

# CSAR Service - Management Report

## September 2003

This report documents the quality of the CSAR service during the month of September 2003.

A more comprehensive report is provided quarterly, which additionally covers wider aspects of the Service such as information on Training, Application Support and Value-Added services.

This and other such reports are made available through the Web to staff within EPSRC and the other Research Councils, to CfS staff and CSAR Service users. The reports are indexed in a similar way to that which other useful information and news are listed for selection.

### 1. Introduction

This document gives information on Service Quality and on actual usage of the CSAR Service during the reporting period of September 2003. The information, in particular, covers the availability and usage of the main CSAR Service High Performance Computing (HPC) systems:

- Cray T3E-1200E/776 (Turing)
- SGI Origin2000/128 (Fermat)
- SGI Origin3000/512 (Green)
- SGI Origin300/16 (Wren)

The information is provided in both textual and graphical form, so that it is easier to see trends and variances.

September has seen the workload of the three primary systems at variable levels.

The CSAR Service has been granted an 18 month extension of service contract until June 30<sup>th</sup> 2006. With this extension CfS is implementing a further technology refresh which introduces a 256 processor Itanium-2 (Madison) based SGI Altix 'Newton' by the beginning of October 2003.

## 2. Service Quality

This section covers overall Customer Performance Assessment Ratings (CPARS), HPC System availability and usage, Service Quality Tokens and other information concerning issues, progress and plans for the CSAR Service.

### 2.1 CPARS

Table 1 gives the measure by which the quality of the CSAR Service is judged. It identifies the metrics and performance targets, with colour coding so that different levels of achievement against targets can be readily identified. Unsatisfactory actual performance will trigger corrective action.

**CSAR Service - Service Quality Report - Performance Targets**

| Service Quality Measure  | Performance Targets |         |         |         |        |             |
|--|---------------------|---------|---------|---------|--------|-------------|
|  | White               | Blue    | Green   | Yellow  | Orange | Red         |
| <b>HPC Services Availability</b>                                   |                     |         |         |         |        |             |
| Availability in Core Time (% of time)                              | > 99.9%             | > 99.5% | > 99.2% | > 98.5% | > 95%  | 95% or less |
| Availability out of Core Time (% of time)                          | > 99.8%             | > 99.5% | > 99.2% | > 98.5% | > 95%  | 95% or less |
| Number of Failures in month  | 0                   | 1       | 2 to 3  | 4       | 5      | > 5         |
| Mean Time between failures in 52 week rolling period (hours)       | >750                | >500    | >300    | >200    | >150   | otherwise   |
| <b>Help Desk</b>   |                     |         |         |         |        |             |
| Non In-depth Queries - Max Time to resolve 50% of all queries      | < 1/4               | < 1/2   | < 1     | < 2     | < 4    | 4 or more   |
| Non In-depth Queries - Max Time to resolve 95% of all queries      | < 1/2               | < 1     | < 2     | < 3     | < 5    | 5 or more   |
| Administrative Queries - Max Time to resolve 95% of all queries    | < 1/2               | < 1     | < 2     | < 3     | < 5    | 5 or more   |
| Help Desk Telephone - % of calls answered within 2 minutes         | >98%                | > 95%   | > 90%   | > 85%   | > 80%  | 80% or less |
| <b>Others</b>  |                     |         |         |         |        |             |
| Normal Media Exchange Requests - average response time             | < 1/2               | < 1     | < 2     | < 3     | < 5    | 5 or more   |
| New User Registration Time (working days)                          | < 1/2               | < 1     | < 2     | < 3     | < 4    | otherwise   |
| Management Report Delivery Times (working days)                    | < 1                 | < 5     | < 10    | < 12    | < 15   | otherwise   |
| System Maintenance - no. of sessions taken per system in the month | 0                   | 1       | 2       | 3       | 4      | otherwise   |

**Table 1**

Table 2 gives actual performance information for the period of September 1<sup>st</sup> to 30th inclusive. Overall, the CPARS Performance Achievement in September was satisfactory (see Table 3); i.e. Green measured against the CPARS performance targets.

**CSAR Service - Service Quality Report - Actual Performance Achievement**

| Service Quality Measure  | 2002/3 |        |        |        |         |        |        |        |        |        |        |        |
|--|--------|--------|--------|--------|---------|--------|--------|--------|--------|--------|--------|--------|
|  | Oct    | Nov    | Dec    | Jan    | Feb     | March  | April  | May    | June   | July   | Aug    | Sept   |

| <b>Help Desk</b>   |        |        |        |        |         |        |        |        |        |        |        |        |
| Non In-depth Queries - Max Time to resolve 50% of all queries      | <0.25  | <0.25  | <0.25  | <0.25  | <0.25   | <0.25  | <0.25  | <0.25  | <0.25  | <0.25  | <0.25  | <0.25  |
| Non In-depth Queries - Max Time to resolve 95% of all queries      | <2     | <2     | <2     | <0.5   | <1      | <2     | <3     | <1     | <2     | <1     | <0.5   | <5     |
| Administrative Queries - Max Time to resolve 95% of all queries    | <0.5   | <0.5   | <0.5   | <1     | <0.5    | <1     | <0.5   | <0.5   | <0.5   | <0.5   | <1     | <1     |
| Help Desk Telephone - % of calls answered within 2 minutes         | 100%   | 100%   | 100%   | 100%   | 100%    | 100%   | 100%   | 100%   | 100%   | 100%   | 100%   | 100%   |
| <b>Others</b>  |        |        |        |        |         |        |        |        |        |        |        |        |
| Normal Media Exchange Requests - average response time             | <0.5   | <0.5   | <0.5   | <0.5   | <0.5    | <0.5   | <0.5   | <0.5   | <0.5   | <0.5   | <0.5   | <0.5   |
| New User Registration Time (working days)                          | 0      | 0      | 0      | 0      | 0       | 0      | 0      | 0      | 0      | 0      | 0      | 0      |
| Management Report Delivery Times (working days)                    | 10     | 10     | 10     | 10     | 10      | 10     | 10     | 10     | 10     | 10     | 10     | 10     |
| System Maintenance - no. of sessions taken per system in the month | 2      | 2      | 2      | 2      | 2       | 2      | 2      | 2      | 2      | 2      | 2      | 2      |

**Table 2**

Notes:

- HPC Services Availability has been calculated using the following formulae, based on the relative NPB performance of Turing, Fermat and Green at installation:  

$$\text{Turing availability} \times 143 / (143 + 40 + 233) + [\text{Fermat availability} \times 40 / (143 + 40 + 233) + \text{Green availability} \times 233 / (143 + 40 + 233)]$$
- Mean Time between failures for Service Credits is formally calculated based on a rolling 12 month period.

**CSAR Service - Service Quality Report - Service Credit Ratings**

| Service Quality Measure  | 2002/3 |        |        |        |        |        |        |        |        |        |        |        |
|--|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|

| Help Desk Telephone - % of calls answered within 2 minutes         | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   |
| <b>Others</b>  |        |        |        |        |        |        |        |        |        |        |        |        |
| Normal Media Exchange Requests - average response time             | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   |
| New User Registration Time (working days)                          | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   | -0.1   |
| Management Report Delivery Times (working days)                    | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      |
| System Maintenance - no. of sessions taken per system in the month | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      | 0      |

Table 3 gives Service Credit values for the month of September. These will be accounted on a quarterly basis, formally from the Go-Live Date. The values are calculated according to agreed Service Credit Ratings and Weightings.

**Table 3**

## 2.2 Service Quality Tokens

The position at the end of September 2003 is that none of the 565 users have awarded any tokens to the service.

The graph above shows the total number of registered users on the CSAR Service and the number of users holding a neutral view of the service.

The graph below illustrates the monthly usage trend of quality tokens:

The current status of the Stendahl tokens is that there are no black marks or gold stars allocated to the service.

## 2.3 Throughput Target against Baseline

The baseline is shown in GFLOP-Years for consistency with the other information contained within this report.

The Baseline Target for throughput was achieved this month. The actual usage figure was 160.6% of Baseline capacity.

### Job Throughput Against Baseline CSAR Service Provision

Period: 1st to 30th September 2003

|  | Baseline Capacity for Period (GFLOP Years)          | Actual Usage in Period (GFLOP Years)                      | Actual % Utilisation c/w Baseline during Period                        |
|--|---|---|--|
| 1. Has CfS failed to deliver Baseline MPP Computing Capacity for EPSRC?              | 11.78   | 18.91   | 160.6%   |
|  | Baseline Capacity for Period (GFLOP Years)          | Job Time Demands in Period                                | Job Demand above 110% of Baseline during Period (Yes/No)?              |
| 2. Have Users submitted work demanding > 110% of the Baseline during period?         | 11.78   | 21.6  | Yes  |
|  |   | Number of Jobs at least 4 days old at end Period          | Number of Jobs at least 4 days old at end Period is not zero (Yes/No)? |
| 3. Are there User Jobs outstanding at the end of the period over 4 days old?         |   | 3   | Yes  |
|  |   | Minimum Job Time Demands as % of Baseline during Period   | Minimum Job Time Demand above 90% of Baseline during Period (Yes/No)?  |
| 4. Have Users submitted work demands above 90% of the Baseline during period?        |   | 79%   | No   |
|  | Number of standard Job Queues (ignoring priorities) | Average % of time each queue contained jobs in the Period | Average % of time each queue contained jobs in the Period is > 97%?    |
| 5. Majority of Job Queues contained jobs from Users for more than 97% during period? | 4   | 89%   | No   |

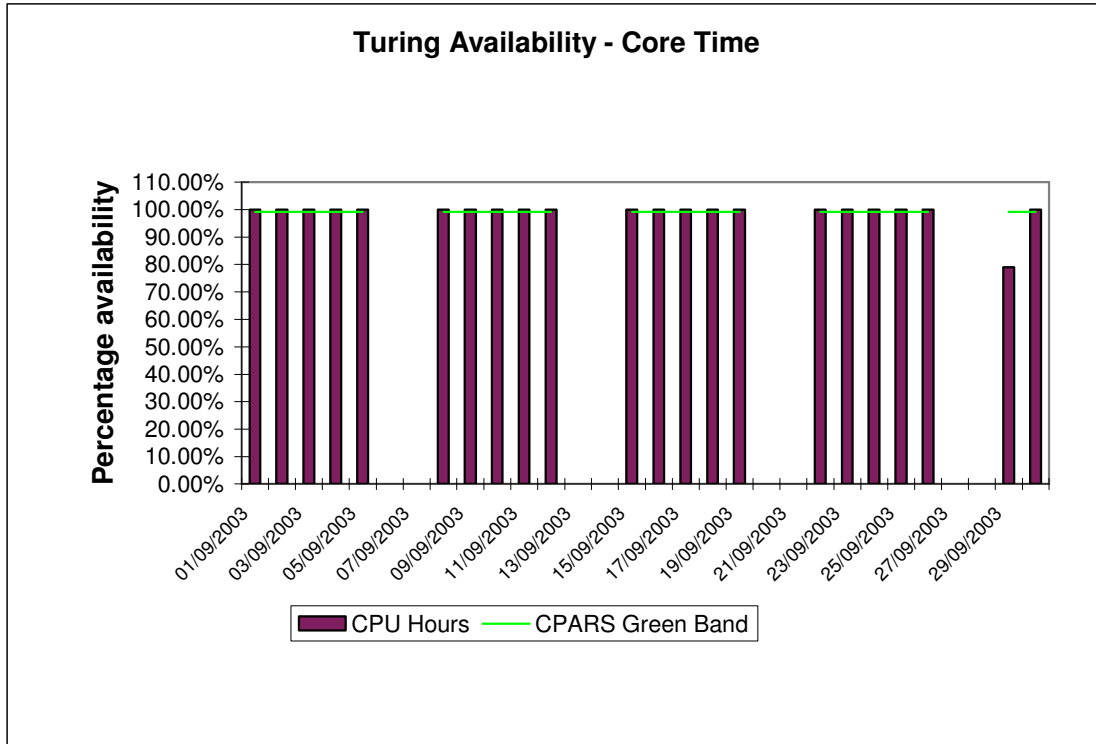

### 3. System Availability

Service availability each reporting period is calculated as a percentage of actual availability time over theoretical maximum time, after accounting for planned breaks in service for preventative maintenance.

#### 3.1 Cray T3E-1200E System (Turing)

The following graphs show the availability of Turing both in core time and out of core time respectively during the period of 1<sup>st</sup> to 30th September.

Turing availability for September:

Availability of Turing in core time during September was good with one outage, caused by a power supply failure.

Availability of Turing out of core time during September was not satisfactory. There were three outages, all of which were caused by hardware failures.

### 3.2 SGI Origin2000 System (Fermat)

The following graphs show the availability of Fermat both in core time and out of core time respectively.

Availability of Fermat in core time during September was acceptable, with two outages.

Availability of Fermat out of core time during September was very good, with one short outage.

### 3.3 SGI Origin3000 System (Green)

The following graphs show the availability of Green both in core time and out of core time respectively.

Availability of Green in core time during September was unacceptable, with three outages caused by CXFS related software issues. These issues have now been identified and are to be rectified by the application of a software patch.

Availability of Green out of core time during September was acceptable, with three outages.

## 4. HPC Services Usage

Usage information is given in tabular form, in Appendices, and in graphical format. The system usage information for the period of September 1<sup>st</sup> to 30th is provided by Project/User Group, totalled by Research Council and overall. This covers:

|                        |                     |                     |
|------------------------|---------------------|---------------------|
| • CPU usage            | Turing:             | 449,180 PE Hours    |
|                        | Fermat:             | 15,151.86 CPU Hours |
|                        | Wren (Batch):       | 0.19 CPU Hours      |
|                        | Wren (Interactive): | 1,582.92 CPU Hours  |
| • User Disk allocation | Green:              | 143,254 CPU Hours   |
|                        | Turing:             | 62.17 GB Years      |
|                        | Fermat:             | 107.29 GB Years     |
| • HSM/tape usage       | SAN HV:             | 24.66 GB Years      |
|                        |                     | 4,343.35 GB Years   |

In addition, the following graphs are provided to illustrate usage per month, historically:

- MPP/SMP (T3E/Origin) Usage by month, showing usage each month of CPU (GFLOP-Years as per NPB), split by Research Council and by system. The overall Capacity are shown by overlaid horizontal lines.
- SMP (Origin) Usage by month, showing usage each month in CPU Hours, split by Research Council and giving the equivalent GFLOP-Years as per NPB. The Baseline and overall Capacity are shown by overlaid horizontal lines.
- High Performance Disk (T3E) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1 Terabyte) is shown by an overlaid horizontal line.
- Medium Performance Disk (Origin) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1.5 Terabytes) is shown by an overlaid horizontal line.
- HSM/Tape Usage (T3E) by month, showing the volumes held each in GBytes, split by Research Council. The Baseline Capacity (16 Terabytes) available will be shown by an overlaid horizontal line.

### 4.1 Cray T3E-1200E System (Turing)

The following graph shows the usage of Turing during each day of September 2003. Note that there is some variance on a day-to-day basis as the accounts record job times, and thus CPU usage figures, at the time of job completion which could be the second actual day for large jobs. At present, there is a 24 hour limit on jobs so that they are check-pointed, and computational time lost due to any failure is well managed. Higher limits can be set for individual jobs on request.

Turing usage for September:

The above usage graph for the Turing system shows that Turing was reasonably utilised during September.

Fine tuning of the CfS scheduling system will continue to ensure minimal wasting of PE resource, in order to fit in a number of different sized jobs (e.g. 32, 64, 128, 256) thus facilitating maximised job throughput.

In particular, Turing will continue to start large jobs above 256 PEs, including 512 PEs, when they are queued subject to the overall workload.

### 4.2 SGI Origin2000 System (Fermat)

The usage of the Origin system was low. The groups most heavily using the Fermat system are, CSN001 (De Cuevas), CSE061 (Imregun), and CSN003 (Steenman-Clark).

The above graph shows the variable utilisation of the Origin 128. As interactive usage was removed from Fermat at the beginning of March, Fermat is now a dedicated batch system.

### 4.3 SGI Origin300 System (Wren)

The above graph shows the utilisation of the SGI system Wren for the month of September. Wren has taken over from Fermat as the interactive machine. A runaway process which had been running since 10<sup>th</sup> August was responsible for the peak on September 9<sup>th</sup> when it was terminated.

#### 4.4 SGI Origin3000 System (Green)

The above graph shows the utilisation of Green for the month of September, which was below Baseline.

#### 4.5 Disk/HSM Usage Chart

The graphs below show current disk and HSM allocations and usage.

The above graph shows actual usage on average against the current allocation of disk on the Turing system.

Shown above is the disk allocation against usage on average of the disk on Fermat.

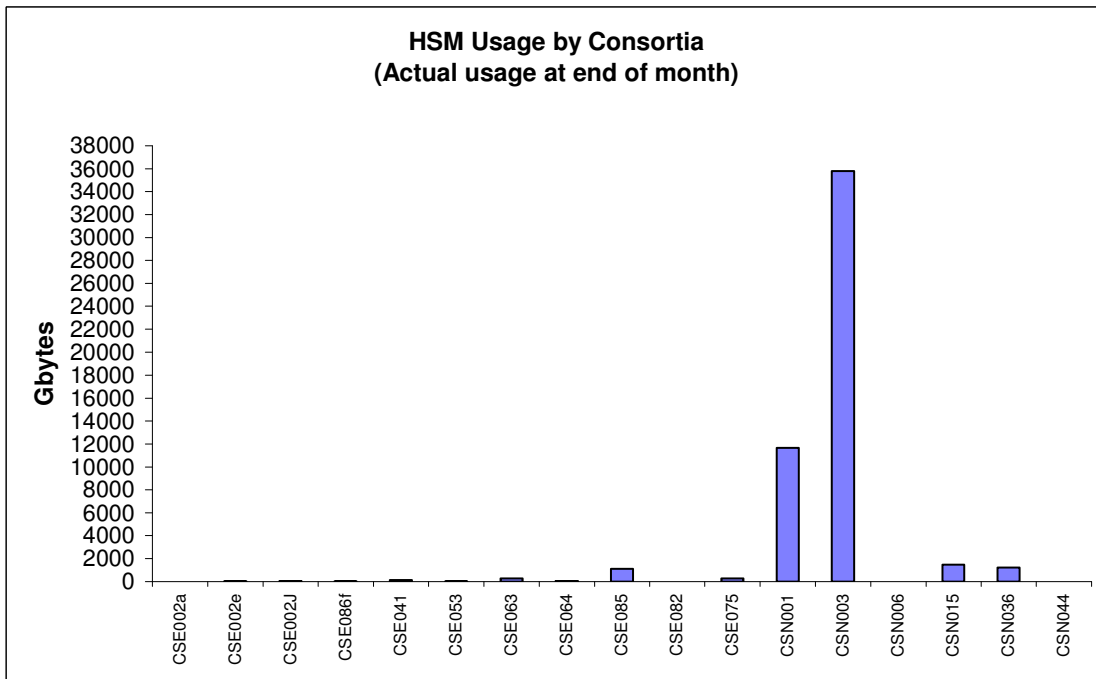

This graph shows the disk allocation against usage on average of the new SAN High Volume (HV) disk.

The above graph shows the total usage of the HSM facility by Research Council.

The next graph gives actual usage of HSM by Consortia.

CSE085 (Sandham), CSN001 (De Cuevas), CSN003 (Steenman-Clark), CSN015 (Proctor) & CSN036 (Woolf) were the major users of HSM resource.

### 4.6 Processor Usage and Job Statistics Charts

Job statistics for Turing:

The above graph shows the number of jobs of the major sizes run in the period 1<sup>st</sup> to 30th September 2003.

Job statistics for Green:

The above graph shows the number of jobs of the major sizes run in the period 1<sup>st</sup> to 30th September 2003.

The next graph shows the wait times in hours on Turing for the major categories of jobs.

The chart above shows the average wait time trend on Turing over the last 12 months.

The next graph shows the wait times in hours on Green for the major categories of jobs:

The chart above shows the average wait time trend on Green for the last 12 month period.

The greatest workload on Turing for September was in the PE range >256 with 77% of the total usage.

The greatest percentage of workload on Green was in the 129 to 256 PE range at 71% of total usage.

The greatest proportion of work on Fermat for September was in the 17 to 32 PE range at 54% of the total usage.

Turing PE usage is shown by Research Council during the past 12 months of service in the above chart.

The above chart shows Green CPU usage by Research Council during the past 12 months of service.

Origin 2000 CPU usage is shown by Research Council during the past 12 months of service in the above chart.

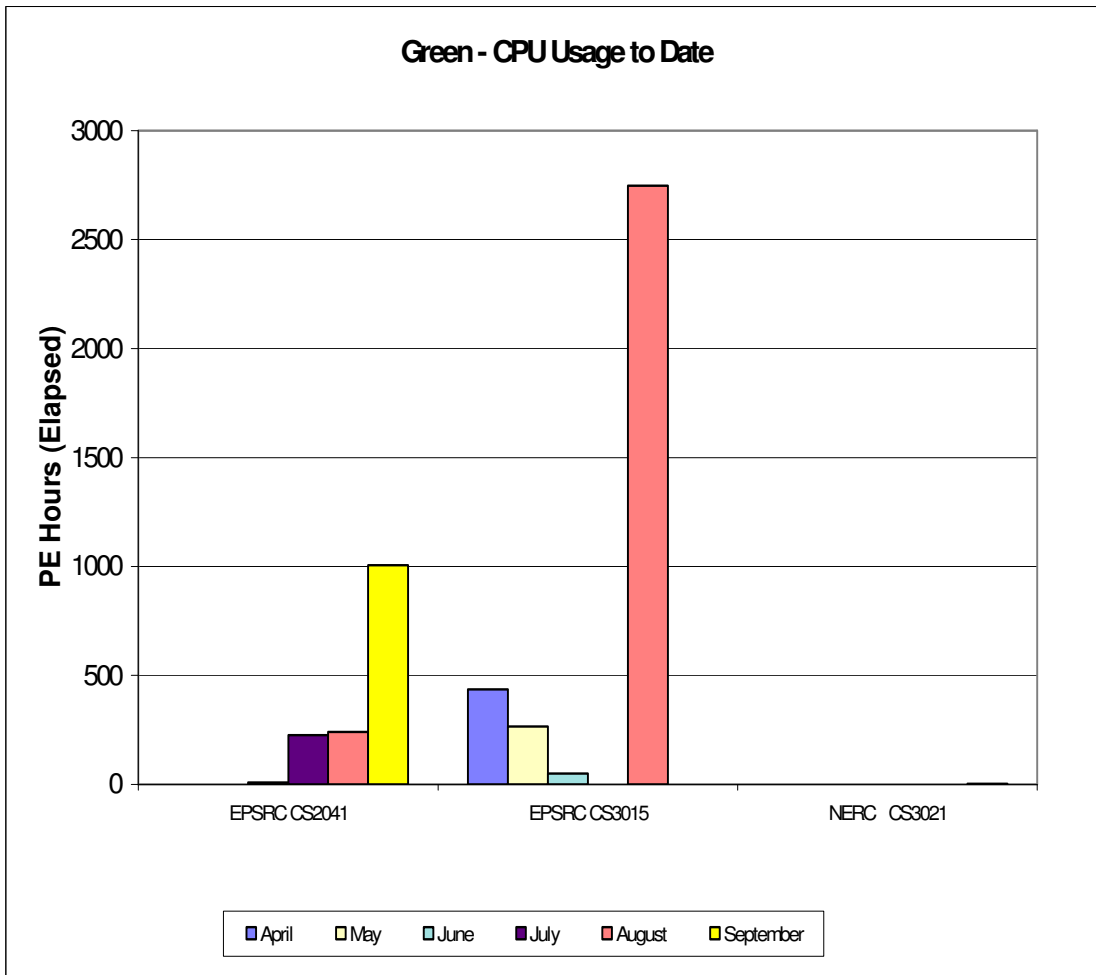

#### 4.7 Class 2 & 3 Usage Charts

The next series of charts show the usage of the system by the class 2 & class 3 users. The usage is shown by project and identifies the Research Council of the individual projects.

There is currently no PE usage of the Turing system by class 2 and class 3 users.

The above chart shows the CPU usage of the Fermat system by class 2 and class 3 users.

The above chart shows the CPU usage of Green by class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Turing system for class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Fermat system for class 2 and class 3 users. There is currently no HSM usage by class 2 and class 3 users.

### 4.9 Charts of Historical Usage

In all the Usage Charts, the baseline varies dependant on the number of days in each month, within a 365-day year.

The graph below shows the GFLOP Year utilisation on Turing and Fermat by Research Council for the previous 12 months.

The graph below shows the historic SMP/MPP usage on the major systems.

The above graph shows the historic interactive usage of the 'baseline' Fermat system (equivalent to 16@250Mhz CPUs) up to the end of February 2003, at which point the interactive usage was transferred to Wren and Fermat became a batch-only system. Eight of the higher speed 500Mhz CPUs in the Origin 300 system (Wren) deliver the baseline capacity equivalent to that which was previously available on Fermat for interactive usage.

The next series of graphs illustrates the usage of the disk and HSM resources of the system.

The preceding graph illustrates the historic allocation of the High Performance Disk on Turing.

The graph above illustrates the historic allocation of the Medium Performance Disk on Fermat.

The graph below shows the historic HSM usage by Research Council funded projects, now above Baseline at 48 Terabytes. The primary usage is for NERC.

### 4.8 Guest System Usage Charts

There is currently no Guest System usage.

## 5. Capability Incentives

Capability incentives are already given on the T3E system Turing for jobs of 512 PEs and above. In July 2003 it was announced that discounts for capability jobs available on all CSAR systems had been approved to include the SGI Origin 3000 system (Green) and the forthcoming SGI Altix 3700 system (Newton).

These capability incentives were agreed with the Research Councils to encourage capability usage of the national supercomputers for greater scientific achievement, and offer the following discounts:

| System | No of Processors | Discount     |
|--------|------------------|--------------|
| newton | 192+ CPUs        | 15% discount |
| newton | 128+ CPUs        | 10% discount |
| green  | 384+ CPUs        | 15% discount |
| green  | 256+ CPUs        | 10% discount |
| turing | 512+ CPUs        | 10% discount |

Discounts are given in the form of refunded Service Tokens.

Changes in usage patterns will be monitored and, subject to reviews, CfS reserve the right to change the incentives at any future date.

The following table displays the capability incentive discounts granted for September.

| Service Tokens Refunded: September 2003 Usage |           |        |        |        |  |  |               |
|---|-----------|--------|--------|--------|--|--|---------------|
| System  | Consortia |        |        |        |  |  | Total         |
|   | cse086    | cse075 | csb005 | csn003 |  |  |               |
| <b>Turing</b> 512+ PEs                        | 347.38    |        |        |        |  |  | 347.38        |
| <b>Green</b> 256+ PEs                         |           |        | 132.63 | 7.62   |  |  | 140.25        |
| <b>Green</b> 384+ PEs                         |           |        |        |        |  |  | 0             |
| <b>Newton</b> 128+ PEs                        |           |        |        |        |  |  | 0             |
| <b>Newton</b> 192+ PEs                        |           |        |        |        |  |  | 0             |
| <b>Total Tokens</b>                           |           |        |        |        |  |  | <b>487.63</b> |

## **6. Service Status, Issues and Plans**

### **6.1 Status**

The service utilisation in September exceeded baseline.

During the month there was a balanced spread of work across all major systems.

### **6.2 Issues**

There are no issues to report for September.

### **6.3 Plans**

Newton, the new 256P SGI Altix 3700 Itanium-2 system which will become the flagship of the CSAR service, has now been delivered to the Manchester site. Assembly of the machine together with system configuration and acceptance testing took place throughout September paving the way for Newton to enter full service on 1st October.

## **7. Conclusion**

September 2003 saw the overall CPARS rating at Green with the baseline being exceeded by 34.4%.

Continued management attention will be given to maximise the throughput of the Service, whilst balancing as fairly as practicable the shares between Projects and jobs of the varying sizes.

**Appendix 1** contains the accounts for September 2003

**Appendix 2** contains the Percentage shares by Consortium for September 2003

**Appendix 3** contains the Percentage shares by Research Council for September 2003

**Appendix 4** contains the Training, Applications and Optimisation support figures to the end of September 2003

**Appendix 5** contains a breakdown of resource usage by Consortia to the end of September 2003.

**Appendix 6** contains a reference table of the Consortia name, the subject area and the PI name.

**Appendix 1**

The summary accounts for the month of September 2003 can be found at the URL below

<http://www.csar.cfs.ac.uk/admin/accounts/summary.shtml>
