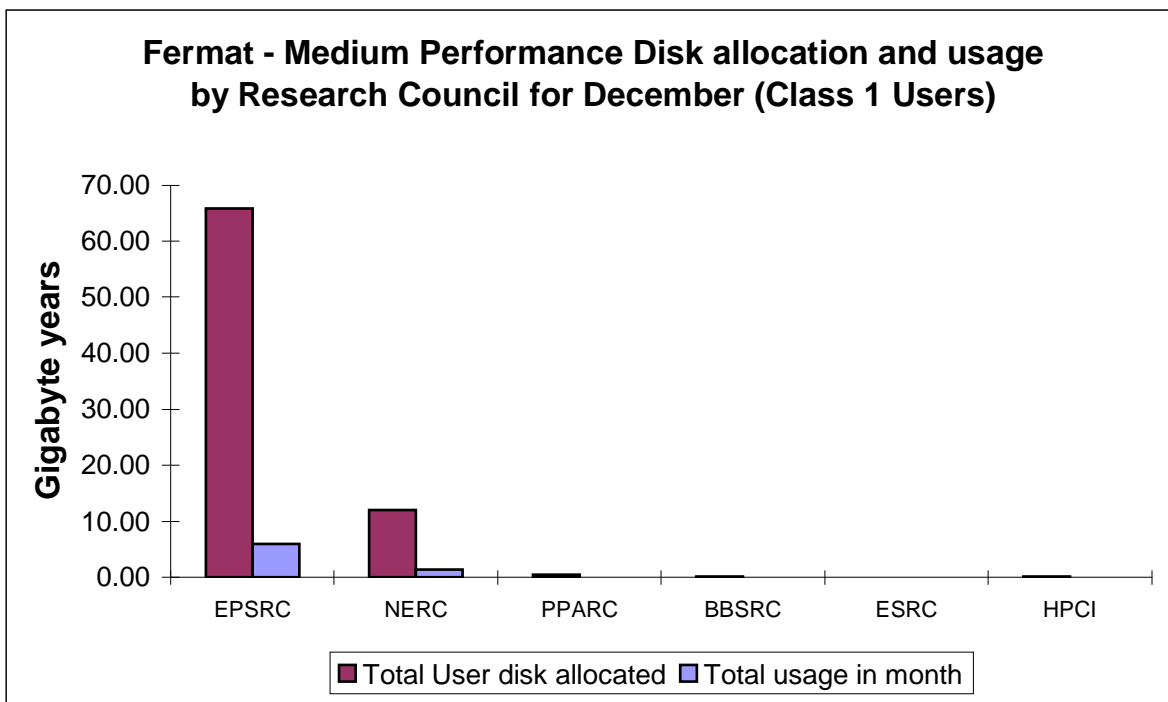

The above graph shows the utilisation of Green for the month of December, which saw the system running with a varied load.

### 4.5 Disk/HSM Usage Charts

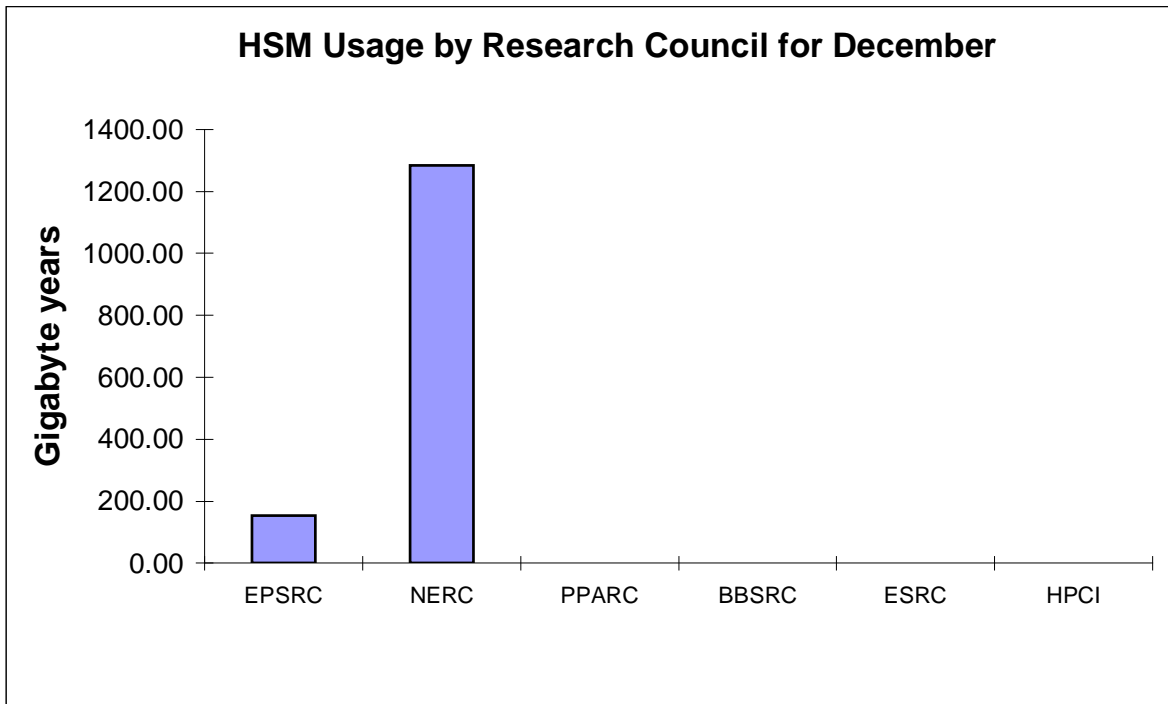

The graphs below show current disk and HSM allocations and usage.

The preceding graph shows actual usage on average against the current allocation of disk on the Turing system.

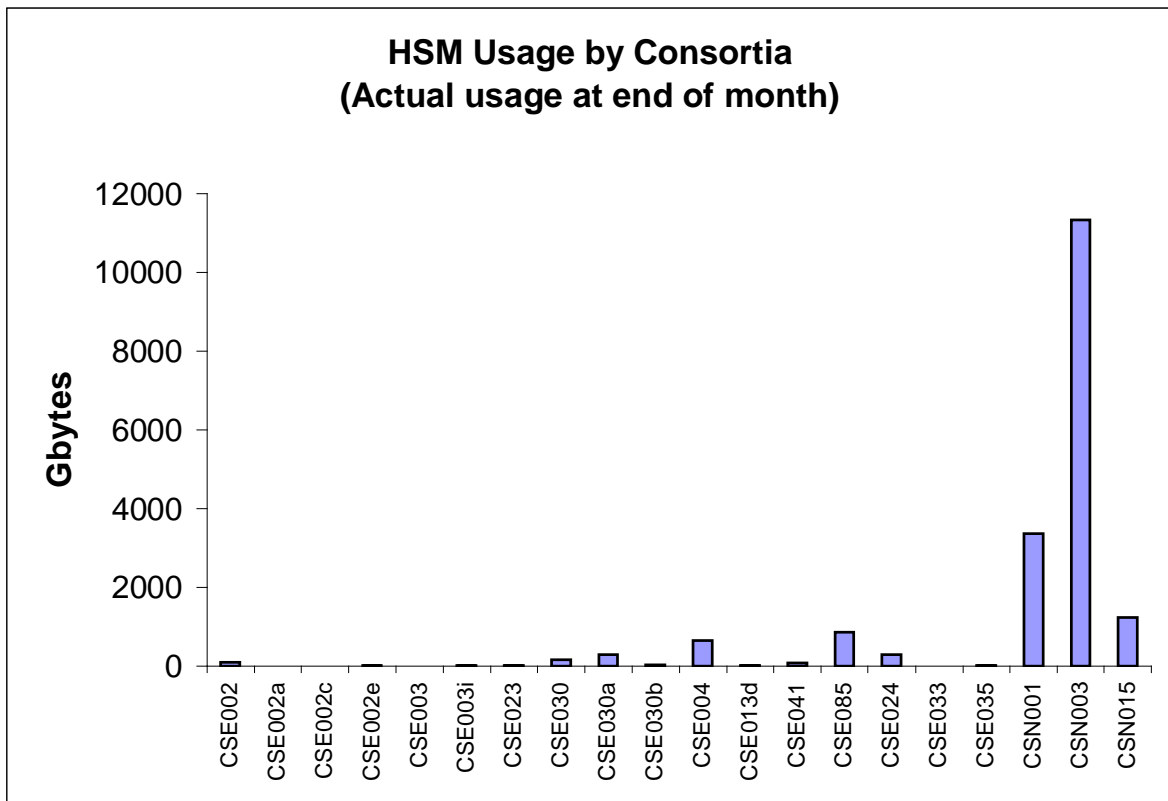

The above graph shows the disk allocations against usage on average of the disk on Fermat.

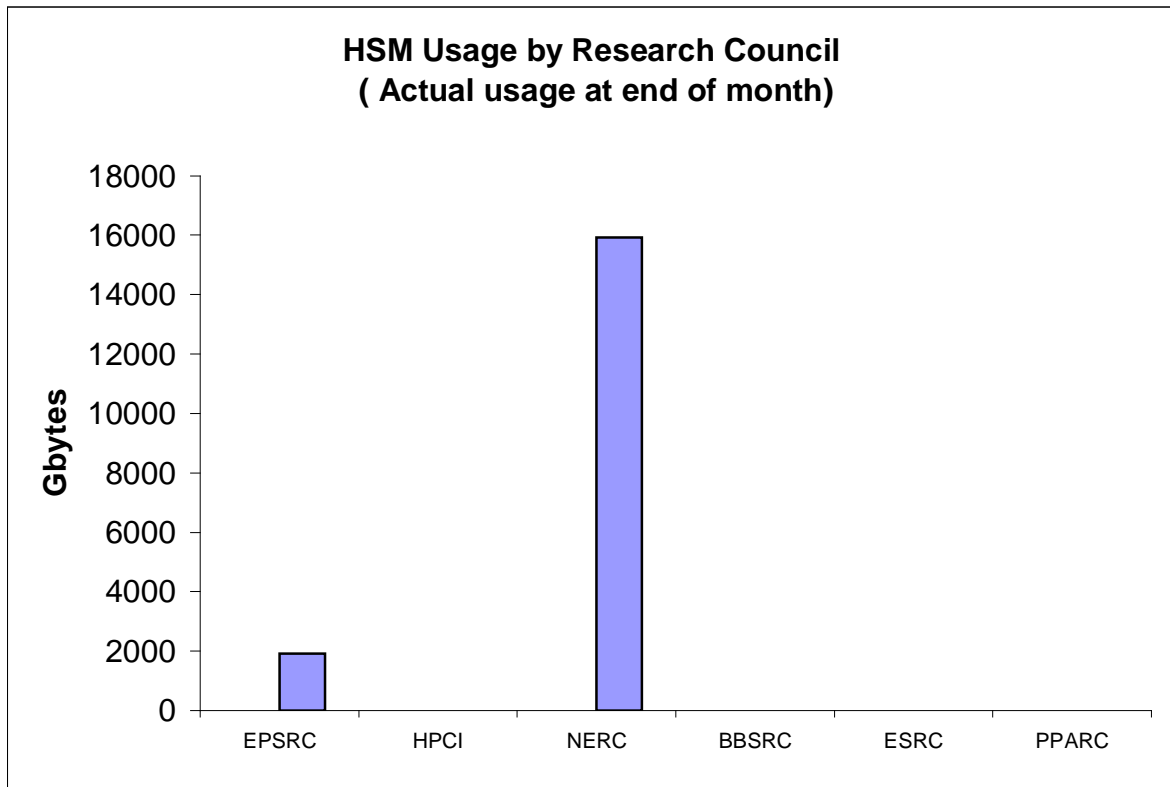

The above graph shows the total usage of the HSM facility by Research Council.

The next two graphs give actual usage of HSM by Consortia and by Research Council.

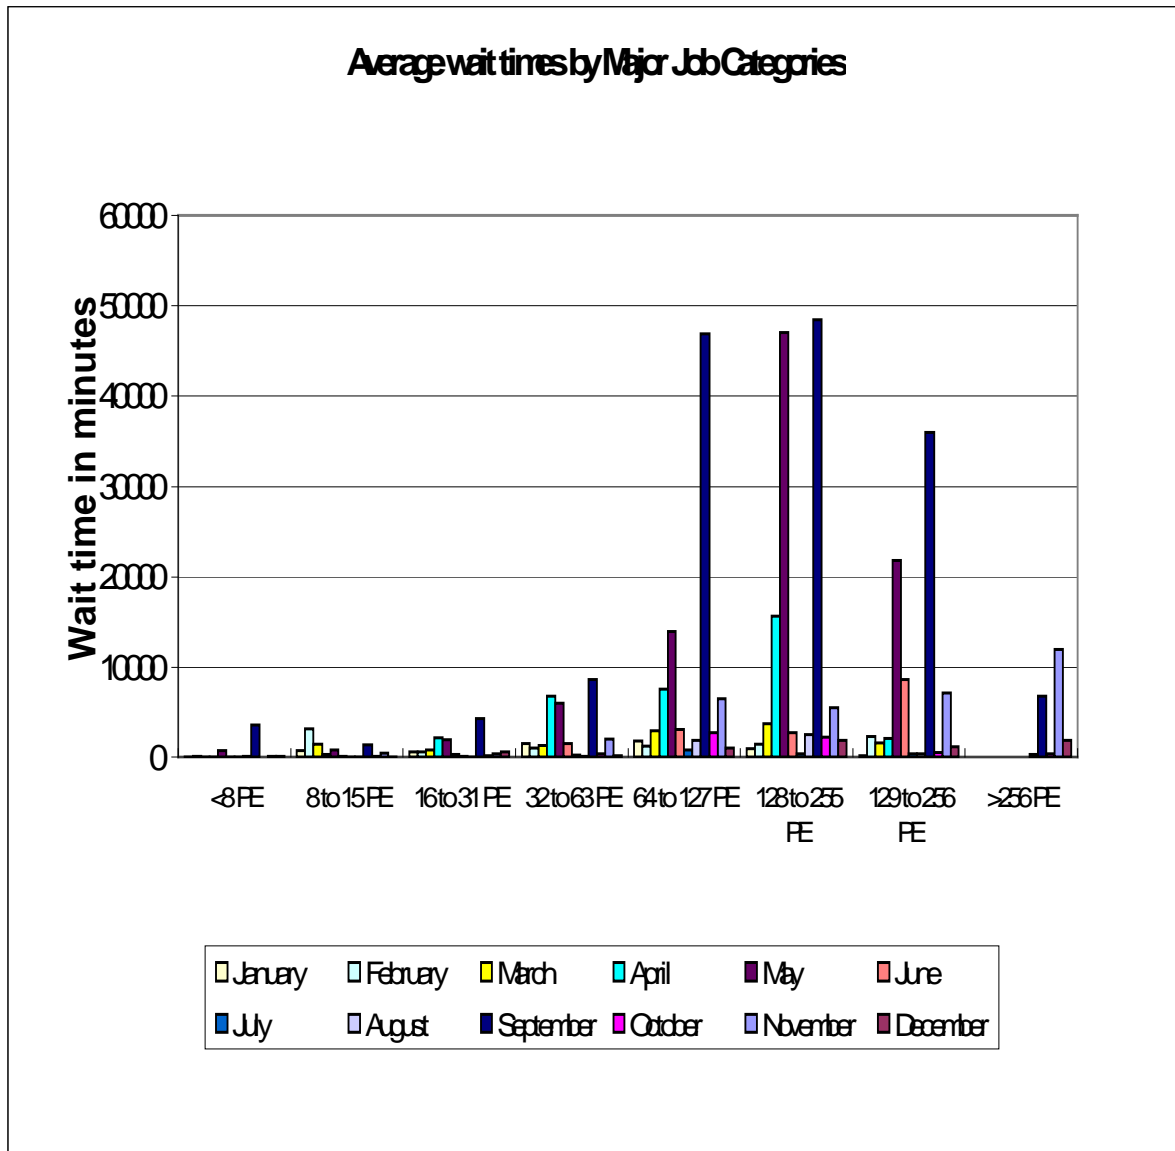

CSE003a (Taylor), CSE004 (Sandham), CSE024 (Tennyson), CSE085 (Sandham), CSN001 (Webb), CSN003 (O'Neill) & CSN015 (Proctor) were the major users of HSM resource.

### 4.6 Processor Usage and Job Statistics Charts

Job statistics for Turing:

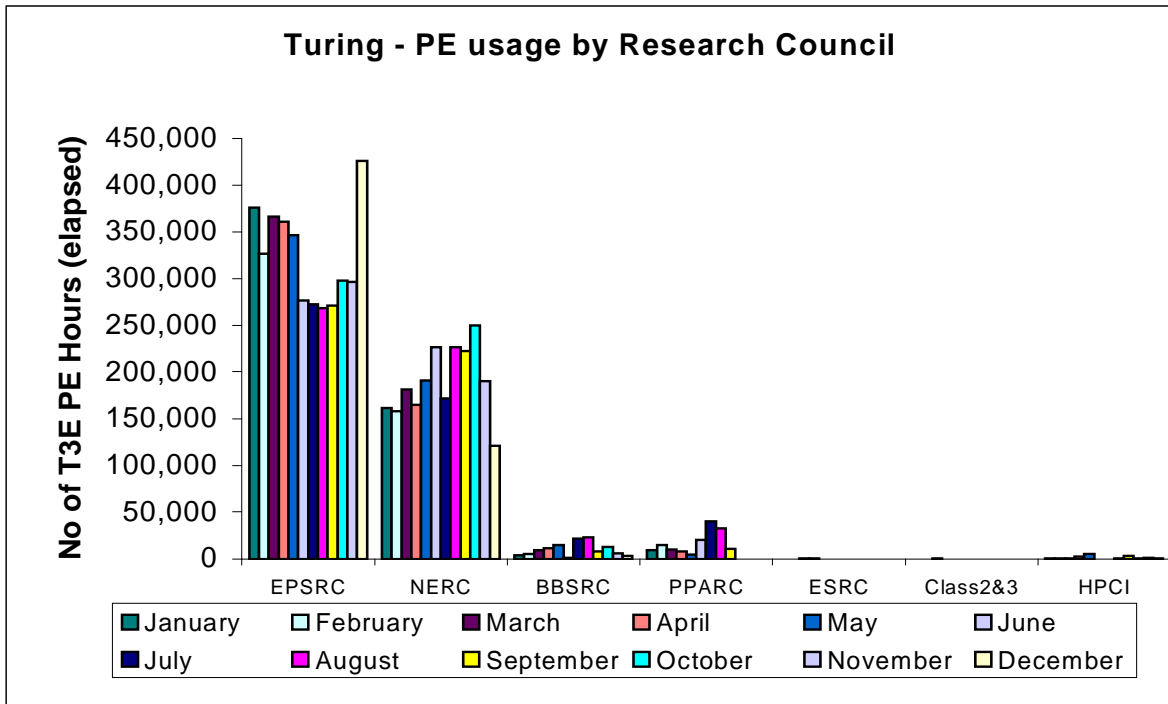

The above graph shows the number of jobs of the major sizes run in the period 1<sup>st</sup> to 31<sup>st</sup> December 2001.

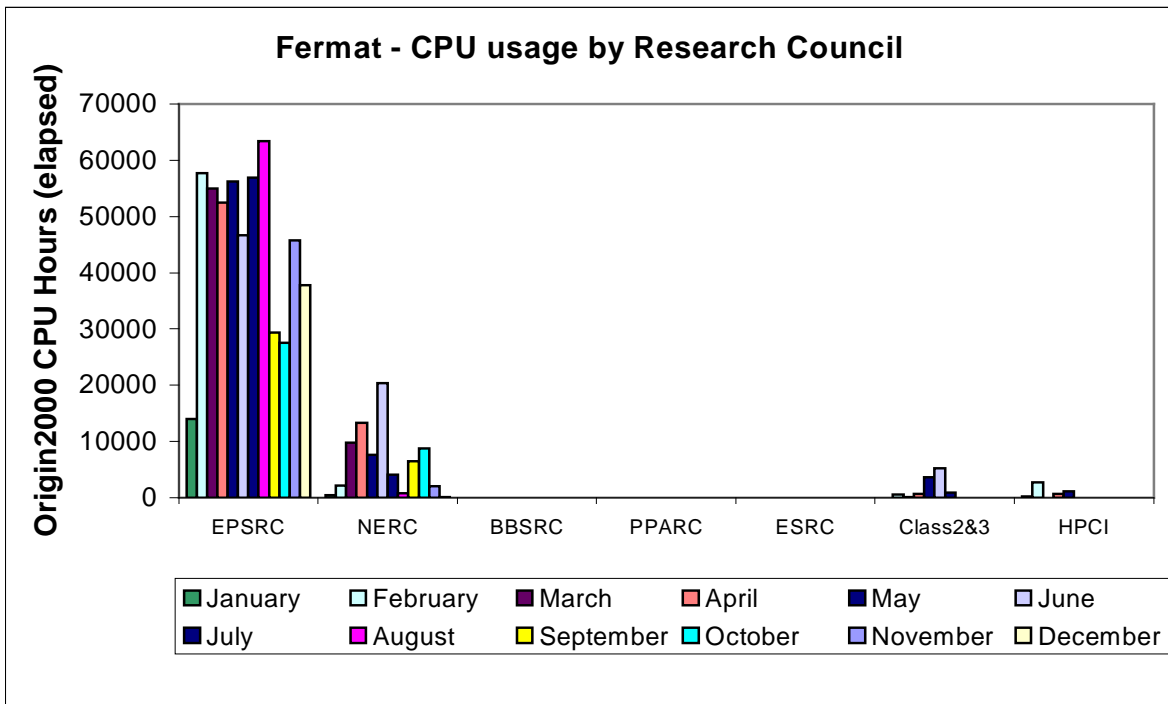

The next graph shows the wait times in minutes on Turing for the major categories of jobs.

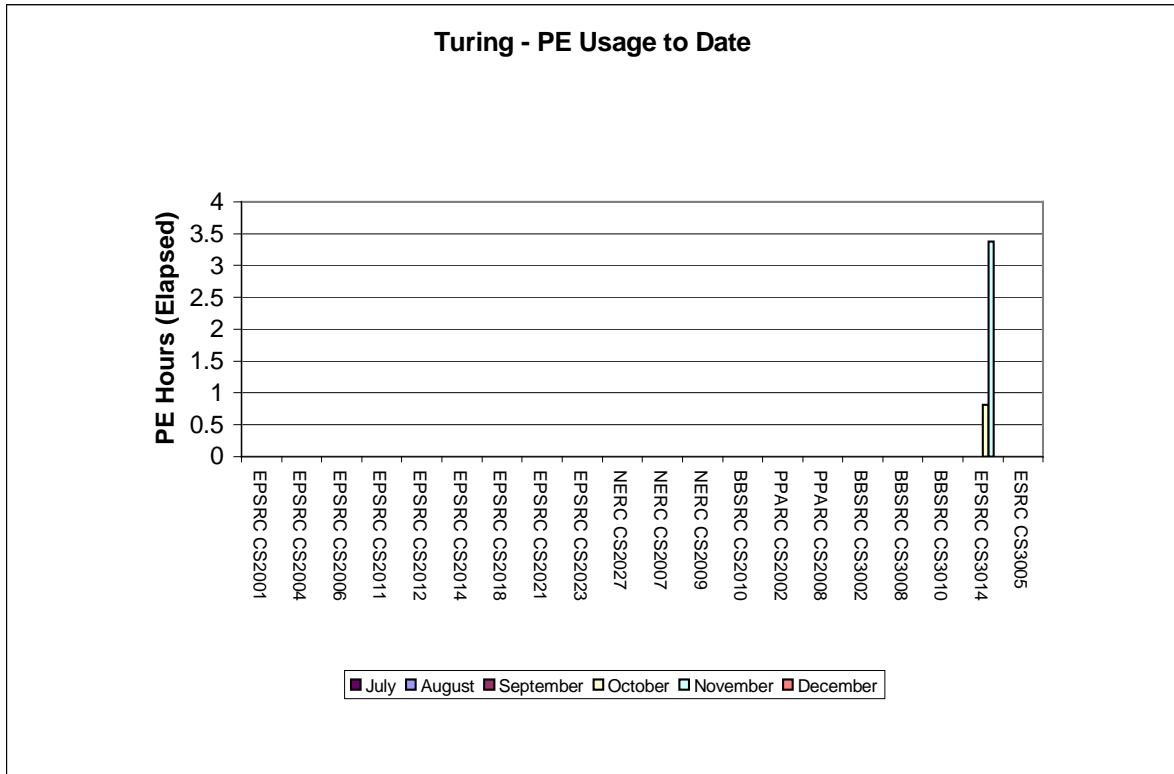

The chart above shows the average wait time trend on Turing over the last 12 months. Wait times for all jobs had fallen as Green is now in full production usage as a 512 PE machine. The trend now shows a slight fall in overall wait times over the November figures.

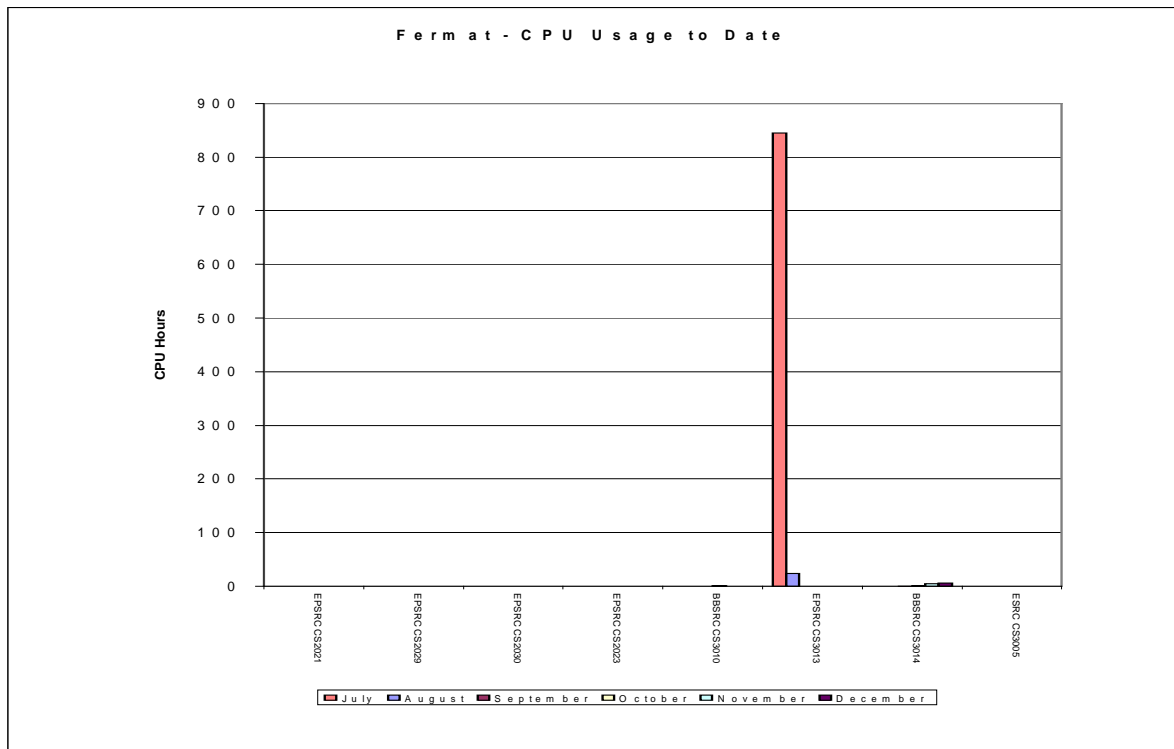

The largest proportion of the workload on Turing, 91%, was greater than 64 PEs in size.

The major allocation of the workload on Green, 87%, was greater than 64 PEs in size.

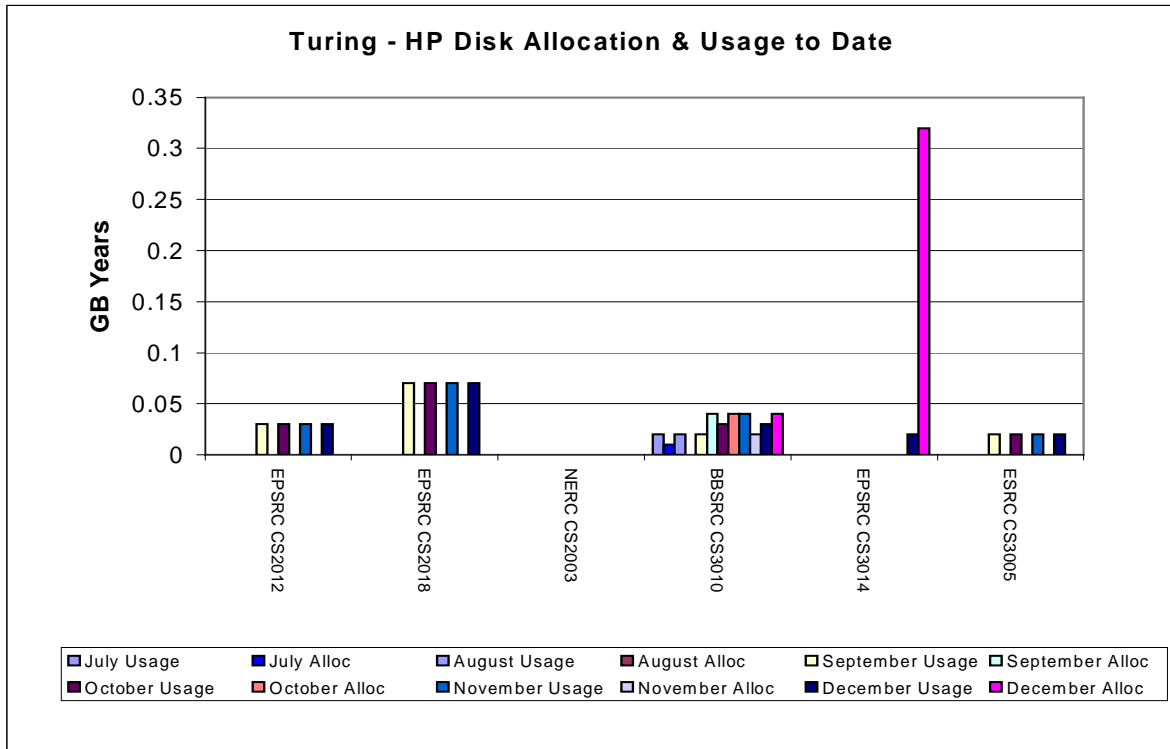

Turing PE usage is shown by Research Council during the past 12 months of service in the above chart.

Origin 2000 CPU usage is shown by Research Council during the past 12 months of service in the above chart.

### 4.7 Class 2 & 3 Usage Charts

The next series of charts show the usage of the system by the class 2 & class 3 users. The usage is shown by project and identifies the Research Council of the individual projects.

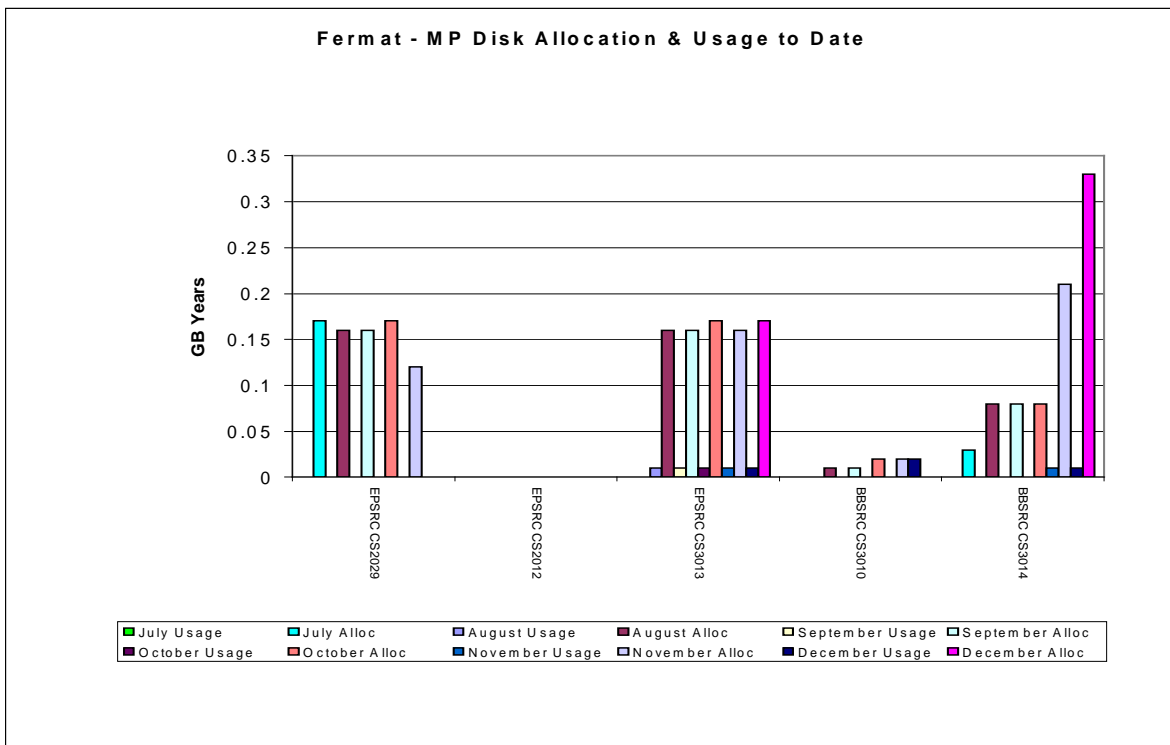

The above chart shows the most significant PE usage of the Turing system by class 2 and class 3 users.

The above chart shows the CPU usage of the Fermat system by class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Turing system for class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Fermat system for class 2 and class 3 users. There is currently no HSM usage by class 2 and class 3 users.

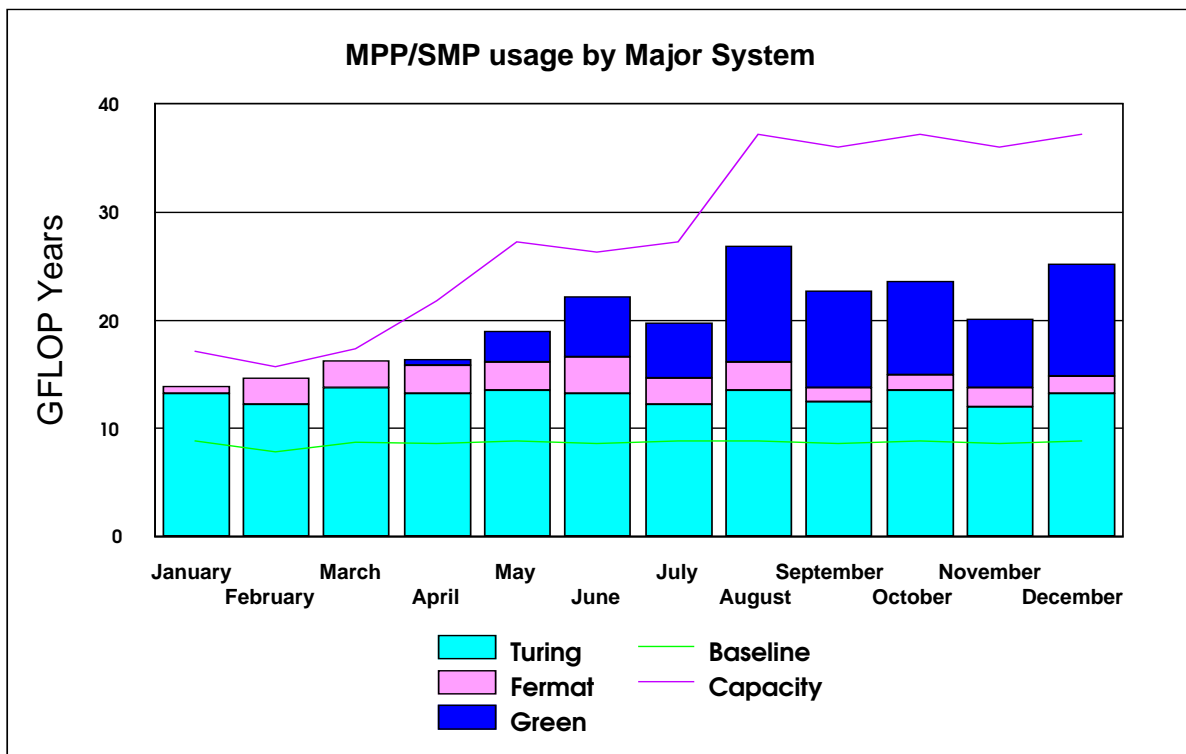

### 4.8 Charts of Historical Usage

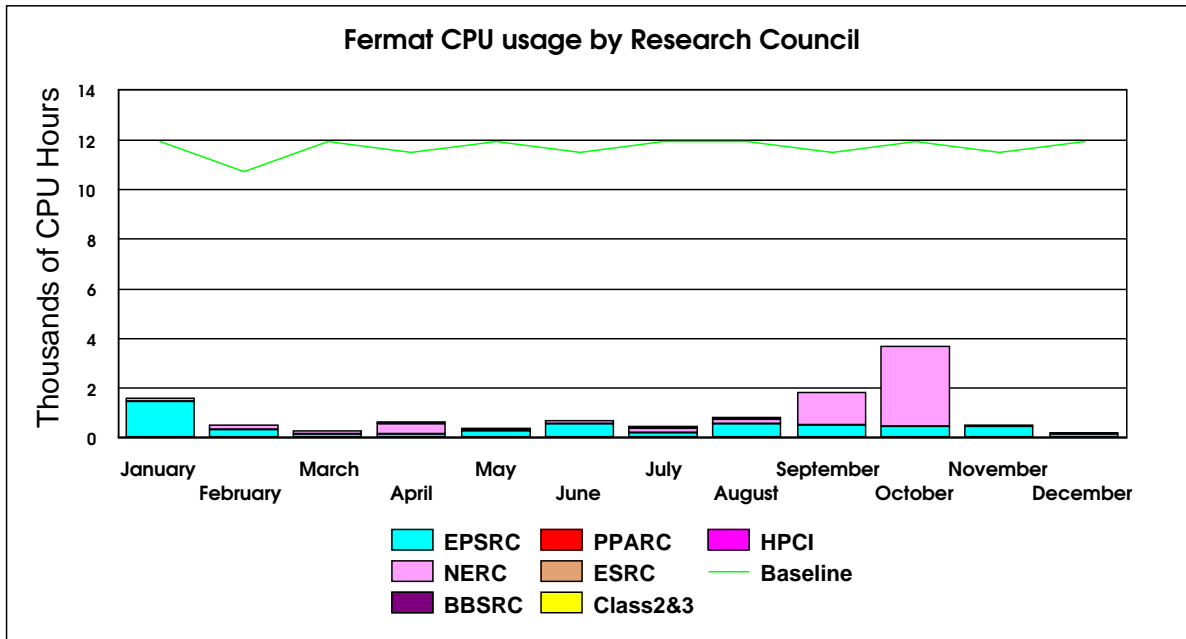

In all the Usage Charts, the baseline varies dependant on the number of days in each month, within a 365-day year.

The graph below shows the GFLOP Year utilisation on Turing and Fermat by Research Council for the previous 12 months; usage in July being reduced due to the outage for the major Green system upgrade.

The graph below shows the historic SMP/MPP usage on the major systems, with the upgrades to Fermat showing in January 2001 and Green showing in April to December 2001.

The above graph shows the historic interactive usage of the 'Baseline' Fermat system (equivalent to 16@250Mhz CPU's)

The next series of graphs illustrates the usage of the disk and HSM resources of the system.

The preceding graph illustrates the historic allocation of the High Performance Disk on Turing, which has now reached the Baseline level.

The graph above illustrates the historic allocation of the Medium Performance Disk on Fermat, which is now beginning to grow more rapidly with the growth in usage of both Fermat and Green.

The graph below shows the historic HSM usage by Research Council funded projects, now close to Baseline. The primary usage is for NERC.

The next chart shows the historic usage of the Fuji system.

The Fujitsu system usage was below baseline this month; however there was some Class 2/3 usage this month by CS2032 (Vekstein).

#### **4.8 Guest System Usage Charts**

There is currently no Guest System usage.

### **5. Service Status, Issues and Plans**

#### **5.1 Status**

The service continues to run almost at full capacity.

During the month, 91% of the jobs run on Turing were larger than 64 PEs in size.

During the month, 87% of the jobs run on Green were larger than 64 PEs in size.

#### **5.2 Issues**

The new drives have now completed their tests and the migration of data away from the Redwood drives has commenced.

#### **5.3 Plans**

Green underwent acceptance testing in December prior to the system becoming the technology refresh machine..

### **6. Conclusion**

December 2001 saw the overall CPARS rating at Green with the baseline being exceeded by 53%.

The largest proportion of the workload, on the major systems (Turing & Green), continues to be of the larger job sizes the largest shift in this area was in the range of 128 and above.

Continued management attention will be given to maximise the throughput of the Service, whilst balancing as fairly as practicable the shares between Projects and jobs of the varying sizes.

**Appendix 1** contains the accounts for December 2001

**Appendix 2** contains the Percentage shares by Consortium for December 2001

**Appendix 3** contains the Percentage shares by Research Council for December 2001

**Appendix 4** contains the Training, Applications and Optimisation support figures to the end of December 2001

**Appendix 5** contains a breakdown of resource usage by Consortia to the end of December 2001.

**Appendix 6** contains a reference table of the Consortia name, the subject area and the PI name.

**Appendix 1**

The summary accounts for the month of December 2001 can be found at the URL below

## Appendix 6

Code	PI	Subject	Subject Area
Cse002	Dr Nicolas Harrison (Gillan)	Support for the UKCP	Physics
Cse003	Prof. Ken Taylor	HPC Consortiums 98- 2000	Physics
Cse004	Dr Neil Sandham	UK Turbulence	Engineering
Cse006	Dr Patrick Briddon	Covalently Bonded Materials	Materials
Cse007	Dr Matthew Foulkes	Quantum Many Body Theory	Physics
Cse008	Dr Mark Vincent (Hillier)	Model Chemical Reactivity	Chemistry
Cse009	Dr Ben Slater (Catlow)	HPC in Materials Chemistry	Chemistry
Cse010	Dr John Williams	Free Surface Flows	Engineering
Cse011	Dr John Williams	Open Channel Flood Plains	Engineering
Cse013	Dr David Aspley (Leschziner)	Complex Engineering Flows	Engineering
Cse014	Dr Cassiano de Oliverira (Goddard)	Probs in Nuclear Safety	Engineering
Cse016	Dr Stewart Cant	Turbulent Combustion	Engineering
Cse018	Dr Stewart Cant	Turbulent Flames	Engineering
Cse019	Dr Jason Lander (Berzins)	ROPA	Information Technology
Cse020	Dr Marek Szularz	Symmetric Eigenproblem	Information Technology
Cse021	Dr Julie Staunton	Magentisim	Physics
Cse022	Mr Niall Branley (Jones)	Turbulent Flames	Engineering
Cse023	Allen	Liquid Crystalline Materials	Robin Pinning
Cse024	Dr Robert Allan (Tennyson)	ChemReact 98-2000	Chemistry
Cse025	Dr Niels Rene Walet (Bishop)	Nuclear Theory Progamme	Physics
Cse026	Dr Maureen Neal	J90 move	
Cse027	Dr M Imregun	J90 move	
Cse028	Prof. P.W. Bearman	J90 move	
Cse029	Dr David Aspley (Leschziner)	J90 move	Engineering
Cse030	Prof M Cates	HPC for Complex Fluids	Physics
Cse031	Brebbia	J90 move	
Cse033	Dr M Imregun	Tubomachinery core compressor	Chemistry
Cse034	Dr Paul Durham	R&D of liner/non-linear systems	Mathematics
Csn001	Mrs Beverly de Cuevas (Webb)	HPCI Global Ocean Consortium	
Csn002	Dr Mark Vincent (Hillier)	Pollutant Sorption on Mineral Surf	
Csn003	Dr Lois Steenman-Clark (O'Neill)	UGAMP	
Csn005	Dr Huw Davies	Constraining Earth Mantle	
Csn006	Dr John Brodholt (Price)	Density Functional Methods	
Csn007	Dr John Brodholt (Price)	Density Functional Methods	
Csn008	Hulton	Sub-Glacial Process	
Csn009	Dr Roger Proctor		
Csn010	Dr Jason Lander (Mobbs)	Flow over Complex terrain	
Csn011	Dr Ed Dicks (Thorpe)	J90 move	
Csb001	Dr David Houldershaw (Goodfellow)	Macromolecular Interactions	
Csb002	Dr Adrian Mulholland (Danson)	Stability of Enzymes at high temp	
Csb003	Dr John Carling (Williams)	J90 move	
Css001	Dr Stan Openhaw	Human Systems Modelling	
Css002	Dr Robert Crouchley	Dropout in panel surveys	
Hpcid	Dr Robert Allan		
Hpcie	Dr David Henty		
Hpcis	Dr Denis Nicole		
Cs2001	Dr Sudhir Jain	3D Ising Spin Glass	
Cs2002	Dr Ingrid Stairs (Lyne)	Millisecond Pulsars	
Cs2003	Mr Tom Coulthard	Holocene Sediment Fluxes	
Cs2004	Dr A. Paul Watkins	Internal Combustion Engine	
Cs2005	Mr Sean Walsh	Arabidopsis Genome	
Cs2006	Prof. Walter Temmerman	Superconductivity & Magmetisim	
Cs2007	Choularton	Precipitation in the Mountains	
Cs2008	Dr Matthew Genge	Extraterrestrial Mineral Surfaces	
Cs3001	Mr John Andrew Staveley	Helical Coherent Structures
