# **CSAR Service - Management Report**

# **June 2006**

This report documents the quality of the CSAR service during the final month of the service..

A more comprehensive report is provided quarterly, which additionally covers wider aspects of the Service such as information on Training, Application Support and Value-Added services.

This and other such reports are made available through the Web to staff within EPSRC and the other Research Councils, to CfS staff and CSAR Service users. The reports are indexed in a similar way to that which other useful information and news are listed for selection.

## 1. Introduction

This document gives information on Service Quality and on actual usage of the CSAR Service during the reporting period of June 2006. The information, in particular, covers the availability and usage of the main CSAR Service High Performance Computing (HPC) systems:

- SGI Altix3700/512 (Newton)
- SGI Origin3000/512 (Green)
- SGI Origin2000/128 (Fermat)
- SGI Origin300/16 (Wren)

The information is provided in both textual and graphical form, so that it is easier to see trends and variances.

This is the final month of the CSAR service for computational work. The CSAR Service ceased operation on Friday 30 June 2006 at the end of its current contract. For projects that run beyond this date, the Research Councils are responsible for providing access to alternative resources. All users who currently have accounts on the CSAR systems are responsible for transferring their data elsewhere. For further details refer to the "Closure of the CSAR Service" page on the CSAR website at <u>http://www.csar.cfs.ac.uk/user\_information/service\_end/</u>.

## 2. Service Quality

This section covers overall Customer Performance Assessment Ratings (CPARS), HPC System availability and usage, Service Quality Tokens and other information concerning issues, progress and plans for the CSAR Service.

### 2.1 CPARS

<u>Table 1</u> gives the measure by which the quality of the CSAR Service is judged. It identifies the metrics and performance targets, with colour coding so that different levels of achievement against targets can be readily identified. Unsatisfactory actual performance will trigger corrective action.

Table 2

Notes:

1. HPC Services Availability has been calculated using the following formula, based on the relative NPB performance of Fermat, Green and Newton at installation:

[Fermat availability x 40/ (40+233+343)] + [Green availability x 233/(40+233+343)] + [Newton availability x 343/(40+233+343)] + [Newton availability x 343/(40+23+343)] + [Newton availability x 343/(40+23+343)] + [Newton availability x 343/(40+23+343)] + [Newton availability x 343/

2 Mean Time between failures for Service Credits is formally calculated based on a rolling 12 month period.

CfS

<u>Table 3</u> gives Service Credit values for the month of June. These will be accounted on a quarterly basis, formally from the Go-Live Date. The values are calculated according to agreed Service Credit Ratings and Weightings.

# 5. Capability Incentives

Capability incentives were historically given on the T3E system Turing for jobs of 512 PEs and above. In June 2003 it was announced that discounts for capability jobs available on all CSAR systems had been approved to include the SGI Origin 3000 system (Green) and the SGI Altix 3700 system (Newton).

These capability incentives were agreed with the Research Councils to encourage capability usage of the national supercomputers for greater scientific achievement, and offer the following discounts:

System	No of Processors	Discount
newton	192+ CPUs	15% discount
newton	128+ CPUs	10% discount
green	384+ CPUs	15% discount
green	256+ CPUs	10% discount

Discounts are given in the form of refunded Service Tokens.

Due to the closure of the CSAR service on June 30<sup>th</sup>, there are no capability incentive discounts for this month.
