CSAR Service - Management Report

August 2005

This report documents the quality of the CSAR service during the month of August 2005.

A more comprehensive report is provided quarterly, which additionally covers wider aspects of the Service such as information on Training, Application Support and Value-Added services.

This and other such reports are made available through the Web to staff within EPSRC and the other Research Councils, to CfS staff and CSAR Service users. The reports are indexed in a similar way to that which other useful information and news are listed for selection.

1. Introduction

This document gives information on Service Quality and on actual usage of the CSAR Service during the reporting period of August 2005. The information, in particular, covers the availability and usage of the main CSAR Service High Performance Computing (HPC) systems:

- ➢ SGI Altix3700/512 (Newton)
- SGI Origin3000/512 (Green)
- SGI Origin2000/128 (Fermat)
- SGI Origin300/16 (Wren)

The information is provided in both textual and graphical form, so that it is easier to see trends and variances.

August has seen the workload of the three primary systems at variable levels, with the workload on the Altix system Newton remaining steady.

The CSAR Service has been granted an 18 month extension of service contract until June 30th 2006.

2. Service Quality

This section covers overall Customer Performance Assessment Ratings (CPARS), HPC System availability and usage, Service Quality Tokens and other information concerning issues, progress and plans for the CSAR Service.

2.1 CPARS

<u>Table 1</u> gives the measure by which the quality of the CSAR Service is judged. It identifies the metrics and performance targets, with colour coding so that different levels of achievement against targets can be readily identified. Unsatisfactory actual performance will trigger corrective action.

Table 2

Notes:

1. HPC Services Availability has been calculated using the following formula, based on the relative NPB performance of Fermat, Green and Newton at installation:

[Fermat availability x 40/ (40+233+343)] + [Green availability x 233/(40+233+343)] + [Newton availability x 343/(40+233+343)]

2 Mean Time between failures for Service Credits is formally calculated based on a rolling 12 month period.

CfS

<u>Table 3</u> gives Service Credit values for the month of August. These will be accounted on a quarterly basis, formally from the Go-Live Date. The values are calculated according to agreed Service Credit Ratings and Weightings.

5. Capability Incentives

Capability incentives were historically given on the T3E system Turing for jobs of 512 PEs and above. In August 2003 it was announced that discounts for capability jobs available on all CSAR systems had been aproved to include the SGI Origin 3000 system (Green) and the SGI Altix 3700 system (Newton).

These capability incentives were agreed with the Research Councils to encourage capability usage of the national supercomputers for greater scientific achievement, and offer the following discounts:

| System | No of Processors | Discount |
|--------|------------------|--------------|
| newton | 192+ CPUs | 15% discount |
| newton | 128+ CPUs | 10% discount |
| green | 384+ CPUs | 15% discount |
| green | 256+ CPUs | 10% discount |

Discounts are given in the form of refunded Service Tokens.

Changes in usage patterns will be monitored and, subject to reviews, CfS reserve the right to change the incentives at any future date.

6. Service Status, Issues and Plans

6.1 Status

The service utilisation in August exceeded baseline.

During the month there was a balanced spread of work across all major systems.

6.2 Issues

There were some issues with stability of the Newton system during August. These were tracked to a combination of a potential problem with a user code, along with some SAN response issues. Both problems are under investigation by the relevant support teams.

6.3 Plans

There are currently no plans to report for the CSAR service.

7. Conclusion

August 2005 saw the overall CPARS rating at Green with the baseline being exceeded by 99%.

Continued management attention will be given to maximise the throughput of the Service, whilst balancing as fairly as practicable the shares between Projects and jobs of the varying sizes.
