

CSAR Service - Management Report

March 2004

This report documents the quality of the CSAR service during the month of March 2004.

A more comprehensive report is provided quarterly, which additionally covers wider aspects of the Service such as information on Training, Application Support and Value-Added services.

This and other such reports are made available through the Web to staff within EPSRC and the other Research Councils, to CfS staff and CSAR Service users. The reports are indexed in a similar way to that which other useful information and news are listed for selection.

1. Introduction

This document gives information on Service Quality and on actual usage of the CSAR Service during the reporting period of March 2004. The information, in particular, covers the availability and usage of the main CSAR Service High Performance Computing (HPC) systems:

- SGI Altix3700/256 (Newton)
- SGI Origin3000/512 (Green)
- SGI Origin2000/128 (Fermat)
- SGI Origin300/16 (Wren)

The information is provided in both textual and graphical form, so that it is easier to see trends and variances.

March has seen the workload of the three primary systems at variable levels, with the workload on the new Altix system increasing substantially this month in terms of the number of users.

The CSAR Service has been granted an 18 month extension of service contract until June 31st 2006. With this extension CfS has introduced a 256 processor Itanium-2 (Madison) based SGI Altix Newton.

The newly introduced SGI Altix3700 system Newton has seen a good increase in uptake of use, and growth of usage continued throughout March.

2. Service Quality

This section covers overall Customer Performance Assessment Ratings (CPARS), HPC System availability and usage, Service Quality Tokens and other information concerning issues, progress and plans for the CSAR Service.

2.1 CPARS

Table 1 gives the measure by which the quality of the CSAR Service is judged. It identifies the metrics and performance targets, with colour coding so that different levels of achievement against targets can be readily identified. Unsatisfactory actual performance will trigger corrective action.

Table 2

Notes:

- HPC Services Availability has been calculated using the following formula, based on the relative NPB performance of Fermat, Green and Newton at installation:

$$[\text{Fermat availability} \times 40 / (40+233+343)] + [\text{Green availability} \times 233 / (40+233+343)] + [\text{Newton availability} \times 343 / (40+233+343)]$$
- Mean Time between failures for Service Credits is formally calculated based on a rolling 12 month period.

Table 3 gives Service Credit values for the month of March. These will be accounted on a quarterly basis, formally from the Go-Live Date. The values are calculated according to agreed Service Credit Ratings and Weightings.

2.2 Service Quality Tokens

The position at the end of March 2004 is that none of the 429 users have awarded any tokens to the service.

The graph above shows the total number of registered users on the CSAR Service and the number of users holding a neutral view of the service. The current drop in numbers of users is partly due to the removal of the T3E Turing at the end of December, and a number of projects which have recently come to an end.

The graph below illustrates the monthly usage trend of quality tokens:

The current status of the Stendahl tokens is that there are no black marks or gold stars allocated to the service.

2.3 Throughput Target against Baseline

The baseline is shown in GFLOP-Years for consistency with the other information contained within this report.

The Baseline Target for throughput was achieved this month. The actual usage figure was 221.2% of Baseline capacity.

Job Throughput Against Baseline CSAR Service Provision

Period: 1st to 31st March 2004

	Baseline Capacity for Period (GFLOP Years)	Actual Usage in Period (GFLOP Years)	Actual % Utilisation c/w Baseline during Period
1. Has CIS failed to deliver Baseline MPP Computing Capacity for EPSRC?	15.37	34.00	221.2%
	Baseline Capacity for Period (GFLOP Years)	Job Time Demands in Period	Job Demand above 110% of Baseline during Period (Yes/No)?
2. Have Users submitted work demanding > 110% of the Baseline during period?	15.37	34.3	Yes
		Number of Jobs at least 4 days old at end Period	Number of Jobs at least 4 days old at end Period is not zero (Yes/No)?
3. Are there User Jobs outstanding at the end of the period over 4 days old?		3	Yes
		Minimum Job Time Demands as % of Baseline during Period	Minimum Job Time Demand above 90% of Baseline during Period (Yes/No)?
4. Have Users submitted work demands above 90% of the Baseline during period?		82%	No
	Number of standard Job Queues (ignoring priorities)	Average % of time each queue contained jobs in the Period	Average % of time each queue contained jobs in the Period is > 97%?
5. Majority of Job Queues contained jobs from Users for more than 97% during period?	4	87%	No

3. System Availability

Service availability each reporting period is calculated as a percentage of actual availability time over theoretical maximum time, after accounting for planned breaks in service for preventative maintenance.

3.1 SGI Origin2000 System (Fermat)

The following graphs show the availability of Fermat both in core time and out of core time respectively.

Availability of Fermat in core time during March was good, with two short outages.

Availability of Fermat out of core time during March was very good, with one outage on 19th.

3.2 SGI Origin3000 System (Green)

The following graphs show the availability of Green both in core time and out of core time respectively.

Availability of Green in core time during March was good, with one outage on 23rd.

Availability of Green out of core time during March was very good, with one outage on 23rd.

3.3 SGI Altix3700 System (Newton)

The following graphs show the availability of Newton both in core time and out of core time respectively.

Availability of Newton in core time during March was very good, with one outage on the 19th.

Availability of Newton out of core time during March was very good, with one short outage on 12th.

4. HPC Services Usage

Usage information is given in tabular form, in Appendices, and in graphical format. The system usage information for the period of March 1st to 31st is provided by Project/User Group, totalled by Research Council and overall. This covers:

• CPU usage	Newton:	107,013 CPU Hours
	Green:	306,834 CPU Hours
	Fermat:	42,734.07 CPU Hours
	Wren (Batch):	8.8 CPU Hours
	Wren (Interactive):	234.22 CPU Hours
• User Disk allocation	Fermat:	100.78 GB Years
	SAN HV:	29.73 GB Years
• HSM/tape usage		4,395.74 GB Years

In addition, the following graphs are provided to illustrate usage per month, historically:

- a) SMP (Altix/Origin) Usage by month, showing usage each month of CPU (GFLOP-Years as per NPB), split by Research Council and by system. The overall Capacities are shown by overlaid horizontal lines.
- b) SMP (Origin) Usage by month, showing usage each month in CPU Hours, split by Research Council and giving the equivalent GFLOP-Years as per NPB. The Baseline and overall Capacity are shown by overlaid horizontal lines.
- c) Medium Performance Disk (Origin) allocated for User Data by month, showing the allocated space each month in GBytes, split by Research Council. The Baseline Capacity (1.5 Terabytes) is shown by an overlaid horizontal line.
- d) HSM/Tape Usage by month, showing the volumes held each in GBytes, split by Research Council. The Baseline Capacity (16 Terabytes) available will be shown by an overlaid horizontal line.

4.1 SGI Origin2000 System (Fermat)

The usage of the Origin system was higher this month. The groups most heavily using the Fermat system are CSN001 (De Cuevas), CSN003 (Steenman-Clark) and CSN006 (Price).

The above graph shows the variable utilisation of the Origin 128, a dedicated batch system.

4.2 SGI Origin300 System (Wren)

The above graph shows the utilisation of the interactive system Wren for the month of March.

4.3 SGI Origin3000 System (Green)

The above graph shows the utilisation of Green for the month of March, which was above Baseline.

4.4 SGI Altix3700 System (Newton)

The following graph shows the daily usage during March for the Altix system Newton.

4.5 Disk/HSM Usage Chart

The graphs below show current disk and HSM allocations and usage.

Shown above is the disk allocation against usage on average of the disk on Fermat.

The following graph shows the disk allocation against usage on average of the SAN High Volume (HV) disk.

The above graph shows the total usage of the HSM facility by Research Council.

The next graph gives actual usage of HSM by Consortia.

CSE085 (Sandham), CSN001 (De Cuevas), CSN003 (Steenman-Clark), CSN015 (Proctor) & CSN036 (Woolf) were the major users of HSM resource.

4.6 Processor Usage and Job Statistics Charts

Job statistics for Newton:

The above graph shows the number of jobs of the major sizes run in the period 1st to 31st March 2004.

Job statistics for Green:

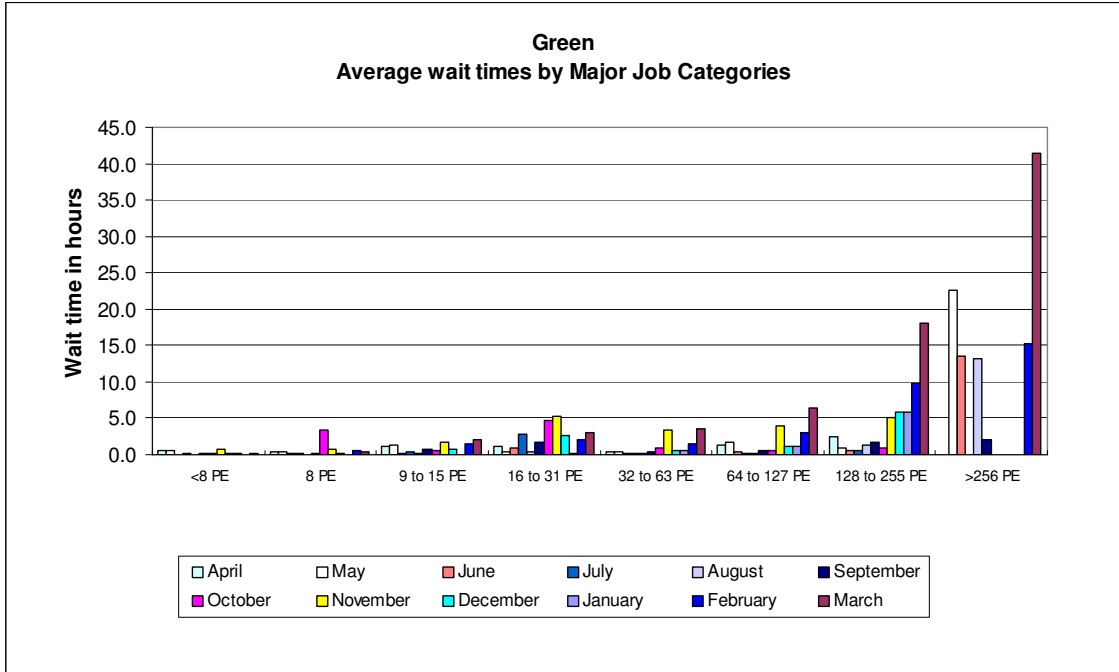

The above graph shows the number of jobs of the major sizes run in the period 1st to 31st March 2004.

The next graph shows the wait times in hours on Newton for the major categories of jobs, larger jobs requesting tiling across multiple nodes having to wait the longest times.

The chart above shows the average wait time trend on Newton so far this year.

The next graph shows the wait times in hours on Green for the major categories of jobs:

The chart above shows the average wait time trend on Green for the last 12 month period.

The greatest percentage of the workload on Green in March was in the 65 to 128 PE range, at 64%.

The workload on Ferret for March was relatively evenly spread across the mid-ranges of PEs.

March saw a good spread of work on the new Altix system Newton, with the highest concentration being in the 65 to 128 PE range.

The above chart shows Green CPU usage by Research Council during the past 12 months of service.

Origin 2000 CPU usage is shown by Research Council during the past 12 months of service in the above chart.

The following chart shows CPU usage to date of the new Altix 3700 Newton.

4.7 Class 2 & 3 Usage Charts

The next series of charts show the usage of the system by the class 2 & class 3 users. The usage is shown by project and identifies the Research Council of the individual projects.

There is currently no CPU usage of the Newton system by class 2 and class 3 users.

The above chart shows the CPU usage of the Fermat system by class 2 and class 3 users.

The above chart shows the CPU usage of Green by class 2 and class 3 users.

The above chart shows the most significant disk allocations on the Fermat system for class 2 and class 3 users. There is currently no HSM usage by class 2 and class 3 users.

4.9 Charts of Historical Usage

In all the Usage Charts, the baseline varies dependant on the number of days in each month, within a 365-day year.

The graph below shows the GFLOP Year utilisation by Research Council for the previous 12 months, showing the raise in baseline and capacity with the introduction of the new Altix system Newton and subsequent fall following the removal of the T3E system Turing early in January.

The graph below shows the historic SMP/MPP usage on the major systems.

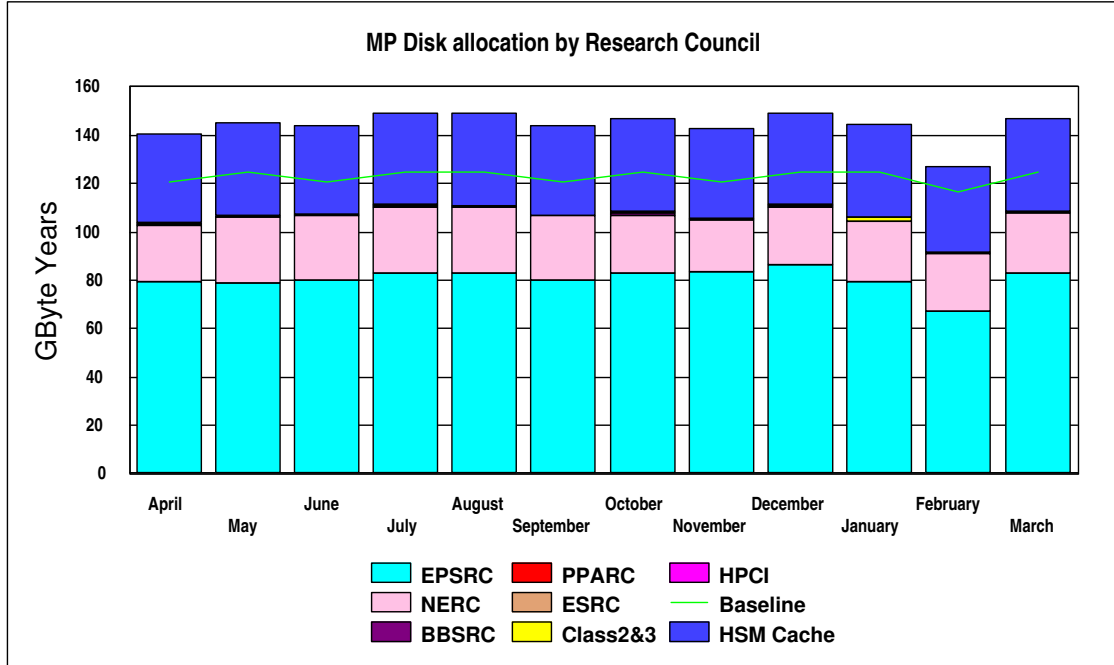

The above graph shows the historic interactive usage of the Origin 300 system (Wren). Eight of the higher speed 500Mhz CPUs in Wren deliver the baseline capacity equivalent to that which was previously available on the Origin 3000 system (Fermat) for interactive usage.

The graph below details the historic usage by Research Council of the Altix 3700 system (Newton), introduced into the service in October 2003.

The next series of graphs illustrates the usage of the disk and HSM resources of the system.

The graph above illustrates the historic allocation of the Medium Performance Disk on Fermat and the SAN.

The graph below shows the historic HSM usage by Research Council funded projects, now above Baseline at 48 Terabytes. The primary usage is for NERC.

4.8 Guest System Usage Charts

There is currently no Guest System usage.

5. Capability Incentives

Capability incentives were historically given on the T3E system Turing for jobs of 512 PEs and above. In July 2003 it was announced that discounts for capability jobs available on all CSAR systems had been approved to include the SGI Origin 3000 system (Green) and the new SGI Altix 3700 system (Newton).

These capability incentives were agreed with the Research Councils to encourage capability usage of the national supercomputers for greater scientific achievement, and offer the following discounts:

System	No of Processors	Discount
newton	192+ CPUs	15% discount
newton	128+ CPUs	10% discount
green	384+ CPUs	15% discount
green	256+ CPUs	10% discount

Discounts are given in the form of refunded Service Tokens.

Changes in usage patterns will be monitored and, subject to reviews, CfS reserve the right to change the incentives at any future date.

The following table displays the capability incentive discounts granted for March.

Service Tokens Refunded: March 2004 Usage							
System	Consortia						Total
	cse085	cse086					
Green 256+ PEs	33.8	14.6					48.4
Green 384+ PEs							0
Newton 128+ PEs	324.4						324.4
Newton 192+ PEs							0
Total Tokens							372.8

6. Service Status, Issues and Plans

6.1 Status

The service utilisation in March exceeded baseline.

During the month there was a balanced spread of work across all major systems.

6.2 Issues

There are no issues to report this month.

6.3 Plans

Encouraging results of codes ported over to the SGI Altix 3700 system Newton have been seen, and work continues on porting/optimising further codes.

7. Conclusion

March 2004 saw the overall CPARS rating at Green with the baseline being exceeded by 121%.

Continued management attention will be given to maximise the throughput of the Service, whilst balancing as fairly as practicable the shares between Projects and jobs of the varying sizes.
